Publisher Description

Zoos and Tourism South Australia State Government Publications

This delightful book is the long-awaited, greatly-expanded new edition of one of Dr Karl Shuker's much-loved early volumes, *Extraordinary Animals Worldwide*. It is a fascinating celebration of what used to be called romantic natural history, examining a dazzling diversity of animal anomalies, creatures of cryptozoology, and all manner of other thought-provoking zoological revelations and continuing controversies down through the ages of wildlife discovery. Handsomely supplemented by a vista of enchanting Victorian engravings to evoke the spirit of the period from which the inspiration for this book is drawn, *Extraordinary Animals Revisited* offers an enthralling introduction to a veritable menagerie of truly astonishing beasts: From singing dogs to serpent kings, pseudo-plesiosaurs to quasi-octopuses, hounds with two noses and birds with four wings, the Sandwell Valleygator and New Mexico's medicine wolf, cobras that crow and snake gods that dance, giant solifugids and rodent colossi, devil-birds and devil-pigs, furry woodpeckers and marsupial hummingbirds, archangel feathers and the scales of the Eden serpent, scorpion-stones and elephant-pearls, tales of the peacock's tail, parachuting palm civets, missing megapodes, blue rhinoceroses, glutinous globsters, anomalous aardvarks, a platypus from Colorado, man-sized spiders from the Congo, de Loys's lost Venezuelan ape, Margate's marine elephant, a flying hedgehog called Tizzie-Wizzie, a mellifluous mollusc called Molly, India's once (and future?) pink-headed duck, the squeaking deathhead, the vanquished bird-god of New Caledonia, and much much more - all waiting to amaze and amuse, a pageant of natural and unnatural history.

Seen but Not Heard National Library of Australia

The field of primatology has expanded substantially in the last twenty years, particularly with regard to studies of primates in human-altered landscapes. This text aims to review the recent literature on anthropogenic (of human origin) influences on non-human primates, bringing an overview of this important area of primatology together for students. Chapters are grouped into three sections, representing the many ways anthropogenic activities affect primate populations. The first section, 'Human Influences on Primate Habitat', covers ways in which wild primates are affected by human actions, including forest fragmentation, climate change, and the presence of dogs. Section

two, 'Primates in Human-Dominated Landscapes', looks at situations where non-human primates and humans share space; this includes primates in urban environments, primate tourism, and primates in agroecosystems. The final section, 'Primates in Captivity', looks at primate behaviour and welfare in captive situations, including zoos, the primate pet trade, and in entertainment.

Gorilla Pathology and Health: With a Catalogue of Preserved Materials consists of two cross-referenced parts. The first, the book itself, is a review of pathological changes and tissue responses in gorillas (*Gorilla gorilla* and *G. beringei*), with an emphasis on free-living animals, but also with reference to those in captivity. The comparative aspects are discussed, stressing the relevance of research to both gorillas and humans. What makes the publication truly unique, however, is the second part, a comprehensive descriptive catalogue of the location and nature of gorilla material in museums and scientific institutions throughout the world. This is of great consequence because free-living gorillas are strictly conserved with restricted access, so the location of a wealth of preserved tissues and other material that has been collected over the decades is a great benefit for research and study. This book can, and should, be used to gain cardinal knowledge regarding the biology and pathology of this genus. The combination of book and catalogue in this extensive compilation makes it an invaluable tool for all those concerned with the health, welfare, and conservation of gorillas, one of our nearest living relatives. - Brings together studies, data, and clinical practice from difficult-to-access or obscure journals and NGO reports, in different languages, for all interested parties and practitioners - Provides perspectives on existing research in gorilla pathology, both for those studying conservation practices and those seeking an understanding of comparable diseases in humans - Includes illustrative figures on gross and microscopic pathological changes, museum specimens, photos of field necropsy and techniques, and examples of laboratory tests - Features an extensive list of references and further reading, in different languages - Incorporates a comprehensive, descriptive catalogue of gorilla material from around the world

Lilian Medland has not received until now the recognition she deserves as a painter of birds. Due to world events and circumstances, five important books on birds containing her superb illustrations were never published. Despite such major disappointments, she continued to devote her time and talent to painting, first the birds of the British Isles and, later, those of Australia, her adopted country, where she died in 1955. Even now, she is not mentioned in the Australian Dictionary of Biography in her own right, but only in the entry for her husband, ornithologist Tom Iredale. *Seen but Not Heard* is the first publication to shine a light on the life and work of this much-overlooked but brilliant Australian natural history artist. *The Semantics of Classificatory Verbs in Enga (and Other Papua New Guinea Languages)* New Holland Publishers (AU)
Zoo Animal Welfare thoroughly reviews the scientific literature on the welfare of zoo and aquarium animals. Maple and Perdue draw from the senior author's 24 years of experience as a zoo executive and international leader in the field of zoo biology. The authors' academic training in the interdisciplinary field of psychobiology provides a unique perspective for evaluating the ethics, practices, and standards of modern zoos and aquariums. The book offers a blueprint for the implementation of welfare measures and an objective rationale for their widespread use. Recognizing the great potential of zoos, the authors have written an inspirational book to guide the strategic vision of superior, welfare-oriented institutions. The authors speak directly to caretakers working on the front lines of zoo management, and to the decision-makers responsible for elevating the priority of animal welfare in their respective zoo. In great detail, Maple and Perdue demonstrate how zoos and aquariums can be designed to achieve optimal standards of welfare and wellness.

Catalogue of Audio-visual Materials Cambridge Scholars Publishing

An illustrated book which describes the history and development of zoos with special emphasis on the Melbourne Zoo. Includes a bibliography and index. The author has an interest in the evolution of 19th century institutions and previous publications include 'Foundation of the National Gallery of Ireland' and 'Zoos of Australia'.

Encyclopedia of the World's Zoos Springer Science & Business Media

Includes various departmental reports and reports of commissions. Cf. Gregory. Serial publications of foreign governments, 1815-1931.

Joint Volumes of Papers Presented to the Legislative Council and Legislative Assembly John Wiley & Sons

Vols. 1-7 and 16 include reports and proceedings of the Royal Zoological Society of New South Wales for 1913-1932/33 and 1969/70.

[The Zoo Story](#) BRILL

First Published in 2001. Routledge is an imprint of Taylor & Francis, an informa company.

[A World of Popular Entertainments](#) New Holland Publishers

This book is intended as an introductory text for students studying a wide range of courses concerned with animal management, zoo biology and wildlife conservation, and should also be useful to zookeepers and other zoo professionals. It is divided into three parts. Part 1 considers the function of zoos, their history, how zoos are managed, ethics, zoo legislation and wildlife conservation law. Part 2 discusses the design of zoos and zoo exhibits, animal nutrition, reproduction, animal behaviour (including enrichment and training), animal welfare, veterinary care, animal handling and transportation. Finally, Part 3 discusses captive breeding programmes, genetics, population biology, record keeping, and the educational role of zoos, including a consideration of visitor behaviour. It concludes with a discussion of the role of zoos in the conservation of species in the wild and in species reintroductions. This book takes an international perspective and includes a wide range of examples of the operation of zoos and breeding programmes particularly in the UK, Europe, North America and Australasia. Visit

www.wiley.com/go/rees/zoo to access the artwork from the book.

[Animal Geographies](#) Taylor & Francis

Each year, billions of animals are poisoned, dissected, displaced, killed for consumption, or held in captivity to be discarded as soon as their utility to humans has waned. The animal world has never been under greater peril. A broad-ranging collection of essays, this publication contributes to a re-thinking about humans' relation to animals.

This book illustrates how some best zoos in the world have evolved, by reference to the history of a few. It contains a list of names of the present and former professional staff of the Zoological Society of London.

[The Keepers and the Kept](#) Univ of California Press

Indexes the world's zoological and animal science literature, covering all research from biochemistry to veterinary medicine. The database provides a collection of references from over 4,500 international serial publications, plus books, meetings, reviews and other no- serial literature from over 100 countries. It is the oldest continuing database of animal biology, indexing literature published from 1864 to the present. Zoological Record has long been recognized as the "unofficial register" for taxonomy and systematics, but other topics in animal biology are also covered.

[International Market Analysis of Wildlife Tourism \[WT#22\]](#)

Andrews McMeel Publishing

Zoos are important and popular tourist attractions. Spread around the world, they are typically located in major cities, with visitation levels comparable to other major attractions. Nature-based attractions constructed in artificial settings, they face the challenge of trying to balance potentially conflicting aims of conservation, education and entertainment. The best are continually developing fresh and effective techniques on visitor interpretation and management, the worst highlight the manipulation of animals for human gratification. Taking a global approach, this book examines the problems and paradoxes of zoos as they try to balance their roles as visitor attractions while repositioning themselves as leading conservation agencies. "This book provides a detailed and critical examination of the conflicting roles and identities of the modern zoo from a tourism perspective and as such reminds us that zoos are as much about the people who visit them as about the animals that they display. At a time when they are under continual critical scrutiny, this book delivers a fresh approach to our understanding and appreciation of zoos and of the challenges and opportunities that they face as they strive to remain relevant within modern

society." Andrew Tribe, University of Queensland, Australia
[Live Animal Trade & Transport Magazine](#) Channel View Publications

Until the mid-20th century, the thylacine was the world's largest carnivorous marsupial, and its disappearance has left many questions and contradictions. Alternately portrayed as a scourge and as a high value commodity, the thylacine's ecology and behaviour were known only anecdotally. In recent years, its taxonomic position, ecology, behaviour and body size have all been re-examined scientifically, while advances in genetics have presented the potential for de-extinction. With 78 contributors, *Thylacine: The History, Ecology and Loss of the Tasmanian Tiger* presents an evidence-based profile of the thylacine, examining its ecology, evolution, encounters with humans, persecution, assumed extinction and its appearance in fiction. The final chapters explore the future for this iconic species – a symbol of extinction but also hope.

[Gorilla Pathology and Health](#) Routledge

Wild animal fathers are often seen merely as sperm donors with little contribution or influence on family affairs. This is indeed the case in plenty of species but many other wild animal dads have evolved to be significant and, in some instances, essential contributors to offspring survival. This book takes a close look at the role of animal dads in nature and what that may say about fatherhood in humans--giving insights into truly fascinating paternal behaviour in wild animals ranging from seahorses to monkeys and ostriches to penguins. Fatherhood is an oft-neglected subject compared to motherhood, yet many animal societies have evolved a major role for dads beyond the donation of sperm. There are myriad ways animals can become dads, involving different courtships styles to attract a female and mating systems from polygamy to monogamy and polyandry. Natural selection and mate choice also influence the potential of becoming a dad. When fatherhood is achieved, what is the role of pair bonding, fidelity, and male role models? These topics are explored with a wink to our own rituals and societal norms.
