Formal Ethics is the study of formal ethical principles. The most important of these, perhaps even the most important principle of life, is the golden rule: "Treat others as you want to be treated". Although the golden rule enjoys support amongst different cultures and religions in the world, philosophers tend to neglect it. Formal Ethics gives the rule the attention it deserves. Modelled on formal logic, Formal Ethics was inspired by the ethical theories of Kant and Hare. It shows that the basic formal principles of ethics, like the golden rule, are very similar to principles of logic, and

gives a firm basis for our ethical thinking. As an introduction to moral rationality, Formal Ethics also considers non-formal elements, and is applied to areas of practical concern such as racism and moral education

"Cripples ain't supposed to be happy" sings Anita Hollander, balancing on her single leg and grinning broadly. This moment--from her multi-award-winning one-woman show, *Still Standing*--captures the essence of this theatre anthology. Hollander and nineteen other playwright-performers craftily subvert and smash stereotypes about how those within the disability community should look, think, and behave. Utilizing the often-conflicting tools of Critical Disability Studies and Medical Humanities, these plays and their accompanying essays approach disability as a vast, intersectional demographic, which ties individuals together less by whatever impairment, difference, or non-normative condition they experience, and more by their daily need to navigate a world that wasn't built for them. From race, gender, and sexuality to education, dating, and pandemics, these plays reveal there is no aspect of human life that does not, in some way, intersect with disability.

Originally published in 1942, this title attempted to trace, from their very earliest appearances after birth, all aspects of mental development in childhood up to the age of about 4 or 5. It is based largely on the author's almost daily observations of his own five children, over a period of some twenty years, supplemented by numerous tests and experiments. The first purpose of this book was to advance our knowledge of the psychology of childhood. The importance of such knowledge had become increasingly recognised. Even if not all is completely determined in the first 4-5 years, there was little doubt by this time that these first years are of profound significance for future development: and the better understanding and training of the young child may be at the root of many of our educational and social problems.

Information and Communications Technology (ICT) is changing the face of education. In this timely and accessible book, Chris Abbott examines the process by which ICT, and in particular its role in relation to literacy, has become central to national educational policies. The author traces the history of computer use in schools and examines the concept of virtual learning communities using case studies involving learners, parents and educationalists. The role of the Internet is considered along with the differing national policies on its adoption and on developing online context. ICT: Changing Education reveals the development of open and flexible learning as the next stage of ICT's involvement with education.

Shift Linguals traces a history of the cut-up method, the experimental writing practice discovered by Brion Gysin and made famous by Beat author William S. Burroughs. From the groundbreaking works of Dada and Surrealism that paved the way for Burroughs' breakthrough, through the countercultural explosion of the 1960s, Shift Linguals explores the evolution of the cut-ups within the theoretical frameworks of postmodernism and the avant-garde to arrive at the present and the digital age. Some 50 years on from the first 'discovery' of the cut-ups in 1959, it is only now that we are truly able to observe the method's impact, not only on literature, but on music and culture in a broader sense. The result of over nine years of research, this study represents the first sustained and detailed analysis of the cut-ups as a narrative form. With explorations of the works of Burroughs, Gysin, Kathy Acker, and John Giorno, it also contains the first critical writing on the works of Claude Pélieu and Carl Weissner in English, as well as the first in-depth discussion of the writing of Stewart Home to date.

This Festschrift volume is published in Honor of Yaacov Choueka on the occasion of this 75th birthday. The present three-volumes liber amicorum, several years in gestation, honours this outstanding Israeli computer scientist and is dedicated to him and to his scientific endeavours. Yaacov's research has had a major impact not only within the walls of academia, but also in the daily life of lay users of such technology that originated from his research. An especially amazing aspect of the temporal span of his scholarly work is that half a century after his influential research from the early 1960s, a project in which he is currently involved is proving to be a sensation, as will become apparent from what follows. Yaacov Choueka began his research career in the theory of computer science, dealing with basic questions regarding the relation between mathematical logic and automata theory. From formal languages, Yaacov moved to natural languages. He was a founder of natural-language processing in Israel, developing numerous tools for Hebrew. He is best known for his primary role, together with Aviezri Fraenkel, in the development of the Responsa Project, one of the earliest fulltext retrieval systems in the world. More recently, he has headed the Friedberg Genizah Project, which is bringing the treasures of the Cairo Genizah into the Digital Age. This second part of the three-volume set covers a range of topics related to the application of information technology in humanities, law, and narratives. The papers are grouped in topical sections on: humanities computing; narratives and their formal representation; history of ideas: the numerate disciplines; law, computer law, and legal computing.
