Die Literatur schreibt mit am kulturellen Verständnis von Krankheit und Gesundheit. Dieser Band untersucht das Verhältnis von Literatur, Genderdiskursen und Medizin. Die kulturwissenschaftlich geprägten Einzelstudien betten literarische und journalistische Darstellungen in medizinhistorische Kontexte ein und zeigen, wie Literatur in

die Verhandlung kultureller Wertesysteme eingreift. Der Band richtet sich vor allem an eine Leserschaft, die sich mit den kulturellen Differenzbildungen »gesund vs. krank« und »weiblich vs. männlich« beschäftigt und die sich für die daran anknüpfenden historisch wandelbaren Wert- und Handlungsmuster interessiert. Praxishandbuch ADHS Hogrefe & Huber Publishing

The 9th edition of this valuable tool for assessing and documenting psychopathology, now in English! Now in its 9th edition, the AMDP System is a

widely used tool for documenting psychiatric symptoms in clinical and research projects. It is not only an essential part of many internal clinical documentation systems, but it is also a valuable instrument for training the identification of psychopathological symptoms. This new edition, now in English, involved the complete revision of the psychopathological and somatic symptoms, with particular attention to the elimination of ambiguities and inconsistencies, to the precision of definitions, to the exact differentiation of the self and other ratings, as well as to the user friendliness of the system. Taking account of developments in recent years in the description and rating of psychopathological symptoms, this latest edition of the AMDP System has been extended by an additional eleven psychopathological and three somatic symptoms and a new section on syndrome formation in the appendix. This clearly structured manual enables the standardized application of the system, making it an invaluable tool in the training of medicine and psychology students and an essential reference volume in the

psychiatric field.

Even though important developments within 20th and 21st century philosophy have widened the scope of epistemology, this has not yet resulted in a systematic meta-epistemological debate about epistemology's aims, methods, and criteria of success. Ideas such as the methodology of reflective equilibrium, the proposal to "naturalize" epistemology, constructivist impulses fuelling the "sociology of scientific knowledge", pragmatist calls for taking into account the practical point of epistemic evaluations, as well as feminist criticism of the abstract and individualist assumptions built into traditional epistemology are widely discussed, but they have not typically resulted in the call for, let alone the construction of, a suitable meta-epistemological framework. This book motivates and elaborates such a new meta-epistemology. It provides a pragmatist, social and functionalist account of epistemic states that offers the conceptual space for revised or even replaced epistemic concepts. This is what it means to "refurbish epistemology": The book assesses conceptual tools in relation to epistemology's functionally defined

conceptual space, responsive to both intra-epistemic considerations and political and moral values.

From Silence to Voice Auer Verlag
Zwei Kinder mit deutlichen ADHS-Symptomen schreiben einander E-Mails und berichten über ihre Störung und die Art, wie diese behandelt wird. Auf diese Weise wird über mögliche Entstehungsbedingungen, Erscheinungsbilder, notwendige Untersuchungen und Behandlungen kindgemäß informiert. Da es den Kindern mit ADHS oft an Ausdauer fehlt, ist der Text bewusst kurz und knapp gehalten und mit kleinen Zeichnungen und Grafiken versehen.

Ernst Reinhardt Verlag

Help adults with intellectual disabilities improve their mental health and quality of life Introduces a new emotional development, evidence-based model Details phases and milestones of development for people with ID Explains challenging behaviour and mental health problems according to the model Detailed guidance on how to apply the approach in practice Full of case examples More about the book Using a developmental perspective, the authors offer a new, integrated model for supporting people with intellectual disability (ID). This

concept builds upon recent advances in attachment-informed approaches, by drawing upon a broader understanding of the social, emotional, and cognitive competencies of people with ID, which is grounded in developmental neuroscience and psychology. The book explores in detail how challenging behaviour and mental health difficulties in people with ID arise when their basic emotional needs are not being met by those in the environment. Using individually tailored interventions, which complement existing models of care, practitioners can help to facilitate maturational processes and reduce behaviour that is challenging to others. As a result, the "fit" of a person within his or her individual environment can be improved. Case examples throughout the book illuminate how this approach works by targeting interventions towards the person's stage of emotional development. This book will be of interest to a wide range of professionals working with people with ID, including: clinical psychologists, psychiatrists, occupational therapists, learning disability nurses, speech and language therapists, and teachers in special education settings, as

well as parents and caregivers.
