"An exceptional work that will stand for years as the best study of the African colonization movement. Burin's insights into this often misunderstood idea will be appreciated by all historians of the early national era. The research, both archival and secondary, is excellent."--Douglas Egerton, Le Moyne College "Burin adds significantly to our understanding of the world view of slaveholding colonizationists, of their negotiations with prospectively freed people, and of their struggle with proslavery critics of colonization. . . . Historians of proslavery thought will find new ideas and information here."--Torrey Stephen Whitman, Mount St. Mary's College From the early 1700s through the late 1800s, many whites advocated removing blacks from America. The American Colonization Society (ACS) epitomized this desire to deport black people. Founded in 1816,

the ACS championed the repatriation of black Americans to Liberia in West Africa. Supported by James Madison, James Monroe, Henry Clay, and other notables, the ACS sent thousands of black emigrants to Liberia. In examining the ACS's activities in America and Africa, Eric Burin assesses the organization's impact on slavery and race relations. Burin focuses on ACS manumissions—that is, instances wherein slaves were freed on the condition that they go to Liberia. In doing so, he provides the first account of the ACS that covers the entire South throughout the antebellum era. He investigates everyone involved in the society's affairs, from the emancipators and freedpersons at the center to the colonization agents, free blacks, southern jurists, newspaper editors, neighboring whites, proslavery ideologues, northern colonizationists, and abolitionists on the periphery. In mixing a panoramic view of ACS operations with close-ups on individual participants, Burin presents a unique, bifocal perspective on the ACS. Although colonization leaders initially envisioned their

program as a pacific enterprise, in reality the push-and-pull among emancipators, freedpersons, and others rendered ACS manumissions logistically complex, financially troublesome, legally complicated, and at times socially disruptive enterprises. Like pebbles dropped in water, ACS manumissions rippled outward, destabilizing slavery in their wake. Based on extensive archival research and a database of 11,000 ACS emigrants, Burin's study offers new insights concerning the origins, intentions, activities, and fate of the colonization movement.

Now recognized as one of the most influential books of the twentieth century, *Silent Spring* exposed the destruction of wildlife through the widespread use of pesticides Rachel Carson's *Silent Spring* alerted a large audience to the environmental and human dangers of pesticides, spurring revolutionary changes in the laws affecting our air, land, and water. Despite condemnation in the press and heavy-handed

attempts by the chemical industry to ban the book, Carson succeeded in creating a new public awareness of the environment which led to changes in government and inspired the ecological movement. It is thanks to this book, and the help of many environmentalists, that harmful pesticides such as DDT were banned from use in the US and countries around the world. This Penguin Modern Classics edition includes an introduction by Lord Shackleton, a preface by World Wildlife Fund founder Julian Huxley, and an afterword by Carson's biographer Linda Lear.

Journal of Solution Chemistry University Press of Florida Foundations of Dynamic Economic Analysis presents a modern and thorough exposition of the fundamental mathematical formalism used to study optimal control theory, i.e., continuous time dynamic economic processes, and

to interpret dynamic economic behavior. The style of presentation, with its continual emphasis on the economic interpretation of mathematics and models, distinguishes it from several other excellent texts on the subject. This approach is aided dramatically by introducing the dynamic envelope theorem and the method of comparative dynamics early in the exposition. Accordingly, motivated and economically revealing proofs of the transversality conditions come about by use of the dynamic envelope theorem. Furthermore, such sequencing of the material naturally leads to the development of the primal-dual method of comparative dynamics and dynamic duality theory, two modern approaches used to tease out the empirical content of optimal control models. The stylistic approach ultimately draws attention to the empirical richness of optimal control theory, a feature missing in virtually all other textbooks of this type. It was in September 1906 that the predecessor of the IAG, the 'Internationale Erdmessung', th organized the 15 General Assembly at the Hungarian Academy of Sciences in Budapest. It was 95 years later, in September 2001, that the IAG returned to this beautiful city to hold its Scientific Assembly, IAG 2001, in the historical premises of the Academy. The meeting took place from September 2-7, 2001 and continued the tradition of Scientific Assemblies, started in Tokyo (1982) and continued in Edinburgh (1989), Beijing (1993) and Rio de Janeiro (1997).

Held every four years at the midpoint between General Assemblies of the IAG, they focus on giving an integrated view of geodesy to a broad spectrum of researchers and practitioners in geodesy and geophysics.

The convenient location of the main building of the Hungarian Academy in downtown Budapest and the superb efforts of the Local Organizing

Committee contributed in a major way to the excellent atmosphere of the meeting. As at previous meetings, the scientific part of the program was organized as a series of symposia which, as a whole, gave a broad overview of actual geodetic research activities. To emphasize an integrated view of geodesy, the symposia did not follow the pattern of the IAG Sections, but focussed on current research topics to which several IAG Sections could contribute. Each symposium had 5 sessions with presented papers and poster sessions on two consecutive days.
