This grade level specific handbook provides classroom-tested techniques and ideas to make assessment and instruction more manageable, productive, and exciting, as well as offering a more complete picture of each student's progress and instructional needs through techniques and tools from the four assessment areas: ongoing, product, periodic and outside tests. The Assessment Handbook includes suggestions for observing students, keeping anecdotal records, following student progress, and encouraging students to reflect on and communicate both what they have learned and how they feel about mathematics.

Is race something we know when we see it? In 1857, Alexina Morrison, a slave in Louisiana, ran away from her master and surrendered herself to the parish jail for protection. Blue-eyed and blond, Morrison successfully convinced white society that she was one of them. When she sued for her freedom, witnesses assured the jury that she was white, and that they would have known if she had a drop of African blood. Morrison's court trial—and many others over the last 150 years—involved high stakes: freedom, property, and civil rights. And they all turned on the question of racial

identity. Over the past two centuries, individuals and groups (among them Mexican Americans, Indians, Asian immigrants, and Melungeons) have fought to establish their whiteness in order to lay claim to full citizenship in local courtrooms, administrative and legislative hearings, and the U.S. Supreme Court. Like Morrison's case, these trials have often turned less on legal definitions of race as percentages of blood or ancestry than on the way people presented themselves to society and demonstrated their moral and civic character. Unearthing the legal history of racial identity, Ariela Gross's book examines the paradoxical and often circular relationship of race and the perceived capacity for citizenship in American society. This book reminds us that the imaginary connection between racial identity and fitness for citizenship remains potent today and continues to impede racial justice and equality.

Anyone with an interest in working for the US Post Office as a clerk or a mail carrier must take either the 473-C city carrier exam, the 473 retail clerk exam, or the 460 rural carrier exam (which has not changed). Those candidates who receive a 95% or higher score are interviewed first; those with scores lower than 90% aren't often interviewed at all, making these exams extremely competitive. The Postal Clerk and Carrier Exam Cram, Second Edition, is a concise review guide that can help you score higher on the postal clerk and carrier exams and eliminate some of the competition. The new edition covers all of the exam topics from the USPS, including new topics like Address Coding, Forms Completion, and Personal Characteristics and Experience Inventory. These topics replaced number series, memory for addresses, and oral instructions. The Exam Cram also provides exam alerts, strategies, tips, a practice exam on each topic and four full practice exams covering all the topics. The Cram Sheet tear card provides facts for

last minute review. Study your way to a higher score with the Postal Clerk and Carrier Exam Cram, Second Edition.

The Graphical User Interface (GUI), as the most prevailing type of User Interface (UI) in today's interactive applications, restricts the interaction with a computer to the visual modality and is therefore not suited for some users (e.g., with limited literacy or typing skills), in some circumstances (e.g., while moving around, with their hands or eyes busy) or when the environment is constrained (e.g., the keyboard and the mouse are not available). In order to go beyond the GUI constraints, the Multimodal (MM) UIs appear as paradigm that provide users with great expressive power, naturalness and flexibility. In this thesis we argue that developing MM UIs combining graphical and vocal modalities is an activity that could benefit from the application of a methodology which is composed of: a set of models, a method manipulating these models and the tools implementing the method. Therefore, we define a design space-based method that is supported by model-to-model colored transformations in order to obtain MM UIs of information systems. The design space is composed of explicitly defined design options that clarify the development process in a structured way in order to require less design effort. The feasibility of the methodology is demonstrated through three case studies with different levels of complexity and coverage. In addition, an empirical study is conducted with end-users in order to measure the relative usability level provided by different design decisions.
