Improving clinicians' understanding of effects nutrition can have on maternal health and fetal and neonatal development can have considerable impact on achieving a healthy pregnancy and reducing childhood morbidity. This book defines the nutritional requirements with regard to each stage of fetal development and growth, placing scientific developments into a clinical context. Clinicians and scientists discuss: how the fetus grows and what macro- and micronutrients it requires; what happens when there is nutrient deficiency and when placental development is abnormal; aspects of infant feeding, both with breast milk and formula milk. Specific problems encountered in pregnancy that pose a nutritional challenge are also considered, including pregnancy in teenagers, multiple pregnancies and pregnancy in those who are vegetarians or vegans. All doctors, health-care workers or scientists who either care for women, their newborn

and growing infants, or who are involved in research in these areas, will find this to be essential reading.

**Infant and Child Nutrition Worldwide** Academic Press

*Reproductive and Perinatal Epidemiology* Oxford University Press  
Population growth and global health disparities for many reproductive and perinatal outcomes are but a few of the pressing issues facing public health today. Despite growing interest in the field, formal training in reproductive and perinatal epidemiology remains limited, with few available textbooks aimed at providing an overview of the field. In response to this need, faculty from the Eunice Kennedy Shriver National Institute of Child Health & Human Development (NICHD) and CIHR's Institute of Human Development, Child and Youth Health (IHDCYH) developed an intensive, competitive, Summer Institute in Reproductive and Perinatal Epidemiology. The curriculum of this Summer Institute has been developed into a textbook to provide students and researchers with a working knowledge of the substantive and methodologic issues underlying reproductive

and perinatal epidemiology. Reproductive and Perinatal Epidemiology offers a core curriculum that addresses the epidemiology of major reproductive and perinatal outcomes. From human fecundity to birth and neonatal outcomes, the subject is approached from an international perspective as possible, and the unique methodologic issues underlying each outcome are discussed. Developed by leading researchers in collaboration with their students in response to their needs and concerns, this is the definitive textbook on the subject.

This Research Topic covers some of the latest research on brain and behavior in health and disease in Africa. With its untapped resources and unique situations, "Neuroscience in Africa" has the potential to contribute to a better understanding of human brain function both in health and disease. The diverse African fauna display a range of specializations in brain structure/function relationships as a result of adaptations to the environment. Exploration of these may lead to insights into coping strategies which could be extrapolated to humans. Africa's unique flora is being investigated for anti-inflammatory, antinociceptive, antioxidant, antiepileptogenic and neuroprotective properties to determine its potential for use in the treatment of human brain disorders. There is also research on neurodegenerative and infectious diseases, not only common to the global world, but also neglected tropical diseases and conditions which provide unique avenues of investigations in basic and translational neuroscience on highly debilitating disorders - and on the effects of pathogens and environmental toxins.
