The astonishing drama of Cold War nuclear poker that divided humanity - reissued with a new Postscript to commemorate the thirtieth anniversary of the fall of the wall. During the night of 12-13 August 1961, a barbed-wire entanglement was hastily constructed through the heart of Berlin. It metamorphosed into a structure that would come to symbolise the insanity of the Cold War: the Berlin Wall. Frederick Taylor tells the story of the post-war political conflict that led to a divided Berlin and unleashed an East-West crisis, which lasted until the very people the Wall had been built to

imprison breached it on 9 November 1989. Weaving together history, original archive research and personal stories, The Berlin Wall, now published in fifteen languages, is the definitive account of a divided city and its people in a time when humanity seemed to stand permanently on the edge of destruction.

This history traces the development of helicopters in the Marine Corps from 1962 to 1973 and is the second in a series of two volumes which between them cover the story of Marines and helicopters from 1946 to the present. In the period covered by this volume, the Marines at last acquired helicopters fully capable of carrying out an amphibious vertical assault, and they further elaborated their helicopter doctrines and tactics. In the Vietnam war, pilots and machines met and surmounted the test of actual combat. The documentary basis for this monograph was primarily the official records of the Marine Corps and Navy Department, but considerable use was made of interviews and correspondence with key individuals involved in all phases of helicopter development. One of the most pervasive characteristics of man is hindsight. It masquerades under many guises: Monday morning quarterbacking, second guessing, and historical writing. When viewed through time, the past becomes distorted. Problems seem simpler, the choices more clear, and the conditions less complex than those of the present. The men who played a part become more heroic or more villainous than they were in life. This volume is an attempt to portray accurately the difficulties faced and the obstacles conquered by the men who developed helicopters in the Marine Corps, so that the Marines of today and the future may meet the challenges of their own times with the same dedication as their predecessors. The men who developed helicopters in the Marine Corps had nothing more to rely on than their knowledge of what had preceded them, intelligence liberally used, and both mental and physical courage. The present-day Marine will be well served if he applies nothing more.

Now repackaged in an attractive and great value-for-money format, this overview of twentieth-century horology combines stunning pictures of the most covetable time-pieces with the unparalleled expertise of a world-renowned vintage watch dealer. This impeccably researched and lavishly illustrated book traces the evolution of the watch across the twentieth century. It charts the early rise of the wristwatch, shows how the cataclysmic events of the 1929 Wall Street Crash unexpectedly led to a golden age of watch production, and demonstrates how the electronic watch, which almost destroyed the traditional industry, led to a mechanical watch renaissance in the last part of the century. Each chapter focuses on a specific decade, opening with an introduction to the era's stylistic and design highlights and then examines the development of specific genres of watches. Hundreds of color photographs include full-page close ups that reveal intricate details of form, texture, and design. Alexander Barter's vast knowledge

informs his gripping texts, which discuss the major achievements in watch technology and design. This book also includes vintage advertisements and other promotional materials, helping to give a sense of the eras in which they were created. The perfect gift for watch aficionados, this beautiful and informative volume presents the world's finest watches with an elegance and depth befitting its subject.

This book presents the latest developments in the field of biomedical engineering and includes practical solutions and strictly scientific considerations. The development of new methods of treatment, advanced diagnostics or personalized rehabilitation requires close cooperation of experts from many fields, including, among others, medicine, biotechnology and finally biomedical engineering. The latter, combining many fields of science, such as computer science, materials science, biomechanics, electronics not only enables the development and production of modern medical equipment, but also participates in the development of new directions and methods of treatment. The presented monograph is a collection of scientific papers on the use of engineering methods in medicine. The topics of the work include both practical solutions and strictly scientific considerations expanding knowledge about the functioning of the human body. We believe that the presented works will have an impact on the development of the field of science, which is biomedical engineering, constituting a contribution to the discussion on the directions of development of cooperation between doctors, physiotherapists and engineers. We would also like to thank all the people who contributed to the creation of this monograph—both the authors of all the works and those involved in technical works.
