This book celebrates the investigative

power of phenomenology to explore the phenomenological sense of space and time in conjunction with the phenomenology of intentionality, the invisible, the sacred, and the mystical. It examines the course of life through its onto-poietic genesis, opening the cosmic sphere to logos. The work also explores,

on the one hand, the intellectual drive to locate our cosmic position in the universe and, on the other, the pull toward the infinite. It intertwines science and its grounding principles with imagination in order to make sense of the infinite. This work is the first of a two-part work that contains papers presented at the 62nd International Congress of Phenomenology, The Forces of the Cosmos and the Ontopoietic Genesis of Life, held in Paris, France, August 2012. It features the work of scholars in such diverse disciplines as biology, anthropology, pedagogy, and psychology who philosophically investigate the cosmic origins of beingness. Coverage in this first part includes: Toward a New Enlightenment: Metaphysics as Philosophy of Life,

Transformation in Phenomenology: Husserl and Tymieniecka, Biologically Organized Quantum Vacuum and the Cosmic Origin of Cellular Life, Plotinus "Enneads" and Self-Creation, The Creative Potential of Humor, Transcendental Morphology – A Phenomenological Interpretation of Human and Non-Human Cosmos, and Cognition and Emotion: From Dichotomy to Ambiguity.

La science de l'information : Origines, théories et paradigmes cri-one aka chris brown

"Cézanne, Murder and Modern Life changes the way we think about—and see—Cézanne's entire oeuvre. Dombrowski's arguments are convincing and bold, especially on the theme of murder as a vehicle for representation.

Modern Olympia has never before been so satisfactorily analyzed." Susan Sidlauskus, Rutgers University, author of *Cezanne's Other: The Portraits of Hortense* "Exciting and intelligent, *Cézanne, Murder, and Modern Life* will be important for modernists, and essential for scholars of Cézanne, early Impressionism, and painting in the 1860s. Dombrowski shows us a Cézanne we did not know." Nancy Locke, author of *Manet and the Family Romance*
Poetry, Knowledge and Community in Late Medieval France Presses Université Laval

The critical analysis of science textbooks is vital in improving teaching and learning at all levels in the subject, and this volume sets out a range of academic perspectives on how that analysis should

be done. Each chapter focuses on an aspect of science textbook appraisal, with coverage of everything from theoretical and philosophical underpinnings, methodological issues, and conceptual frameworks for critical analysis, to practical techniques for evaluation. Contributions from many of the most distinguished scholars in the field give this collection its sure-footed contemporary relevance, reflecting the international standards of UNESCO as well as leading research organizations such as the American Association for the Advancement of Science (whose Project 2061 is an influential waypoint in developing protocols for textbook analysis). Thus the book shows how to gauge aspects of textbooks such as their treatment of controversial issues,

graphical depictions, scientific historiography, vocabulary usage, accuracy, and readability. The content also covers broader social themes such as the portrayal of women and minorities. "Despite newer, more active pedagogies, textbooks continue to have a strong presence in classrooms and to embody students' socio-historical inheritance in science. Despite their ubiquitous presence, they have received relatively little on-going empirical study. It is imperative that we understand how textbooks influence science learning. This book presents a welcome and much needed analysis." Tina A. Grotzer Harvard University, Cambridge, Massachusetts, USA The present book provides a much needed survey of the current state of research into science

textbooks, and offers a wide range of perspectives to inform the 'science' of writing better science textbooks. Keith S Taber University of Cambridge, Cambridge, United Kingdom

nology in New Zealand. Angeles Tan Alora reports on the Code of Pharmaceutical Marketing Practices developed by the Pharmaceutical and Health Care Association of the Philippines. Ruud ter Meulen and his colleagues provide detailed analysis of the Remmelink Commission's report on

euthanasia in the Netherlands. Kazumasa Hoshino discusses the findings of the Special Committee on Gene Therapy in Japan. As such examples suggest, the activities of many governmental groups and professional advisory bodies, although varied, tend to converge upon a number of especially important issues. If one peruses the index of documents discussed in Volume Four, certain topics are more often the focus of legislation and official concern than others: withholding and withdrawing treatment, access to health care, consent to treatment and experimentation, and issues posed by HIV testing and AIDS. Such a common focus should not be exaggerated, for the discussion of topics is wide-ranging. But that commonality, when in evidence, is

also not surprising. It suggests that key issues and concerns in bioethics may be widely shared among modern cultures and societies, for all the distinctiveness of a particular nation's or region's response to them. Issues of informed consent, after all, implicate more fundamental matters of respect for persons and the rights of individuals in the contexts of therapy and research. Issues of access to medical care concretize deeper questions about the nature and scope of a society's welfare obligations to its citizens.

 The history of the concept of “religion” in Western tradition has intrigued scholars for years. This important collection of eighteen essays brings further light to the ongoing debate. Three of the invited participants, W.C. Smith, M. Despland and E. Feil, has each previously written impressive books treating this subject; the last two acknowledged the impact and continuing influence of Smith’s work, *The Meaning and End of Religion*. An introduction and a recapitulation of Smith’s contribution as a scholar set the stage for a retrospective look at the published literature. Contributors then examine the transformation of words (the classical religio to the modern religion), particularities of religion in nineteenth-century France, Troeltsch’s

concept of religion, the study of religion from an Asian point of view and the categorization of “World Religions.” The concluding essays elaborate contemporary anthropological, cross-disciplinary, semiological, deconstructive and psychoanalytical methodological approaches to the concept and study of “religion.” Exploring critically different aspects of the concept and study of religion, these provocative essays typically reflect the methodological pluralism currently existing in the field of Religious Studies. Of interest to scholars and students alike, this collection also contains a complete bibliography of W.C. Smith’s publications.

This report discusses the need for an integrated and cyclical approach to managing health technology in order to mitigate clinical and financial risks, and ensure acceptable value for money.

Critical Analysis of Science Textbooks

Univ of California Press

For the first time, based on an extensive survey conducted across the whole of Europe by the Association Descartes, the details of over 1,000 persons and organisations are now available. The Directory is broken down into 14 sections : the first section is devoted to European institutions; the next twelve cover each EEC country and list the names of persons and organisations involved in bioethics; a complementary listing covers indispensable persons or organisations; A reference work both for

researchers and anybody concerned with bioethics.

National Library of Medicine Current Catalog Harvard University Press

This collection presents perspectives into the pristine field of

phenomenology/philosophy of life

conceived by Tymieniecka, initiated in the *Analecta Husserliana* and unfolding with each volume. This new and original philosophy reaches to the 'inner workings of Nature' as well as to the innermost recesses of the Human Creative Condition, opening a basic starting point for all philosophy. Life, 'the theme of our times', finds at last a profound philosophical treatment.

Sport, Le Troisième Millénaire Springer Science & Business Media

This volume will focus on a much need

comparison of science teacher preparation from around the world. In recent times (last 5 years) much has been written and communicated both in the popular press and within the annals of research oriented publications about the performance of students international in math and science. Although not a new discussion or debate, many countries are held as exemplars in how they educate their youth and subsequently how they educate their teachers. Given this situation and given the fact that there is ample evidence to show that some countries youth perform better on tests such as the Program for International Student Assessment (PISA) and we know that teacher significantly contribute to the performance of students, it is time that we look at the

specific attributes of teacher preparation worldwide. Although this volume will not look at every country that is in the comparator group for PISA and other measures, we have contacted over 18 potential authors in the same number of countries in which there is ample evidence to show successes regarding student performance and quality teacher preparation programs. The intent of the book is not just to report on the “success” of each nation. Rather the intent is to ask authors to take a critical look at the process by which science teachers are educated and share with the reader both the positive and negative aspects of such preparation programs. For all 15 contributed chapters, the editors have analyzed each and from this constructed from the

“data” an analysis and report in a final chapter on the exemplary qualities from various nations and make specific recommendations regarding science teacher preparation for the global community.

The role of poetry in the transmission and shaping of knowledge in late medieval France.

Catalogue of the Library of Parliament

BoD - Books on Demand

Cet ouvrage de synthèse sur les fondements théoriques et épistémologiques de la science de l'information répond à trois questions : - existe-t-il une science de l'information à part entière ? - comment se définit

l'information, objet de cette science ? - y a-t-il une spécificité française de la science de l'information ? Ce livre compare les chemins parcourus par la science de l'information en France et dans le reste du monde. Il contextualise cette évolution à l'aune d'une diversité d'inscriptions disciplinaires. L'enjeu de la science de l'information est de concilier l'approche réaliste de la connaissance, l'approche individualiste des sciences cognitives et l'approche collectiviste où les domaines sont façonnés et les comportements sont modulés par les environnements, les cultures et les construits sociaux partagés. Cette étude sera utile à tous les chercheurs, étudiants et professionnels désirant approfondir leurs connaissances sur les fondements théoriques de la science de

l'information.

The aim of this collective work is to give an account of the topicality and dynamics of new research in the didactics of evolution, by articulating francophone and international work. The various contributions pursue a reflection on the challenges of teaching and learning about evolution, based on historical, epistemological and societal approaches. The themes addressed illustrate the vitality and diversity of research issues in educational sciences, from primary school to university. Structured around different theoretical fields (problematization, didactics of the curriculum, nature of science, etc.), this

book explores the content, teaching and learning processes and approaches, teaching practices, as well as pre-service and in-service teacher training, with a view to both intelligibility and feasibility.

CŹzanne, Murder, and Modern Life

Peter Lang

“A truly remarkable forgotten chapter of European intellectual history, laid out with passion and integrity.” (The Wall Street Journal) The exploits of Alexander the Great were so remarkable that for centuries after his death the Macedonian ruler seemed a figure more of legend than of history. Thinkers of the European Enlightenment, searching for ancient models to understand contemporary affairs, were the first to critically interpret Alexander’s achievements. As Pierre Briant shows, in the minds of

eighteenth-century intellectuals and philosophers, Alexander was the first European: a successful creator of empire who opened the door to new sources of trade and scientific knowledge, and an enlightened leader who brought the fruits of Western civilization to an oppressed and backward “Orient.” In France, Scotland, England, and Germany, Alexander the Great became an important point of reference in discourses from philosophy and history to political economy and geography. Voltaire, Montesquieu, and Robertson asked what lessons Alexander’s empire-building had to teach modern Europeans. They saw the ancient Macedonian as the embodiment of the rational and benevolent Western ruler, a historical model to be emulated as

Western powers accelerated their colonial expansion into Asia, India, and the Middle East. “This important work. . . confirms once more that the life-trajectory of the Macedonian conqueror remains an inexhaustible cultural resource.” —Sanjay Subrahmanyam, University of California, Los Angeles, author of *Empires Between Islam and Christianity*

This book is about the tumultuous and even passionate relationship between New Education and Educational Sciences, which are regarded as an inseparable «couple», intrinsically linked and surprisingly fruitful. Yet they remain irreconcilable and are mutually contradictory in a number of their elements and characteristics. Do Educational Sciences offer a scientific base or ideological support for New Education? Do the numerous new educational initiatives and reforms provide a «laboratory» for Educational Sciences or alternatives to the new scientific paradigms? Is this at the risk of their merging? And what is the price of these tensions? Specialists in the history of Educational Sciences and New

Education from various geographical, cultural and disciplinary horizons explore the complex links between this powerful reforming movement and the nascent disciplinary field that emerged during the first half of the 20th century. Cet ouvrage analyse les relations tumultueuses - passionnelles même - de l'Education nouvelle et des Sciences de l'éducation: un couple indissociable - intrinsèquement lié et d'une étonnante fécondité - autant qu'inconciliable, nombre de leurs présupposés et caractéristiques se contredisant mutuellement. Les Sciences de l'éducation offrent-elles la base scientifique ou l'appui idéologique de l'Education nouvelle ? Les nombreuses expériences et réformes éducatives constituent-elles des laboratoires des

Sciences de l'éducation ou des alternatives aux nouveaux paradigmes scientifiques ? Au risque de leur fusion ? Au prix de quelles tensions ? Des spécialistes de l'histoire des Sciences de l'éducation et de l'Education nouvelle d'horizons géographiques, culturels et disciplinaires divers explorent les rapports complexes entre ce puissant mouvement réformiste et le champ disciplinaire naissant durant la première moitié du 20e siècle.

9 Book Shorts Lavoisier

This volume continues to build on the relationship between the Research in Management Consulting series and the

intervener-researchers at the Socio-Economic Institute for Firms and Organizations (ISEOR) in Ecully, France, extending that partnership to our recent work with the French Foundation for Management Education (FNEGE), a foundation dedicated to closing the gap between the teaching and practice of management in France. As part of the Foundation's multifaceted activities—which range from seminars and an advanced training initiative for French doctoral students to joint programs with international organizations and associations—FNEGE partnered with ISEOR to sponsor a series of workshops on developing high quality intervention-research. This volume is one of the results from that endeavor. Although intervention-research helps to

uncover valuable insight into organizational dynamics and performance, the challenge of capturing and disseminating that insight to both academics and practitioners is entrenched in the rigor-relevance debate. While we are witnessing increased calls for “actionable knowledge,” this ideal, unfortunately, remains a rather elusive concept as critics contend either that rigorous academic research falls well-short of relevance to the practitioner world or research that proves to be valuable to practitioners falls short of the rigor

expected in academic life. This volume is intended to help bridge that divide.

Drawing on the FNEGE-ISEOR intervention-research workshop, the volume contains 18 chapters that explore the intervention-research process, from initial conceptualization, to implementation, to publication. The volume will be published in French and English
