It was a dangerous time for Jews in Old Prague, so out of the mud Rabbi Loeb made a Golem. This was a creature of great strength but little understanding, but who would help the Rabbi protect his people as long as the rabbi could control and direct him.

Now in its eighth edition, Bird's Basic Engineering Mathematics has helped thousands of students to succeed in their exams. Mathematical theories are explained in a straightforward manner, supported by practical engineering examples and applications to ensure that readers can relate theory to practice. Some 1,000 engineering situations/problems have been 'flagged-up' to help demonstrate that engineering cannot be fully understood without a good knowledge of mathematics. The extensive and thorough coverage makes this a great text for introductory level engineering courses - such as for aeronautical, construction, electrical, electronic, mechanical, manufacturing engineering and vehicle technology - including for BTEC First, National and Diploma syllabuses, City & Guilds Technician Certificate and Diploma syllabuses, and even for GCSE revision. Its companion website provides extra materials for students and lecturers, including full solutions for all 1,700 further questions, lists of essential formulae, multiple choice tests, and illustrations, as well as full solutions to revision tests for course instructors.

Despite his importance and influence, jazz musician, educator, and community leader Horace Tapscott remains relatively unknown to most Americans. In *Songs of the Unsung* Tapscott shares his life story, recalling his childhood in Houston, moving with his family to Los Angeles in 1943, learning music, and his early professional career. He describes forming the Pan Afrikan Peoples Arkestra in 1961 and later the Union of God's Musicians and Artists Ascension to preserve African American music and serve the community. Tapscott also recounts his interactions with the Black Panthers and law enforcement, the Watts riots, his work in Hollywood movie studios, and stories about his famous musician-activist friends. *Songs of the Unsung* is the captivating story of one of America's most unassuming heroes as well as the story of L.A.'s cultural and political evolution over the last half of the twentieth century.

Mumbai is an ever-evolving city, bustling and brimming, never sleeping for a wink. But the past four decades brought upheavals of great magnitude that shaped the city as we know today. Marred by communal riots, gang wars and terrorism, the spirit of Mumbai has emerged indomitable every single time. Born and raised in the lanes of Bombay 3, this is the story of Jagan Kumar who dreams of being a television journalist and changing the world. But once he achieves this, he realises that television journalism has lost its path, now afflicted with sensationalism, corruption and bias. As a crime reporter, he comes across various unscrupulous means that law enforcement agencies adopt to combat organised crime syndicates. He is shocked to witness

interdepartmental rivalry that often jeopardises public security. Disenchanted, in conflict with his conscience and confused about his calling, he is about to quit when something happens that changes the course of his life. *Bombay 3* begins from the bylanes of old Bombay of the seventies and then takes you to Mosul in ISIS's Iraq of 2014 and finally to the streets of Bangkok where the underworld of Mumbai has spread its tentacles. A fast-paced thriller, it answers certain questions about life in Mumbai and raises a few new ones.

Integral Mechanical Attachment, highlights on one of the world's oldest technologies and makes it new again. Think of buttons and toggles updated to innovative snaps, hooks, and interlocking industrial parts. Mechanical fasteners have been around as long as mankind, but manufacturers of late have been re-discovering their quick, efficient and fail proof advantages when using them as interlocking individual components as compared with such traditional means of joining materials like welding, soldering, gluing and using nuts bolts, rivets and other similar devices. For many years, it has been virtually impossible to find a single-source reference that provides an overview of the various categories of fastening systems and their various applications. Design engineers should find this book to be an invaluable source

of detailed, illustrated information on how such fasteners work, and how they can save time and money. Students, too, will find this book to be extremely useful for courses in mechanical design, machine design, product development and other related areas where fastening and joining subjects are taught. This will be the first reference book to come along in many years that will fully illustrate the major classes of integral mechanical fasteners, replete with examples of typical assembly and ideas and suggestions for further research.\* Covers all major techniques for integral mechanical attachment within the context of other types of joining including chemical (adhesive) bonding, melting and solidification (welding, soldering, brazing), and mechanical joining (fasteners and part features)\* Includes specific chapters for particular attachment considerations by materials type, including metals, plastics, ceramics, glass, wood, and masonry\* Provides unique coverage of mechanical/electrical connections for reliable contact and use

Unparalleled in the English language, *The Book of Things*, Berk's uniquely compelling lyric trilogy, is an uncommon meditation on the inner life of common things. Mud, bras, slugs and doore - Berk sings them all in this twisting, labyrinthine song of the strange and sensual, by turns playful and surprising, learned and hilarious, beautiful and unsettling in its quikiness. Berk's tireless

journey into the unknown, *The Book of Things* is a testament to the poet's undying appetite for engagement and renewal, his perennial call to awakening.

The contributors, who also bear in mind domestic factors, investigate Greek foreign policy in the 1990s in the context of these changes. They ask whether Greece is an awkward partner in the European Union; whether Greece will be able to remain an equal member of the EU; how it treats its minorities and political dissenters; and, controversially, whether Greek policy contributed to the Balkan crisis.

On four different occasions, both in summer and in winter, I have sailed along the southern shore of the Black Sea almost from one extremity to the other; yet I do not remember having seen the sky free from heavy clouds during two consecutive days. As the ship speeds eastwards along the mountains of Bithynia, a thin veil of haze will blend the land outlines together; while, as the range grows in height with every mile of progress, the vapour will

collect about its upper slopes in long, horizontal, black banks. Even when the sun of this southern climate has swept the sky of every lingering film, when the zenith and the water recall the hues of the Mediterranean—the whole scale of brilliant blues—somewhere upon the wide circle of the horizon will be lurking the scattered forces of the mist. But the stronghold of the cloud is in the mountains of Akhaltsykh, at the foot of Caucasus, in the extreme eastern angle of the sea. Can there exist a more gloomy coast? There the sky is always lowering above the inky water, and the forests of fir which clothe the range from foot to summit wave darkly, like feathers over a pall. Such, I think, are the impressions which the mind most closely associates with the aspect of this sea and shore. What a contrast to the smiling landscape of the Bosphorus, the strait through which we enter this sad sea or leave it on our return home! The cold draught follows the home-coming ship up the narrow channel between the wooded cliffs, and frets the running tide into crisp little waves which sparkle in the brilliant light. The dolphins leap from the blue water and dart shining through the air. To the traveller who is returning from a long journey in Asia and a tedious tossing on this grey sea, the Bosphorus, always bright and gay and beautiful, may appear as the promised gate of paradise beyond the world of shades. The character of the coast cannot fail to be affected by this climate, by this atmosphere. Just as the vapours gather thickest where the mountains are most lofty, at the south-eastern angle of the sea, so the vegetation increases in luxuriance and variety the further eastwards we proceed on our course. The cliffs or rolling hills about the entrance of the Bosphorus—the closing cliffs of the Greek legend, which caught

the tail-feathers of the dove—soon give place to the belt of wooded mountains which rise from the immediate margin of the water, and stretch from west to east along the entire seaboard to the Phasis and Batum. Tier upon tier they rise from the narrow strip of sand and pebbles, and grow both in height and in boldness of outline as they stretch towards the east. The winds of the open sea, the cold winds of Scythia, fly over the barrier of the range; and the ship may often anchor in smooth water at a point where least protection would appear to be offered by the configuration of the shore. But the moisture of the air is arrested at the coast-line, and hangs about the upper tiers of the mountains or clings to the fir-clad slopes. These natural conditions are extremely favourable to vegetation, and the larger grows the scale upon which they are operating, the more abundant becomes the growth of trees and shrubs. When at last we have reached the neighbourhood of the Phasis, where the wall of this range towers highest above us on the one side, and the line of Caucasus closes the horizon on the other, the shore becomes clothed with dense forests, plants and creepers flourish with tropical exuberance; the traveller, threading the maze of evergreen woodland, might be walking along the banks of the Amazon or through the glades of Mazanderan.

#### The Golem of Old Prague

The solemn beatification of Pope Pius IX in September 2000 celebrated the heroic virtue of one of the most influential figures of the nineteenth century. Born in 1792, Giovanni Maria Mastai Ferretti was elected Pope on June 16th 1846. His pontificate, the subject of this biographical study, lasted thirty-two years, the longest after that of St Peter himself. Elevated to the Papacy

amid the historical backdrop of turmoil and revolution in Italy and Europe, he was also to play a central role in the drama of the Risorgimento that led to the creation of a united Italy. Publication of the English translation of Roberto de Mattei's acclaimed study of Pius IX marks the 150th anniversary of the Pope's solemn definition of the Dogma of Our Lady's Immaculate Conception. Roberto de Mattei holds the chair of Modern History at the University of Cassino (Rome), is vice president of the Italian C.N.R. (National Council for Research) and is well-known in Italy as a journalist and writer.

This state-of-the art research Handbook provides a comprehensive, coherent, current synthesis of the empirical and theoretical research concerning teaching and learning in science and lays down a foundation upon which future research can be

built. The contributors, all leading experts in their research areas, represent the international and gender diversity that exists in the science education research community. As a whole, the Handbook of Research on Science Education demonstrates that science education is alive and well and illustrates its vitality. It is an essential resource for the entire science education community, including veteran and emerging researchers, university faculty, graduate students, practitioners in the schools, and science education professionals outside of universities. The National Association for Research in Science Teaching (NARST) endorses the Handbook of Research on Science Education as an important and valuable synthesis of the current knowledge in the field of science education by leading individuals in the field. For more information on NARST, please visit: <http://www.narst.org/>.
