Singapore's Health Care System Independently Published

"How did Singapore's health care system transform itself into one of the best in the world? It not only provides easy access, but its standards of health care, not only in curative medicine but also in prevention, are exemplary. Fifty years ago, the infant mortality rate (IMR) was 26 per thousand live births; today the IMR is 2. Life expectancy was 64 years then; today, it is 83. The Singapore Medicine brand is trusted internationally, and patients are drawn to Singapore from all over the world. And while many countries struggle to finance their health care, Singapore has developed a health care financing framework that makes health care affordable for its people and gives sustainability to the health care system. Reliability is provided by a professional workforce that seeks to continually learn, improve and become ever more proficient with cutting edge technology while emphasizing the relational aspects of health care by nurturing compassion and maintaining high standards of integrity. Convenience and safety are enhanced by a unifying IT system that

enables the portability of medical records across health care institutions. All these have been achieved not by chance but by careful planning, strong leadership and dedicated people who are prepared to learn from Singapore's own experience while adapting best practices from around the world. But the system is not without challenges -- not least those of an aging population, and an increasing market influence. This book provides a fascinating insight into the development of Singapore's health care system from the early days of fighting infections and providing nutrition supplementation for school children, to today's management of lifestyle diseases and high-end tertiary care. It also discusses how the system must adapt to help Singaporeans continue to "live well, live long, and with peace of mind."--

Crime Scene Investigation Kids Can Press Ltd

The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well-planned and effective assessment can inform teaching and program improvement, and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well-being, but only if they are well designed, implemented effectively, developed in the context of systematic planning, and are interpreted and used appropriately. Otherwise, assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. Early Childhood Assessment addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments.

The Internet: A Philosophical Inquiry develops many of the themes Gordon Graham presented in his highly successful radio series, The Silicon Society. Exploring the tensions between the warnings of the Neo-Luddites and the bright optimism of the Technophiles, Graham offers the first concise and accessible exploration of the issues which arise as we enter further into the world of Cyberspace. This original and fascinating study takes us to the heart of questions that none of us can afford to ignore: how does the Internet affect our concepts of identity, moral anarchy, censorship, community, democracy, virtual reality and imagination? Free of jargon and full of stimulating ideas, this is essential reading for anyone wishing to think clearly and informatively about the complexities of our technological future.

Architects' Data HarperChristian + ORM

This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

Media, Culture, and Politics in Indonesia is about the institutions and policies that determine what Indonesians write, read, watch, and hear. It covers the print media, broadcast radio and television, computers and the internet, videos, films and music. This book argues that the texts of the media can be understood in two broad ways: 1. as records of a "national" culture and political hegemony constructed by Suharto's New Order and 2. as contradictory, dissident, political and cultural aspirations that reflect the anxieties and preoccupations of Indonesian citizens. Media, Culture, and Politics, now brought back to life as a member of Equinox Publishing's Classic Indonesia series, explains what has escaped state control, not only by self-conscious resistance, but also because of the ownership patterns, technologies, and modes of consumption of media texts and institutions. The role of the media in the downfall of Suharto is examined and the legacy of his New Order is analyzed. This dynamic and innovative text is suitable for all students of Indonesian languages and culture, Asian studies, Southeast Asian studies, cultural studies, media studies, and contemporary politics.
