1. 1 Historical Aspects and Terminology Granulated metrial gland (GMG) cells are readily identified by their cytoplasmic granules and were observed a number of years before the term "metrial gland" was introduced. A series of papers by Duval in 1891 provided a comprehensive description and a critical review of earlier studies of the placenta of rodents, but it was not until 1902 that the first convincing illustrations of GMG cells appeared in the literature (Jenkinson 1902). Jenkinson described "maternal glycogen cells" in the pregnant mouse uterus and noted that they contained cytoplasmic granules which stained with a variety of dyes. From his detailed description of the appearance and distribution of these maternal glycogen cells it is clear that he had observed what are now called granulated metrial gland cells. In 1911 Ancel and Bouin used the phrase *une glande myometriale endocrine* to describe a structure appearing between the muscle layers of the uterus at the insertion site of the placenta in rabbits. They described one of the cell types present in the *glande myometriale* as having the characteristics of glandular cells and noted their content of safranophilic cytoplasmic granules. A *glande myometriale endocrine* was also described in the pregnant rat uterus by Weill (1919). He reported that the *cellules granuleuses* contained acidophilic inclusions and despite the absence of any illustrations in his paper it is apparent that he also had observed GMG cells.

Laboratory experiences as a part of most U.S. high school science

curricula have been taken for granted for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all students have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum-and how that can be accomplished.

Cutting-edge investigators review the current status of the entire field, from the biology of MMPs through the current clinical studies. The authors include many leading scientists from pharmaceutical companies who present all the latest concepts and results on the preferred design strategies for MMP inhibitors, their molecular mechanisms, and their substrates. In addition, they fully describe their personal research on specific MMP inhibitors, detailing vanguard design strategies, their in vitro activity, the outcome of animal model studies and, where available, their toxicology, safety, efficacy in human clinical trials. Comprehensive and state-of-the-art, *Matrix Metalloproteinase Inhibitors in Cancer Therapy* offers basic and clinical investigators alike a richly informative summary of all the latest research on these powerful new drugs, and their high promise as emerging cancer therapeutics.

Medical Physiology is a new, full-color, comprehensive textbook designed for modern medical school courses in human

physiology. The most up-to-date and beautifully illustrated text on the market, it has a strong molecular and cellular approach, firmly relating the molecular and cellular biological underpinnings of physiology to the study of human physiology and disease. Contributions from leading physiologists ensure authoritative, cutting-edge information, and thorough and consistent editing have produced a readable and student-friendly text.

It's the most elite school sporting event in the country. Nine rowers, 2000 gruelling metres and one chance for glory in the ultimate team sport. Sit forward ... ROW. Tall, gifted and the offspring of Olympians, superstar siblings Leni and Cristian Popescu are set to row Harley Grammar to victory in the Head of the River. With six months until the big race, the twins can't lose. Or can they? When Cristian is seduced by the easy route of performance-enhancing drugs, and Leni is suffocated with self-doubt, their bright futures start to fade. Juggling family, high expectations, study, break-ups, new relationships and wild parties, the pressure starts to build. As the final moments tick down to the big race, who'll make it to the start line? And who'll plummet from grace?

Covering the entire spectrum of this fast-changing field, *Diagnostic Imaging: Chest*, third edition, is an invaluable resource for general radiologists, thoracic radiologists, and trainees—anyone who requires an easily accessible, highly visual reference on today's thoracic imaging. Drs. Melissa L. Rosado-de-Christenson, Santiago Martínez-Jiménez, and their team of highly regarded experts provide up-to-date information on recent advances in technology and the understanding of chest diseases to help you make informed decisions at the point of care. The text is lavishly illustrated, delineated, and referenced, making it a useful learning tool as well as a handy reference for daily practice. - Serves as a one-stop resource for key concepts and information on chest imaging, including a wealth of new material

and content updates throughout - Features more than 2,800 illustrations (full-color drawings, clinical and histologic photographs, and gross pathology images) as well as video clips demonstrating the diaphragmatic paralysis positive sniff test, virtual bronchoscopy fly-through, and more - Features updates from cover to cover including new information on pulmonary manifestations of coronavirus infection/COVID-19 and numerous new chapters throughout - Reflects updates in terminology and imaging findings of common neoplastic disorders (including primary lung cancer and lymphoma), and novel imaging findings of inhalational lung diseases, including those related to vaping - Covers common thoracic malignancies and chest diseases with details on the latest knowledge in the field, including lung screening with low-dose chest CT, approach to the patient with incidentally discovered lung nodules, and updates on the imaging manifestations and management recommendations for common pulmonary infections - Uses bulleted, succinct text and highly templated chapters for quick comprehension of essential information at the point of care

Human Anatomy, Media Update, Sixth Edition builds upon the clear and concise explanations of the best-selling Fifth Edition with a dramatically improved art and photo program, clearer explanations and readability, and more integrated clinical coverage. Recognized for helping students establish the framework needed for understanding how anatomical structure relates to function, the text's engaging descriptions now benefit from a brand-new art program that features vibrant, saturated colors as well as new side-by-side cadaver photos. New Focus figures have been added to help students grasp the most difficult topics in anatomy. This updated textbook includes access to the new Practice Anatomy Lab(tm) 3.0 and is also accompanied by MasteringA&P(tm), an online learning and assessment system proven to help students learn. In addition to providing instructors and students with access to PAL 3.0, MasteringA&P for Marieb's Human Anatomy Media Update, also features assignable content including: quizzes and lab practicals from PAL 3.0 Test Bank, activities for A&P Flix for anatomy, art activities, art questions, chapter test questions, reading quiz questions, clinical questions, and Test Bank from the textbook.

This important new publication summarises the recent exciting advances in screening for Down's syndrome. It addresses

important clinical questions such as: risk assessment, who to screen, when to screen, which techniques to use, and the organisation of screening programmes nationally and internationally. An international and authoritative team of authors has been invited to assess the latest developments in this rapidly advancing area. The volume provides a critical and much needed evaluation of the potential and limitations of new and established techniques for screening for Down's syndrome. It will serve as an essential source of information for all those involved in pre-natal diagnosis and the provision of obstetric care.

Les Travaux dirigés (TD) et les Travaux pratiques (TP) en particulier sont l'occasion de favoriser l'autonomie dans le travail et de développer une analyse et une réflexion critique. Cette pochette de fiches détachables, destinée aux élèves de Terminale ST2S, leur permet de réaliser les TD et les TP en lien avec l'actualité sanitaire et sociale, encadrés par leur enseignant. Elle peut aussi servir de support à un travail personnel, voire à des évaluations. La première partie offre 13 TD, abordant toutes les notions du pôle : "Institutions et dispositifs sanitaires et sociaux - B - Quels dispositifs de protection sociale ? C - Quels dispositifs pour la mise en œuvre des politiques sociales ?". Chaque fiche présente : les objectifs du TD ; l'indication du TP correspondant ; des exercices pour faciliter l'acquisition de connaissances et approfondir ou illustrer certains aspects du programme. La seconde partie offre 13 TP permettant l'acquisition des méthodologies appliquées au secteur sanitaire et social (pôle "Méthodologie appliquée"), en transversalité avec le pôle précédent. Chaque fiche présente : les objectifs du TP ; des exercices d'application pour acquérir les connaissances spécifiques à ce pôle.Grâce à cet ouvrage, les programmes sont abordés dans une approche dynamique et concrète, prenant en compte les nouvelles problématiques et les évolutions à venir.

Humans are mammals. Most of us appreciate that at some level. But what does it mean for us to have more in common with a horse and an elephant than we do with a parrot, snake or frog? After a misdirected football left new father Liam Drew clutching a uniquely mammalian part of his anatomy, he decided to find out

more. Considering himself as a mammal first and a human second, Liam delves into ancient biological history to understand what it means to be mammalian. In his humorous and engaging style, Liam explores the different characteristics that distinguish mammals from other types of animals. He charts the evolution of milk, warm blood and burgeoning brains, and examines the emergence of sophisticated teeth, exquisite ears, and elaborate reproductive biology, plus a host of other mammalian innovations. Entwined are tales of zoological peculiarities and reflections on how being a mammal has shaped the author's life. I, Mammal is a history of mammals and their ancestors and of how science came to grasp mammalian evolution. And in celebrating our mammalian-ness, Liam Drew binds us a little more tightly to the five and a half thousand other species of mammal on this planet and reveals the deep roots of many traits humans hold dear.

The field of cell biology is so vast and changing so rapidly that teaching it can be a daunting prospect. The first edition of The Cell: A Molecular Approach, published in 1997, offered the perfect solution for teachers and their students-current, comprehensive science combined with the readability and cohesiveness of a single- authored text. Designed for one-semester introductory cell biology courses, this book enabled students to master the material in the entire book, not simply to sample a small fraction from a much larger text. The new second edition of The Cell retains the organization, themes, and special features of the original, but has been completely updated in major areas of scientific progress, including genome analysis; chromatin and transcription; nuclear transport; protein sorting and trafficking; signal transduction; the cell cycle; and programmed cell death. With a clear focus on cell biology as an integrative theme, topics such as developmental biology, plant biology, the immune system, the nervous system, and muscle physiology are covered in their broader biological context. Each chapter includes a brief chapter outline, bold-faced key terms, and chapter-end questions with answers in the back of the book.
