~~Reversible reaction and dynamic equilibrium | Chapter 1 | Lecture 2 Part 1~~ Equilibrium A Reversible Reaction Pogil Equilibrium A Reversible Reaction Pogil When a reversible reaction reaches equilibrium and the concentrations of the products are significantly higher than those of the reactants, we say the reaction "favors the products." Likewise, if the concentrations of the reactants are higher at equilibrium we say the reaction "favors the reactants." Equilibrium A Reversible Reaction Pogil Answers When a reversible reaction reaches equilibrium and the concentrations of the products are significantly higher than those of the reactants, we say the reaction "favors the products." Likewise, if the concentrations of the reactants are higher at

equilibrium we say the reaction “favors the reactants.” 20. Equilibrium - Science Done Wright How fast a reaction reaches this equilibrium state is a matter of kinetics. • An equilibrium state results when a reaction is reversible. At equilibrium the concentrations of reactants and products is still changing, however, the rate of the forward reaction (k_f) is equal to the rate of the reverse reaction (k_r) in what is described as a dynamic equilibrium such that no change in their concentrations is observed. CHEMICAL EQUILIBRIUM (ICE METHOD) Equilibrium in chemical reactions is dynamic because the forward and reverse reactions are occurring continuously and simultaneously at the same rates. Placing a stress on any equilibrium

system, whether it is chemical, biological, societal, environmental, or personal, causes the equilibrium position to change. Equilibrium and Le Chatelier’s Principle 1. Consider the following reversible reaction, which is believed to proceed by a one-step mechanism in each direction: $2\text{NO}_2 \rightleftharpoons \text{N}_2\text{O}_4$ k_f k_r a. Write the rate expression for each direction. $\text{rate}_f = k_f[\text{NO}_2]^2$ $\text{rate}_r = k_r[\text{N}_2\text{O}_4]$ b. At equilibrium, the net rate of the reaction is zero, because the rate of the forward reaction is exactly equal to that of the reverse reaction. Kinetics to Equilibrium - Solutions Chem 116 POGIL Worksheet - Week 7 Kinetics to Equilibrium Why? Most chemical reactions are reversible. This means that once products are formed, they can react to reform the reactants. If we allow a reaction to run

long enough, it may reach a state where the rate of the forward reaction (forming products) is equal to the rate of the reverse reaction. Kinetics to Equilibrium Why? Chem 116 POGIL Worksheet - Week 8 Kinetics to Equilibrium Why? Most chemical reactions are reversible. This means that once products are formed, they can react to reform the reactants. If we allow a reaction to run long enough, it may reach a state where the rate of the forward reaction (forming products) is equal to the rate of the reverse reaction. Kinetics to Equilibrium Why? $\Delta G < 0$ Equilibrium- Reversible reaction. -Does not go to completion. -No net change. No change in amount of products and reactants. Occurring at the same rate ~ Dynamic equilibrium (forward and backward

reaction at same rate). Le Chatelier's Principle " When a system at equilibrium is changed, the system adjusts to absorb that change." Oxidation and Reduction Oxidation = Loss. $\Delta G < 0$ Equilibrium Reversible reaction Does ... Do reversible reactions that favor the products have an equilibrium product to reactant ratio greater than, less than, or equal to one? What is "equal" when a reaction reaches equilibrium? Using data from Model 2, graph the moles of A and B each minute. Mrs. Wentzel's Chemistry Classes - Home Equilibrium Constant Khan Academy: Reactions in Equilibrium Monday 10/16 -Notes: Equilibrium and Equilibrium Constants Powerpoint (Slides 1-14) -Problem Set: Equilibrium Expressions and constants Answer Key - Watch: Reaction Quotient Tuesday 10/17

-POGIL Unit 3: Equilibrium - Ms. Burlison
 The introduction to the POGIL is all that is appropriate to my students, as we will be teaching equilibrium without involving calculations of the equilibrium constant. The remainder of the POGIL activity is very math heavy. Throughout this lesson, students will be asking questions (SP1) about the reactions they observe.
 Ninth grade Lesson Introduction to Chemical Equilibrium (seriously...read this carefully)
 Reversible reactions never come to an end: they just reach equilibrium. That is, they reach a point when there is no further change in concentrations of reactants or products.
 4 - SCIENCE Equilibrium in chemical reactions is dynamic because the forward and reverse reactions are occurring continuously and

simultaneously at the same rates. Placing a stress on any equilibrium system, whether it is chemical, biological, societal, environmental, or personal, causes the equilibrium position to change.
