An 'evidence-based' approach to health care is growing in importance, but it is difficult for students and professionals to keep up-to-date with a vast and changing knowledge base. Even more challenging is the need to apply the evidence to everyday nursing practice. This book helps the reader to do just that.

Bringing together a range of contributors, it explores some of the latest research in children's nursing. A particular feature is the application of the findings presented to nursing practice.

Nursing can be nuts. On a twelve-hour shift, the last thing most nurses want to do is sit down and draft a lengthy note describing the craziness that occurred. Written by a nurse, for nurses, this book is chock full of narrative note examples describing hypothetical situations to help you describe the, well, the indescribable. Some shifts are just like that!
