Surgery Review is a comprehensive review presented in a unique format. Topics are introduced with case presentations and relevant diagnostic and management information is then summarized in easy-to-remember capsules with exam pearls interjected throughout. All areas of general surgery are covered, including the subspecialty areas. There is also a section on basic science found on the in-training exam and written boards, and a section of anesthesia, trauma, and critical care. Unlike many other books, General Surgery Review excludes controversial

management in order to present an easy-to-remember foundation of knowledge. Thus, the book focuses on "the basics" to provide the reader with a broad command of the field. This title is indispensable to residents studying for in-training exam or boards, and is also popular with practitioners preparing for their recertification exam in general surgery.

Designed to help medical educators implement better assessment methods, tools, and models directly into training programs, *Practical Guide to the Evaluation of Clinical Competence*, 2nd Edition, by Drs. Eric S. Holmboe, Steven J. Durning, and Richard E. Hawkins, is a hands-on, authoritative guide to outcomes-based assessment in clinical education.

National and international experts present an organized, multifaceted approach and a diverse combination of methods to help you perform effective assessments. This thoroughly revised edition is a valuable resource for developing, implementing, and sustaining effective systems for evaluating clinical competence in medical school, residency, and fellowship programs.

 Advances in surgical technique and broadening indications for complex gastrointestinal procedures, surgical management of thoracic, hepato-pancreato-biliary, and colorectal diseases continues to evolve, but morbidity continues to be a persistent problem. This book provides a comprehensive, state-of-the-art, definitive reference for the diagnosis and management of difficult-to-manage complications following advanced gastrointestinal surgery. All chapters are written by experts in their field and include the most up-to-date clinical information from national and world leaders in their respective discipline. The text provides a practical, clinically useful guide that reviews risk factors for these complications and offers key information on how to avoid potentially high morbidity events in the peri-operative period. It also discusses the management of these problems when they do occur. With its helpful guidelines and “tricks of the trade” to avoid potential complications, this book is essential to all medical professions treating such patients. *Gastrointestinal Surgery: Management of Complex Perioperative Complications* is of great value and utility for general surgeons, thoracic surgeons, upper gastrointestinal surgeons, colorectal surgeons, hepato-pancreato-biliary surgeons, surgical oncology fellows, thoracic surgery fellows and upper level residents in general surgery.

In the present volume, for the first time, a connected history of the Chauhans, from their beginnings in Bhrgukachchha in eight century A.D. to the time of Ala-ud-din Khalji and Hammira in the fourteenth century has been presented. The author has shown that the Agnikula myth goes back to the Ramayana and is, in fact, traditional to Aryan Hindus. He also establishes conclusively that contrary to the common belief that India fell an easy prey to Muslim invaders, and the resistance of the Hindu rulers broke down after the defeat of Prthviraja, the descendants of the Chauhan Emperor, even after they lost Ajmer, continued to fight with determination for two hundred years. Considerable new light is also thrown on the relations between the Chaulukya Empire and the Chauhans of Sakambhari, especially during the reigns of Siddharaja and Kumarapala. A valuable portion of the book is devoted to the social and economic condition of the Chauhan territory during the eleventh, twelfth and thirteenth centuries. The enumeration and identification of the towns and villages in the country collected from the literature of the time is especially important. The names of the coins in use, the weights and

measures will also be found very useful.

Schwartz's Principles of Surgery, 10th edition Elsevier Health Sciences

Immunology is a rapidly developing subject. The contributors in

this book present some components of immunological knowledge which relate to the present and the possible future practice of surgery. Aspects of cellular and humoral immunity necessary for understanding are described and consideration given to the mechanisms underlying immunological diseases. Whilst the original interest in immune response was related to microbial resistance, the recent impetus to surgical immunology has been the resurgence of organ grafting. Separate sections of the book deal with clinical organ transplantation, the allograft reaction, graft rejection and immunogenetics. A pre-requisite of successful organ grafting is suppressive control of immune responses. Approaches to conventional immunosuppression and specific non-reactivity are therefore considered. One method of cancer therapy is strengthening of the host's immune responses. Both experimental and clinical immunotherapy are discussed and components of tumour immunology necessary for their rational understanding are dealt with separately. Successful immunotherapy requires monitoring of immune responses but another method for improving results of cancer treatment is earlier diagnosis by immunological methods. The book is aimed at practising surgeons who want to know the relevance of immunology to clinical surgery and laboratory scientists needing to understand the applications of their basic concepts. I am very grateful both to the authors for their contributions and the editorial staff of MTP Press Limited, for their considerable help.

General Surgery Board Review Lippincott Williams & Wilkins
This book encompasses the theoretical and practical aspects of surgical ethics, with a focus on the application of ethical standards to everyday surgical practice and the resolution of ethical conflicts in the surgical arena. It provides surgeons (both prospective and practicing) in the different surgical fields with deep, practical insights into the topic. A 21st century surgeon requires complete competence (superb clinical skills, expert surgical decision-making and outstanding performance and technical skills) as well as solid ethical values. Ethics are placed at the core of surgical professionalism, so surgeons must be not only proficient and expert but also ethically and morally reliable. Surgical decision-making can be considered as a two-step process: the “how to treat” aspect is a matter of surgical science, while “why to treat” issues are a matter of surgical ethics and are based on ethical principles. As such, every surgeon should have a moral compass to guide his or her actions, always placing the welfare and rights of the patients above their own. The book provides invaluable background and insights for solving the ethical conflicts surgeons around the globe encounter in their daily practice. Each chapter will also include features such as key point summaries in the beginning of the chapters, explanatory boxes, a glossary and suggested readings. *Surgical Ethics - Principles and Practice* is an authoritative work in the field designed for experienced surgeons, surgical residents, and fellows, all of whom are confronted with ethics issues and

conflicts in practice.

Educational Psychology Series: Evaluating the Quality of Learning: The SOLO Taxonomy (Structure of the Observed Learning Outcome) focuses on the approaches, methodologies, and techniques employed in the valuation of the quality of learning. The publication first offers information on the quality and quantity of learning and origin and description of the Structure of the Observed Learning Outcome (SOLO) taxonomy. Discussions focus on general intellectual development and the growth of quality; some assumptions and applications of stage theory; from developmental stage to levels of learning quality; and general intellectual development and the growth of quality. The text then examines the teaching of history, elementary mathematics, English, and geography. Topics include interpreting

a map and drawing conclusions, explaining a natural phenomenon, appreciation of poetry, implications for the teaching of history, English, and mathematics, numbers and operations, and general application of SOLO to history. The manuscript takes a look at modern languages, place of the

taxonomy in instructional design, and some methodological considerations. Concerns include alternative formats for obtaining SOLO responses, instructional processes, curriculum analysis, remediation, and teacher intentions. The publication is a vital source of data for educators interested in the SOLO taxonomy.
