A Social Accounting Matrix (SAM) is a representation of an economy that shows the circular flow of all transfers and real transactions between sectors and institutions. The SAM, which is a square matrix, describes the flows of incomes from activities, taking the form of factor remunerations, that are consequently received by the households for consumption on goods and services. The accounts in the SAM are the production activities, commodities, institutions, and factors of production. According to data availability, the production activities can be further disaggregated to include more detailed information on sub-sectoral or regional production. Similarly, the factors of production could be differentiated by the level of skills or the location of employment. Households can be disaggregated by income quintiles or by rural and urban residence.

The Central Agency for Public Mobilization and Statistics (CAPMAS) is pleased to present the first regionalized social accounting matrix (SAM) for Egypt. This SAM marks a major milestone in "localizing" development research and policy in Egypt and is expected to be most valuable for the development, implementation, and assessment of Egypt's national and local development plans, like Egypt's Sustainable Development Strategy 2030. In addition to standard SAMs, which combine many national datasets from institutions such as Central Banks, Ministries of Finance and Agriculture, and Statistical Bureaus, this regionalized SAM makes extensive use of sub-national level information such as the Economic Survey and Household Income and Expenditure Survey (HIECS) produced by CAPMAS, regional GDP estimates by the Ministry of Planning, Monitoring and Administrative Reform, and the Agricultural Bulletins with information at the Governorate level produced by the Ministry of Agriculture and Land Reclamation. With this data it becomes possible to provide a detailed, socioeconomic status update for different regions within Egypt. As such, the disaggregated SAM allows for analyzing developmental issues at regional level and to better understand the potential impacts of policy changes at the

local level.

America's higher education system is failing its students. In the space of a generation, we have gone from being the best-educated society in the world to one surpassed by eleven other nations in college graduation rates. Higher education is evolving into a caste system with separate and unequal tiers that take in students from different socio-economic backgrounds and leave them more unequal than when they first enrolled. Until the 1970s, the United States had a proud history of promoting higher education for its citizens. The Morrill Act, the G.I. Bill and Pell Grants enabled Americans from across the income spectrum to attend college and the nation led the world in the percentage of young adults with baccalaureate degrees. Yet since 1980, progress has stalled. Young adults from low to middle income families are not much more likely to graduate from college than four decades ago. When less advantaged students do attend, they are largely sequestered into inferior and often profit-driven institutions, from which many emerge without degrees and shouldering crushing levels of debt. In *Degrees of Inequality*, acclaimed political scientist Suzanne Mettler explains why the system has gone so horribly wrong and why the American Dream is increasingly out of reach for so many. In her eye-opening account, she illuminates how political partisanship has overshadowed America's commitment to equal access to higher education. As politicians capitulate to corporate interests, owners of for-profit colleges benefit, but for far too many students, higher education leaves them with little besides crippling student loan debt. Meanwhile, the nation's public universities have shifted the burden of rising costs onto students. In an era when a college degree is more linked than ever before to individual and societal well-being, these pressures conspire to make it increasingly difficult for students to stay in school long enough to graduate. By abandoning their commitment to students, politicians are imperiling our highest ideals as a nation. *Degrees of Inequality* offers an impassioned call to reform a higher education system that has come to exacerbate, rather than mitigate, socioeconomic inequality in America.
