Tropical forests are an
undervalued asset in
meeting the greatest
global challenges of our
time—averting climate
change and promoting
development. Despite
their importance, tropical
forests and their
ecosystems are being
destroyed at a high and
even increasing rate in
most forest-rich countries.
The good news is that the

science, economics, and
politics are aligned to
support a major
international effort over
the next five years to
reverse tropical
deforestation. Why
Forests? Why Now?
synthesizes the latest
evidence on the
importance of tropical

this textbook thoroughly
explains the principles of
macroeconomics. It
provides insights into the
important macroeconomic
issues, such as
determination of output,
employment, interest
rates and inflation. This
textbook discusses
Classical and Keynesian
theories of
macroeconomics as well

as aptly incorporates
Post-Keynesian
developments in various
aspects of
macroeconomics. Further
it discusses, at
appropriate places, the
relevance and
applicability of various
macroeconomic theories
for the developing
countries. This textbook
also explains and critically
evaluates the post-
Keynesian theories of
consumption function
namely, Kuznet's
consumption function,
Modigliani's life cycle
hypothesis and much
more.

for posttraumatic stress disorder (PTSD). Written by the treatment's developers, the book includes session-by-session guidelines for implementation, complete with extensive sample dialogues and 40 reproducible client handouts. It explains the theoretical and empirical underpinnings of CPT and discusses how to adapt the approach for specific populations, such as combat veterans, sexual assault survivors, and culturally diverse clients. The large-size format facilitates photocopying and day-to-day use. Purchasers also get access to a Web page where they can download and print the reproducible materials. CPT is endorsed by the U.S. Departments of Veterans Affairs and Defense, the International Society of Traumatic Stress Studies, and the U.K. National Institute for Health and Care Excellence (NICE) as a best practice for the treatment of PTSD.

Advanced Management Accounting With Quick Revision (For CA-Final) (Combo) S. Chand Publishing
As chief test pilot for BAC in the 1960s, Brian Trubshaw was closely involved with the Anglo-French Concorde program and flew the supersonic aircraft on its maiden flight in 1969, remaining a key member of the test program after the aircraft entered airline service in 1967. This close association with Concorde affords him his unique position in offering the inside story of the aircraft, from the early days of its planning in the 1950s, through design and pre-flight testing, maiden flight and demonstrations, to certification and airline service. He also covers many other aspects of the program, from the

cripplingly high development and construction costs to sales and post-delivery modification. The book reviews Concorde's 43-year service record with British Airways and Air France, along with the prospects for its continuation in airline service into the 21st century. The author also offers his views on the next generation of supersonic passenger transport aircraft.

Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public

health imperative. *Improving Diagnosis in Health Care*, a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors"has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

Cognitive Processing Therapy for PTSD S. Chand Publishing

Today, as never before, healthcare has the ability to enhance the quality and duration of life. At the same time, healthcare has become so costly that it can easily bankrupt governments and impoverish individuals and families. Health services research is a highly multidisciplinary field, including such areas as health administration, health economics, medical sociology, medicine, , political science, public health, and public policy. The Encyclopedia of Health Services Research is the first single reference source to capture the diversity and complexity of the field. With more than 400 entries, these two volumes investigate the relationship between the factors of cost, quality, and access to healthcare and their impact upon medical outcomes such as death, disability, disease, discomfort, and dissatisfaction with care. Key Features Examines the growing healthcare crisis facing the United States Encompasses the structure, process, and outcomes of healthcare Aims to improve the equity, efficiency, effectiveness, and safety of healthcare by

influencing and developing public policies Describes healthcare systems and issues from around the globe Key Themes Access to Care Accreditation, Associations, Foundations, and Research Organizations Biographies of Current and Past Leaders Cost of Care, Economics, Finance, and Payment Mechanisms Disease, Disability, Health, and Health Behavior Government and International Healthcare Organizations Health Insurance Health Professionals and Healthcare Organizations Health Services Research Laws, Regulations, and Ethics Measurement; Data Sources and Coding; and Research Methods Outcomes of Care Policy Issues, Healthcare Reform, and International Comparisons Public Health Quality and Safety of Care Special and Vulnerable Groups The Encyclopedia is designed to be an introduction to the various topics of health services research for an audience including undergraduate students, graduate students, and general readers seeking non-technical descriptions of the field and its practices. It is also useful for healthcare

practitioners wishing to stay abreast of the changes and updates in the field. *Concorde* World Health Organization In the years since it first published, *Neuroeconomics: Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics. The second edition, a nearly complete revision of this landmark book, will set a new standard. This new edition features five sections designed to serve as both classroom-friendly introductions to each of the major subareas in neuroeconomics, and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline. The first of these sections provides useful introductions to the disciplines of microeconomics, the psychology of judgment and decision, computational neuroscience, and anthropology for scholars and students seeking interdisciplinary breadth. The second section provides an overview of how human and animal

preferences are represented in the mammalian nervous systems. Chapters on risk, time preferences, social preferences, emotion, pharmacology, and common neural currencies—each written by leading experts—lay out the foundations of neuroeconomic thought. The third section contains both overview and in-depth chapters on the fundamentals of reinforcement learning, value learning, and value representation. The fourth section, "The Neural Mechanisms for Choice, integrates what is known about the decision-making architecture into state-of-the-art models of how we make choices. The final section embeds these mechanisms in a larger social context, showing how these mechanisms function during social decision-making in both humans and animals. The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field. A clear explanatory style and a single expository voice characterize all chapters, making core issues in economics, psychology, and neuroscience accessible

to scholars from all disciplines. The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general. - Editors and contributing authors are among the acknowledged experts and founders in the field, making this the authoritative reference for neuroeconomics - Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers - Introductory chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field - Detailed chapters on subjects that include reinforcement learning, risk, inter-temporal choice, drift-diffusion models, game theory, and prospect theory make this an invaluable reference - Published in association with the Society for Neuroeconomics—www.neuroeconomics.org - Full-color presentation throughout with numerous carefully selected illustrations to highlight key concepts [Introductory Micro and Macro Economics S.](#)

The understanding of how to reduce risk factors for mental disorders has expanded remarkably as a result of recent scientific advances. This study, mandated by Congress, reviews those advances in the context of current research and provides a targeted definition of prevention and a conceptual framework that emphasizes risk reduction. Highlighting opportunities for and barriers to interventions, the book draws on successful models for the prevention of cardiovascular disease, injuries, and smoking. In addition, it reviews the risk factors associated with Alzheimer's disease, schizophrenia, alcohol abuse and dependence, depressive disorders, and conduct disorders and evaluates current illustrative prevention programs. The models and examination provide a framework for the design, application, and evaluation of interventions intended to prevent mental disorders and the transfer of knowledge about prevention from research to clinical practice. The book presents a focused research agenda, with

recommendations on how to develop effective intervention programs, create a cadre of prevention researchers, and improve coordination among federal agencies.

In recent years, high prices of pharmaceutical products have posed challenges in high- and low-income countries alike. In many instances, high prices of pharmaceutical products have led to significant financial hardship for individuals and negatively impacted on healthcare systems' ability to provide population-wide access to essential medicines.

Pharmaceutical pricing policies need to be carefully planned, carried out, and regularly checked and revised according to changing conditions. Strong, well-thought-out policies can guide well-informed and balanced decisions to achieve affordable access to essential health products. This guideline replaces the 2015 WHO guideline on country pharmaceutical pricing policies, revised to reflect the growing body of literature since the last evidence review in 2010.

This update also recognizes country experiences in managing the prices of pharmaceutical products.
