The exponential growth and development of modern technologies in all sectors has made it increasingly difficult for students, teachers and teacher educators to know which technologies to employ and how best to take advantage of them. The Routledge

Handbook of Language Learning and Technology brings together experts in a number of key areas of development and change, and opens the field of language learning by exploring the pedagogical importance of technological innovation. The handbook is structured around six themes: historical and conceptual contexts core issues interactive and collaborative technologies for language learning corpora and data driven learning gaming and language learning purpose designed language learning resources. Led by fundamental concepts, theories and frameworks from language learning and teaching research rather than by specific technologies, this handbook is the essential reference for all students, teachers and researchers of Language Learning and TESOL. Those working in the areas of Applied Linguistics, Education and Media Studies will also find this a valuable book.

Working with Specialized Language: a practical guide to using corpora introduces the principles of using corpora when studying specialized language. The resources and techniques used to investigate general language cannot be easily adopted for specialized investigations. This book is designed for users of language for special purposes (LSP). Providing guidelines and practical advice, it enables LSP users to design, build and exploit corpus resources that meet their specialized language needs. Highly practical and accessible, the book includes exercises, a glossary and an appendix describing relevant resources and corpus-analysis software. Working with Specialized Language is ideal for translators, technical writers and subject specialists who are interested in exploring the potential of a corpus-based approach to teaching and learning LSP.

This book deals with methods for solving nonstiff ordinary differential equations. The first chapter describes the historical development of the classical theory, and the second chapter includes a modern treatment of Runge-Kutta and extrapolation methods. Chapter three begins with the classical theory of multistep methods, and concludes with the theory of general linear methods. The reader will benefit from many illustrations, a historical and didactic approach, and computer programs which help him/her learn to solve all kinds of ordinary differential equations. This new edition has been rewritten and new material has been included.

In recent years there has been increasing interest in the development and use of bilingual and multilingual corpora. As Karin Aijmer writes in this book, 'The contrastive or comparative perspective ... makes it possible to dig deeper and to ask new questions about the relationship between languages with the aim of sharpening our conceptions of cross-linguistic correspondences and adding to our knowledge of the languages compared.' The papers in this volume are a showcase of the great variety of purposes to which bilingual and multilingual corpora can be put. They do not only lend themselves to descriptive and applied approaches, but are also suitable for theory-oriented studies. The range of linguistic phenomena covered by the various approaches is very wide; the papers focus on fields of research like syntax, discourse, semantics, information structure, lexis, and translation studies. The range of languages studied comprises English, Norwegian, Swedish, German, Dutch, and Portuguese. In addition to purely linguistic papers, there are contributions on computer programs developed for the compilation and use of bilingual and multilingual corpora.

A book for learners of all ages containing the best and most updated advice on learning from neuroscience and cognitive psychology. Do you spend too much time learning with disappointing results? Do you find it difficult to remember what you read? Do you put off studying because it's boring and you're easily distracted? This book is for you. Dr. Barbara Oakley and Olav Schewe have both struggled in the past with their learning. But they have found techniques to help them master any material. Building on insights from neuroscience and cognitive psychology, they give you a crash course to improve your ability to learn, no matter what the subject is. Through their decades of writing, teaching, and research on learning, the authors have developed deep connections with experts from a vast array of disciplines. And it's all honed with feedback from thousands of students who have themselves gone through the trenches of learning. Successful learners gradually add tools and techniques to their mental toolbox, and they think critically about their learning to determine when and how to best use their mental tools. That allows these learners to make the best use of their brains, whether those brains seem "naturally" geared toward learning or not. This book will teach you how you can do the same.

Corpus-aided language pedagogy is one of the central application areas of corpus methodologies, and a test bed for theories of language and learning. This volume provides an overview of current trends, offering methodological and theoretical position statements along with results from empirical studies. The relationship between corpora and learning is examined from complementary perspectives — the study of learner language, the didactic use of corpus findings, and the interaction between corpora and their users. Reflections on current theory and technology open and close the volume. With its focus on the learner and the learning setting, *Corpora and Language Learners* is addressed to corpus linguists with an interest in learner language, applied linguists wishing to expand their understanding of corpora and their pedagogic potential, and language teachers wishing to critically assess the relevance of work in this field. This volume grew out of selected presentations at the 5th Teaching and Language Corpora conference in Bertinoro, Italy.

The Collected Works. Illustrated IOS Press

This volume takes stock of current research in contrastive lexical studies. It reflects the growing interest in corpus-based approaches to the study of lexis, in particular the use of multilingual corpora, shared by researchers working in widely differing fields — contrastive linguistics, lexicology, lexicography, terminology, computational linguistics and machine translation. The articles in the volume, which cover a wide diversity of languages, are divided into four main sections: the exploration of cross-linguistic equivalence, contrastive lexical semantics, corpus-based multilingual lexicography, and translation and parallel concordancing. The volume also contains a lengthy introduction to recent trends in contrastive lexical studies written by the editors of the volume, Bengt Altenberg and Sylviane Granger.

Language and literature teaching are a keystone in the age of STEM, especially when dealing with minority communities. Practical methodologies for language learning are essential for bridging the cultural gap. *Teaching Language and Literature On and Off-Canon* is a critical research publication that provides a multidisciplinary, multimodal, and heterogenous perspectives on the applications of language learning and teaching practices for commonly studied languages, such as Spanish, English, and French, and less-studied languages, such as Latin, Gaelic, and ancient Semitic languages. Highlighting topics such as language acquisition, artistic literature, and minority languages, this book is essential for language teachers, linguists, academicians, curriculum designers, policymakers, administrators, researchers, and students.

This book is open access under a CC BY 4.0 license. This easy-to-read book introduces the basics of solving partial differential equations by means of finite difference methods. Unlike many of the traditional academic works on the topic, this book was written for practitioners. Accordingly, it especially addresses: the construction of finite difference schemes, formulation and implementation of algorithms, verification of implementations,

analyses of physical behavior as implied by the numerical solutions, and how to apply the methods and software to solve problems in the fields of physics and biology.

This Handbook offers a comprehensive grounding in key issues of corpus-informed translation studies, while showcasing the diverse range of topics, applications, and developments of corpus linguistics. In recent decades there has been a proliferation of scholarly activity that applies corpus linguistics in diverse ways to translation studies (TS). The relative ease of availability of corpora and text analysis programs has made corpora an increasingly accessible and useful tool for practising translators and for scholars and students of translation studies. This Handbook first provides an overview of the discipline and presents detailed chapters on specific areas, such as the design and analysis of multilingual corpora; corpus analysis of the language of translated texts; the use of corpora to analyse literary translation; corpora and critical translation studies; and the application of corpora in specific fields, such as bilingual lexicography, machine translation, and cognitive translation studies. Addressing a range of core thematic areas in translation studies, the volume also covers the role corpora play in translator education and in aspects of the study of minority and endangered languages. The authors set the stage for the exploration of the intersection between corpus linguistics and translation studies, anticipating continued growth and refinement in the field. This volume provides an essential orientation for translators and TS scholars, teachers, and students who are interested in learning the applications of corpus linguistics to the practice and study of translation.

The use of corpus data in languages other than English has become increasingly important in recent years, and as a result has given rise to a growing body of research and applications in multilingual corpus linguistics. This book collects together a selection of papers which have made use of multilingual corpus data in language teaching, as well as linguistic research. The corpora described in this book include data in a variety of languages, including Swedish, Chinese, German and Italian, and the contributors include well known scholars in the fields of corpus linguistics and corpus-based language teaching.

The Open Access version of this book, available at <https://www.taylorfrancis.com/books/e/9781351049139>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license. This volume offers an exhaustive look at the latest research on metacognition in language learning and teaching. While other works have explored certain notions of metacognition in language learning and teaching, this book, divided into theoretical and empirical chapters, looks at metacognition from a variety of perspectives, including metalinguistic and multilingual awareness, and language learning and teaching in L2 and L3 settings, and explores a range of studies from around the world. This allows the volume to highlight a diverse set of methodological approaches, including blogging, screen recording software, automatic translation programs, language corpora, classroom interventions, and interviews, and subsequently, to demonstrate the value of metacognition research and how insights from such findings can contribute to a greater understanding of language learning and language teaching processes more generally. This innovative collection is an essential resource for students and scholars in language teaching pedagogy, and applied linguistics.

Working with Specialized Language John Benjamins Publishing

This pioneering piece of research on the situated study of language issues in the context of forced migration provides interdisciplinary insights into language as learned, used and lived by 12 Congolese refugees in Norway. It offers an innovative contribution to the field of SLA by bringing together structural, cognitive, social and critical approaches to data collected among the same individuals, these individuals being underrepresented

within the field of SLA research as both refugees and learners whose experiences with language stem from the Global South. Their histories of mobility and their learning contexts are rarely reflected in theories and concepts from the Global North and this book thus makes a much-needed contribution to the field.

Corpus Linguistics 25 Years on Routledge

The papers published in this volume were originally presented at the Sixth International Conference on Teaching and Language Corpora (4-7 July 2004 Granada, Spain) and reflect the latest developments that have taken place in the field of the teaching applications of text corpora, with a special emphasis on their use in the foreign language classroom. The book is divided into three main sections. The first section sets the scene for what this collection of essays aims to be. It deals with the issue of what corpus linguistics can do not only for the understanding of the nature of language itself but also for so fundamental and miraculous a matter such as language learning and language acquisition. The second section tackles the issues of corpus design and corpus exploitation and provides the reader with a great variety of evidence in favour of corpora exploitation for the building of a successful teaching environment. The final section deals with practical applications of corpora in the foreign language classroom. Although each of the papers here reports particular experiences in very different teaching and learning contexts, as a whole they show that corpora can be used on the spot in a language teaching context by teachers and learners without extensive training in computational tools, and studies of linguistics features can be tailored to specific pedagogic context and learning requirements. The book represents a solid contribution to linguistic studies and language teaching and it is a good example of the diversity of the scientific lines in which corpus linguistics is involved at the present moment.
