Fundamental Accounting Principles Springer Science & Business Media
 The second edition of Dr. Demski's book reflects his experiences teaching undergraduates, masters and doctoral students. He emphasizes economic fundamentals as the guiding foundation coupled with an artful application of those fundamentals. This applies to product costing, decision making and evaluation art. Dr. Demski has also removed a great deal of traditional minutiae, in order to keep this theme in constant focus. This thematic approach, in his experience,

works in dramatic fashion, and stands in sharp contrast to more traditional presentations of this material. The book is not only for use as a textbook but also as a reference book.

 While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of Financial Accounting: IFRS highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have

come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.

Food production remains the highest agricultural priority, subject to the constraint that it be done in harmony with nature, or at least with minimum environmental pollution. The amount of fertilizer applied can be controlled using modern application techniques, including soil and crop management, guaranteeing higher economic profit and lower environmental cost. It is in such a context that the present book addresses the efficient and rational use of mineral and organic fertilizers while preserving environmental quality. The book discusses the impact on surface and groundwaters, soils and crops, and experience of nitrate leaching, denitrification, ammonia volatilization, heavy metal pollution, agricultural and urban waste management, and international and national legislation. Audience:

Agronomists, environmentalists, soil and food chemists, ecologists, policy makers, and managers in the fertilizer industry concerned with the trend of public opinion. *Cost Accounting* Wiley Global Education This seventh edition of the book offers extensive discussion of information, uncertainty, and game theory.

The semi-input-output method was introduced by Professor Jan Tinbergen in the early 1960's in fairly obscure places in the economic literature. The basic idea of the method is a very simple one and does not require lengthy and sophisticated exposition to be understood. This fact, together perhaps with Tinbergen's dislike for very formalized and technical analysis, probably explains why he himself has never given a full exposition and elaboration of this method. Nevertheless, the concept did not remain unnoticed and authors such as B. Hansen and some of Tinbergen's collaborators, in particular P. A. Cornelisse and J. Versluis, have contributed to the elaboration of the method. The present work by Dr. A. Kuyvenhoven, also a long-time collaborator of Tinbergen, has provided us with the first full, and in my opinion definite, exposition of the nature, technique and use of the semi-input output method, now more than 15 years after the launching of the concept.

This book is a result of many years' interest in the economic theory of production, first aroused by the reading of Professor ERICH SCHNEIDER'S classic *Theorie der Produktion*. A grant from the Danish-Norwegian Foundation made it possible for me to spend six months at the Institute of Economics, University of Oslo, where I became acquainted with Professor RAGNAR FRISCH'S penetrating pioneer works in this field and where the plan of writing the present book was conceived. Further studies as a Rockefeller fellow at several American universities, especially an eight months' stay at the Harvard Economic Research Project, and a visit to the Unione Industriale di Torino have given valuable impulses. For these generous grants, and for the help and advice given by the various institutions I have visited, I am profoundly grateful. My sincere thanks are also due to the University of Copenhagen for the exceptionally favourable working conditions which I have enjoyed there, and to the Institute of Economics-especially its director, Professor P. NORREGAARD RASMUSSEN-for patient and encouraging interest in my work. I also wish to thank the Institute's

office staff, Miss G. SUENSON and Mrs. G. STENOR, for their constant helpfulness, and Mrs. E. HAUGEBO for her efficient work in preparing the manuscript, which was completed in the spring of 1965.
