Discover the story of Mary Anning, the world's best-known fossil hunter. As a baby, Mary was struck by lightning, then as a little girl she found a fossilised sea monster, the most important prehistoric discovery of its time. This spectacular tale of a little girl who dared to be different and who followed her dreams will inspire young children. Beautiful illustrations and narrative text help children to learn how Mary discovered new fossils – and how her observations rocked the natural history world. Be inspired by Mary's work as a woman in the field of science – especially as her achievements weren't recognised until after her death. Perfect for kids interested in dinosaurs and rocks, and for parents looking for strong female role models in science. If you liked this, you might like the Anholt's Artists series.

Journey back in time and find out where the dinosaurs roamed. This unique children's atlas explores each continent, revealing fossil sites and stories on every map. Part of the best-selling What's Where on Earth series, this atlas is packed with maps of early Earth and more than 40 profiles of dinosaurs and other prehistoric animals. Stare down a T Rex in North America. Watch out for Velociraptors' slashing claws in the Gobi Desert. Trek across the Siberian tundra and discover a woolly mammoth. This stunning book makes every animal come to life using breathtaking computer-generated imagery. Using specially-commissioned maps, this dinosaur atlas shows you what the world looked like millions of years ago. A modern 3D globe next to each map helps you understand the arrangement of the continents over time and why we find fossils where we do. You can see what palaeontologists have dug up over the centuries in each continent and learn how they put together a picture of the past from a puzzle of ancient clues. Where on Earth Dinosaurs and Other Prehistoric Life reveals the prehistoric world as never before. An essential read for every young dinosaur expert.

Jurassic World: The Ultimate Pop-Up Book Dorling Kindersley Ltd

An investigation of the work and workers in fossil preparation labs reveals the often unacknowledged creativity and problem-solving on which scientists rely. Those awe-inspiring dinosaur skeletons on display in museums do not spring fully assembled from the earth. Technicians known as preparators have painstakingly removed the fossils from rock, repaired broken bones, and reconstructed missing pieces to create them. These specimens are foundational evidence for paleontologists, and yet the work and workers in fossil preparation labs go largely unacknowledged in publications and specimen records. In this book, Caitlin Wylie investigates the skilled labor of fossil preparators and argues for a new model of science that includes all research work and workers. Drawing on ethnographic observations and interviews, Wylie shows that the everyday work of fossil preparation requires creativity, problem-solving, and craft. She finds that preparators privilege their own skills over technology and that scientists prefer to rely on these trusted technicians rather than new technologies. Wylie examines how fossil preparators decide what fossils, and therefore dinosaurs, look like; how labor relations between interdependent yet hierarchically unequal collaborators influence scientific practice; how some museums display preparators at work behind glass, as if they were another exhibit; and how these workers learn their skills without formal training or scientific credentials. The work of preparing specimens is a crucial component of scientific research, although it leaves few written traces. Wylie argues that the paleontology research community's social structure demonstrates how other sciences might incorporate non-scientists into research work, empowering and educating both scientists and nonscientists.

Prehistoric Predators Little Simon

Is today's fast-paced media culture creating a toxic environment for our children's brains? In this landmark, bestselling assessment tracing the roots of America's escalating crisis in education, Jane M. Healy, Ph.D., examines how television, video games, and other components of popular culture compromise our children's ability to concentrate and to absorb and analyze information. Drawing on neuropsychological research and an analysis of current educational practices, Healy presents in clear, understandable language: -- How growing brains are physically shaped by experience -- Why television programs -- even supposedly educational shows like Sesame Street -- develop "habits of mind" that place children at a disadvantage in school -- Why increasing numbers of children are diagnosed with attention deficit disorder -- How parents and teachers can make a critical difference by making children good learners from the day they are born
