Estas notas se han escrito como material didáctico para los estudiantes de ingeniería de perfil mecánico, aunque puede ser utilizada por otras especialidades, sobre todo en los temas fundamentales. En ella se pretende darle al alumno la posibilidad de contrastar con sus notas de clases y así darle la oportunidad de comprender mejor las ideas transmitidas por su profesor. De acuerdo con los objetivos de un aprendizaje adecuado de los fundamentos de la termotransferencia, se proporciona una panorámica general de los aspectos fundamentales de la teoría de los procesos de termotransferencia necesarios para iniciar al alumno en su aplicación práctica. En este sentido el documento puede resultar útil para aquellos que al margen de su lectura, lo empleen adicionalmente para adquirir una formación básica que les permita dominar y conocer las líneas generales de la transferencia de calor, sus aplicaciones y limitantes. No se pretende reemplazar los muchos libros de texto que, desde diferentes ópticas abordan las temáticas relacionadas con la termotransferencia, por el contrario, la idea ha sido componer un resumen introductorio escrito en un lenguaje asequible, que sirva de punto de partida para la consulta de esos libros. Así para facilitar esa labor en las páginas finales se incluye una lista de referencias bibliográficas donde el lector interesado podrá ampliar los conceptos expuestos acá. En esta primera versión, a pesar de que el material fue pensado como un curso introductorio, se incluyen temáticas de elevada importancia en la ingeniería moderna, como son los métodos de análisis sustentados en la aplicación del método de elementos finitos, tanto en sus variantes lineales y no lineales, y sus aplicaciones en la solución numérica de problemas de termotransferencia auxiliado en la implementación de estas modernas técnicas con la ayuda de los modernos ordenadores y de novedosos paquetes de software.
