DARIEN HODGES

Biodiversity Program Study World Bank Publications
 Climate change is a major challenge for agriculture, a vital source of food, income and employment for most of the world's poor. Agricultural investments, as a result, need to become more climate sensitive. This is as true for general agricultural investments focused on development outcomes as for projects specifically addressing climate change adaptation and mitigation. This comprehensive knowledge product provides investment practitioners with practical reference material on integrating climate risk considerations at all stages of the investment project cycle, from design to implementation, monitoring and evaluation. Produced by multidisciplinary teams across FAO, the knowledge product is organized as a compendium of modules and thematic sections. It builds on a 2012 FAO guidance document and draws on the most recent information and data sources, including the latest Intergovernmental Panel on Climate Change (IPCC) reports. It also showcases FAO-developed tools, tested approaches and selected experiences, and discusses climate financing opportunities for agriculture.

GEF Engagement in the Mediterranean Region Edward Elgar Publishing
 This Handbook explores the main themes and topics of the emerging field of Global Administrative Law with contributions by leading scholars and experts from universities and organizations around the world. The variety of the subjects addressed and the internationality of the Handbook's perspectives make for a truly global and multi-dimensional view of the field. The book first examines the growth of global administrations, their interactions within global networks, the emergence of a global administrative process, and the development of the rule of law and democratic principles at a global level. It goes on to illustrate the relationship between global law and other legal orders, with particular attention to regional systems and national orders. The final section, devoted to the emergence of a global legal culture, brings the book full circle by identifying the growth of a global epistemic community. The Research Handbook on Global Administrative Law provides a contemporary overview of the nascent field in detailed yet accessible terms, making it a valuable book for university courses. Academics and scholars with an interest in international law, administrative law, public law, and comparative law will find value in this book, as well as legal professionals involved with international and supranational organizations and national civil servants dealing with supranational organizations.

Joint Evaluation of the GEF Small Grants Programme Routledge
 The first edition of Professor Yoshida's monograph, *The International Legal Régime for the Protection of the Stratosphere Ozone Layer*, provided a renowned and comprehensive contemporary study of the international ozone régime. In the second revised edition, the author analyses important developments in the ozone treaty régime.

Research Handbook on Global Administrative Law Food & Agriculture Org.
 'Climate Resilient Cities: A Primer on Reducing Vulnerabilities to Disasters' provides city administrators with exactly what they need to know about the complex and compelling challenges of climate change. The book helps local governments create training, capacity building, and capital investment programs for building sustainable, resilient communities. A step-by-step self-assessment challenges policymakers to think about the resources needed to combat natural disasters through an innovative hot spot risk and vulnerability identification tool. This primer is unique from other resources in its treatment of climate change using a dual-track approach that integrates both mitigation (lowering contributions to greenhouse gases) and adaptation (preparing for impacts of climate change) with disaster risk management. The book is relevant both to cities that are just beginning to think about climate change as well as those that already have well established policies,

institutions, and strategies in place. By providing a range of city-level examples of sound practices around the world, the book demonstrates that there are many practical actions that cities can take to build resilience to climate change and natural disasters.

GEF Country Portfolio Evaluation Global Environment Facility
 This book provides an examination of the principles of equality and equity in international environmental law. It focuses on analyzing what has been done on the international plane to promote the participation of developing countries in international environmental agreements. *Contributing to Global Security* United Nations University Press
 Concerned with the need to reduce chemical risks, this text also covers related biological and physical risks. Risk reduction has an important economic role, not least in developing countries. Many of the contributors are from developing countries and indicate the problems and some of the solutions their countries will need to adopt during their process of reconstruction, development and recovery. The text discusses the decision-making process involving the political, socioeconomic, engineering, and natural sciences so as to develop, analyze and compare regulatory options. It considers how such measured decision making enables the selection of optimal responses to achieve safety from perceived hazards.

Max Planck Yearbook of United Nations Law Global Environment Facility
 Contents:

A Selection of Projects from the First Three Tranches GEF Evaluation Office
 This volume is an important contribution to both theoretical and practical approaches to solving contradictions and conflicts between the approaches, principles, objectives and regulations of international environmental agreements. The issue of the coordination and streamlining of environmental agreements is of growing importance regarding the increasing number of international regulations on the one hand and the urgency for effective instruments in the light of continuing environmental degradation on the other. This study will become an essential reference for scholars as well as practitioners working in the field of international environmental law. **Global Environment Facility Financing Adaptation Action** GEF Evaluation Office
 Global Environmental Institutions continues to provide the most accessible and succinct overview of the major global institutions attempting to protect the natural environment. Fully updated throughout to reflect the latest environmental issues, the second edition includes substantial new material on developments in international agreements and how institutional mechanisms have evolved in the past 10 years, including the creation of the new Sustainable Development Goals, the Minamata Convention on Mercury, and the Paris Agreement on Climate Change. This second edition maintains the clear structure of the first edition, examining:

- the underlying causes of global environmental problems
- the creation of global environmental institutions
- the effectiveness of action undertaken by these institutions.

 Providing an overview of the United Nations Environment Programme and the other entities within the UN that play important roles in global environmental governance, it also examines institutions clustered by issue area, introducing institutions that focus on protecting endangered species and biodiversity, govern the ocean environment (focusing on the atmosphere), and regulate the transboundary movement of hazardous substances. Concluding with an updated chapter on emerging issues and future directions drawing on the latest scholarship in the field, and written by an acknowledged expert in the field, Global Environmental Institutions is essential reading for students of environmental politics and international organizations. **The International Legal Régime for the Protection of the Stratospheric Ozone Layer** Global Environment Facility

The World Summit on Sustainable Development in Johannesburg in 2002 underscored the need to reform the current institutional framework for environmental governance. Chambers and Green, both affiliated with the United Nations University Institute of Advanced Studies in Japan, gather contributors to take up the question left unanswered at Johannesburg

The World Bank and Sustainable Development: Legal Essays collects works from the past ten years by David Freestone, former Deputy General Counsel and Senior Adviser at the World Bank. The essays offer a unique perspective founded on the author's years of experience at the World Bank and cover a wide-range of topics. Updated by current Bank Staff members, together these seven legal essays represent a seminal body of work from a uniquely qualified voice in international environmental law.

GEF Country Portfolio Evaluation UNEP/Earthprint

Indonesia has been remarkably successful in achieving its development objectives over the past 25 years. Although it is still a low-income country, its tradition of sound economic management has laid the foundations for continued progress in the decades ahead. As the Indonesian government formulates its second long-term development plan, issues of environmental quality and sustainability raise new concerns. This report examines environmental issues, assesses their implications for the achievement of development goals, and suggests an action plan that would help to ensure that those goals will be met. The analysis of current environmental conditions and trends and of the likely impact of future growth leads to three main conclusions: - Future growth will depend increasingly on Indonesia's stock of key natural resources and the sustainability of critical ecosystems. -The industrial sector will continue to expand in urban areas, where growing congestion and industrial pollution pose an immediate threat to health and human welfare. This will eventually lead to negative effects on the economy. -As a result of rapid growth, environment- related issues of equity among the population will become increasingly important.

Annual Report of the Global Environment Facility Global Environment Facility

This new and user-friendly edition provides key information for the international NGO community on general policy and advocacy issues related to the GEF. Given the complexity of the GEF, the guide gives a simple and concise overview of the GEF, areas for NGO involvement, and financial modalities. A co-publication of IUCN, Biodiversity Action Network (BIONET) and Climate Network, Europe.

[Russian](#) Global Environment Facility

This publication contains the text of the Instrument for the Establishment of the Restructured Global Environment Facility, as amended by the Second and Third GEF Assemblies, published in March 2008. It also includes: a) the decisions of the governing bodies of the three Implementing Agencies approving the Instrument and its amendments, b) the resolutions adopted by the IBRD Executive Directors approving the second, third, and fourth replenishments of the GEF Trust Fund in 1998, 2002, and 2006, respectively, and c) a section on updated commitments to the GEF Trust Fund by contributing participants.

Manual on Compliance with and Enforcement of Multilateral Environmental Agreements World Conservation Union

This Manual expands upon Guidelines on Compliance with and Enforcement of Multilateral Environmental Agreements (MEAs). Many States participated in the development and negotiation of the Guidelines, which were adopted by the UNEP Governing Council in 2002. While this Manual is not a negotiated document, it also is the result of a collaborative process involving a wide range of numerous individuals around the world. These people assisted in drafting case studies and other contributions, reviewing the text, and suggesting substantive and formatting changes.

Global Environmental Institutions Martinus Nijhoff Publishers

This document presents the Global Environment Facility's (GEF) policy on public investment in GEF financed projects. At its meeting in April 1996, the GEF Council approved the principles presented herein as a basis for public involvement in the design, implementation and evaluation of GEF-financed projects. The Council stressed that when applying the principles, there should be emphasis on local participation and local stakeholders, specific conditions in-country should be taken into consideration, and public involvements should be consistent with the provision of the instrument for the establishment of the restructured GEF. This document builds upon previous papers and incorporates comments from consultations; part 1, provides the rationale and definition of public involvement. The basic principles of public involvement are presented in part 2, together with an identification of how the principles will be applied by the Secretariat, implementing agencies, project executing agencies, and other participating in GEF-financed projects.
