After 70 years after independence, the tragic reality of Indian schools is that who we are, where we live, how much we earn and our gender influences the kind of education we will get. In this collection of essays the author explores the contours of a school system that is facing a crisis of legitimacy. While India aspires to march towards a knowledge driven society and economy, millions of young people are left behind. Those who can afford march out of government schools only to realize that the private schools are no better. The schools they attend leaves them with little knowledge or skill, a very low self-esteem and a bleak future. This book argues that the struggle for equality in education, is ultimately a struggle for quality - both being two sides of the same coin. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

Involving Parents of Students With Special Needs Routledge

Educational Measurement has been the bible in its field since the first edition was published by ACE in 1951. The importance of this fourth edition of Educational Measurement is to extensively update and extend the topics treated in the previous three editions. As such, the fourth edition documents progress in the field and provides critical guidance to the efforts of new generations of researchers and practitioners. Edited by Robert Brennan and jointly sponsored by the American Council on Education (ACE) and the National Council on Measurement in Education, the fourth edition provides in-depth treatments of critical measurement topics, and the chapter authors are acknowledged experts in their respective fields. Educational measurement researchers and practitioners will find this text essential, and those interested in statistics, psychology, business, and economics should also find this work to be of very strong interest. Topics covered are divided into three subject areas: theory and general principles; construction, administration, and scoring; and applications. The first part of the book covers the topics of validation, reliability, item response theory, scaling and norming, linking and equating, test fairness, and cognitive psychology. Part two

includes chapters on test development, test administration, performance assessment, setting performance standards, and technology in testing. The final section includes chapters on second language testing, testing for accountability in K-12 schools, standardized assessment of individual achievement in K-12 schools, higher education admissions testing, monitoring educational progress, licensure and certification testing, and legal and ethical issues.

In the midst of the heated battles swirling around American humanities education, Peter Stearns offers a reconsideration not of what we teach but of why and how we teach it. A humanities program, says Stearns, should teach students not just memorized facts but analytical skills that are vital for a critically informed citizenry. He urges the use of innovative research as the basis of such a curriculum, and he offers specific suggestions on translating curriculum goals into courses that can be taught alongside or instead of the more conventional staples.

The Brown Center on Education Policy conducts research on topics in American education, with a special focus on efforts to improve academic achievement in elementary and secondary schools. The center seeks to inform policymakers at all levels of government, to influence the course of future educational research, and to produce a body of work valuable not only to policymakers and scholars, but also to parents, teachers, administrators, taxpayers, school board members, and the general public. This annual report analyzes the state of American education using the latest measures of student learning, uncovers and explains important trends in achievement test scores, and identifies promising and disappointing educational reforms. Unlike similar reports intended solely for government use, the Brown Center Annual Report is written for an audience of parents, teachers, and policymakers.

Inside Indian Schools Elsevier

In this wonderfully evocative picture of an urban American high school and its successes and setbacks over the past thirty-five years, Gerald Grant works out a unique perspective on what makes a good school—one that asserts moral and intellectual authority without becoming rigidly doctrinaire or losing the precious gains in equality of opportunity that have been won at great cost. Grant describes what happened inside Hamilton High (a real school, although its identity is disguised), and how different worlds evolved as the school's authority system was transformed. After the opening of Hamilton High in the buoyant and self-confident 1950s, the school plunged into a period of violence and radical deconstruction in the late sixties. Grant charts the rise of student power in the seventies, followed by new transformations of the school in the last decade occasioned in part by the mainstreaming of disabled students and the arrival of Asian immigrants. Things got very bad before they got better, but they did get better. The school went from white power to black power to genuine racial equality. Its average test scores declined and then improved. Although test-score means did not return to their former levels, the gap in achievement between the social classes decreased. Violence was replaced by a sense of relative safety and security. Yet this book is not just a case study. In the second half the author presents a general analysis of American education. He contrasts the world of Hamilton High with other possible worlds, including those at three schools (one public and two private) that exhibit a strong positive ethos. He looks at the way the moral and intellectual worlds have been sundered in many contemporary public schools and asks whether they can be put back together again. The book is grounded in a creative methodology that includes research by students at Hamilton High, whom Grant trained to analyze life in their school. Later he shared this research with teachers as a means of opening a dialogue about what changes they wanted to make. Grant's analysis leads to recommendations for two essential reforms, and in an epilogue the teachers who read this hook also tell us what they make of it and offer their own conclusions. Their challenging final words will spur the thinking of educators, policymakers, scholars, parents, and all those who are concerned about our schools today.

A collection of short, stand-alone chapters divided into five sections including overview of the field; private and social returns to human capital investments; production, costs and financing of education; teachers and teacher labor markets; and education markets, choice and incentives. The collection provides international perspectives that describe the origins of these subjects, their major issues and proponents, their landmark studies, and opportunities for future research. The 70 contributors are each well-regarded economists whose research has advanced the topic on which they write, and this book fulfills an undersupplied niche for a text in the economics of education. The chapters come from the acclaimed International Encyclopedia of Education, 3e (2010), edited by Eva Baker, Barry McGaw, and Penelope Peterson. The Encyclopedia contains over 1,350 articles in 24 sections that stretch from educational philosophies and technologies to measurement, leadership, and national systems of education. - This single volume textbook presents a cohesive view of this increasingly important area of economics - Superb contributions from well-regarded

economist convey unique and useful perspectives - Chapters contain an extensive bibliography and further readings to enable interested researchers to extend their knowledge into each specific topic

Implementation science is the science of the effectiveness of research for real-world practitioners. This book is an indispensable, highly innovative and evidence-based resource aimed at utilizing research in psychology to improve all aspects of education, from individual teaching programs to organizational development. It addresses the widespread confusion and disappointment about the lack of effectiveness of real-world psychology and provides twenty-seven chapters offering proven policies, strategies and approaches for designing, supporting and improving interventions in schools. Collectively, the chapters go beyond the realm of psychology and education, tackling concerns about how to promote positive change in any context, covering topics from epistemology through statistics to examples of implementation approaches, frameworks and protocols. This book creates an immensely relevant body of information and evidence for any practitioner or organization facing the challenges of change. Essential reading for practitioners, policy makers, stakeholders and funders in psychology, education and beyond.

Virtual schools are a result of widespread changes in knowledge about learning, in available technology and in society. Virtual schooling is growing in popularity and will continue to attract students because of the benefits it offers over traditional schooling. Stakeholders in virtual schools need information to guide their decisions. For the foreseeable future, virtual schools will continue to meet diverse student needs, and to evolve in response to further change. Development and Management of Virtual Schools: Issues and Trends brings together knowledge of virtual schools as a reference for scholars and other groups involved in virtual schools. The chapters review best practice from concept and development, through implementation and evaluation.

National Assessment of Title I: Implementation of Title I Pearson Education

Assessing the Nation's Report Card examines the history of the National Assessment of Educational Progress (NAEP) and outlines plans for improving and modernizing the organization. Educational policy analyst Chester E. Finn, Jr. imparts a rare inside analysis of the evolution of the NAEP program at key moments in its history, and provides a firsthand perspective of crucial decisions and core goals that have helped shape it. The result is a revealing survey of the US's

most influential source of data on K-12 achievement. Assessing the Nation's Report Card offers readers an in-depth understanding and appreciation of NAEP as well as an examination of its shortcomings, its controversies, and its current issues. The book explores why NAEP is considered the gold standard of educational assessments yet is much lesser known than other types of standardized testing. Finn underscores the promise of applying the results in addressing achievement gaps, boosting federal accountability, and driving education reform and policy. He also discloses how the data are collected and what the results can and cannot tell us. For more than 50 years, this ambitious federal testing program has informed the decisions of policy makers and educational leaders as they advocate for educational improvements in the US. Acknowledging the nation's evolving need for actionable information about students and schools, Finn provides an assured and rare overview of the existing program and proposes possibilities for the future.

The Jewish Educational Leader's Handbook John Wiley & Sons

The education system in the United States is continually challenged to adapt and improve, in part because its mission has become far more ambitious than it once was. At the turn of the 20th century, less than one-tenth of students enrolled were expected to graduate from high school. Today, most people expect schools to prepare all students to succeed in postsecondary education

and to prosper in a complex, fast-changing global economy. Goals have broadened to include not only rigorous benchmarks in core academic subjects, but also technological literacy and the subtler capacities known as 21st-century skills. To identify the most important measures for education and other issues and provide quality data on them to the American people, Congress authorized the creation of a Key National Indicators System (KNIS). This system will be a single Web-based information source designed to help policy makers and the public better assess the position and progress of the nation across a wide range of areas. Identifying the right set of indicators for each area is not a small challenge. To serve their purpose of providing objective information that can encourage improvement and innovation, the indicators need to be valid and reliable but they also need to capture the report committee's aspirations for education. This report describes a workshop, planned under the aegis of the Board on Testing and Assessment and the Committee on National Statistics of the National Research Council. Key National Education Indicators is a summary of the meeting of a group with extensive experience in research, public policy, and practice. The goal of the workshop was not to make a final selection of indicators, but to take an important first step by clearly identifying the parameters of the challenge.
