A delightful book with high contrast black and white pictures of a cat, mouse, chicken, hen, duck and other animals specially designed to appeal to babies. A pleasure to share and talk about with a baby, or for older babies to look at for

themselves.

Animals Through Chinese History Little Tiger Kids
Tails from the Great War throws a spot light on the experience of creatures great and small during the First World War, vividly telling their stories through the incredible archival images of the Mary Evans Picture Library. The enduring public interest in Michael Morpurgos tale of the war horse reveals an enthusiasm for the animal perspective on war, but what of the untold stories of the war dog, the trench

rat or even the ships pig? Through unrivaled access to rarely seen illustrated wartime magazines, books and postcards, discover the sea lions who were trained to detect submarines, and witness the carcass of the 61ft mine-destroying wonder whale. Meet the dog that brought a sailor back from the brink of death, and inspired a Hollywood legend. See how depictions of animals were powerfully manipulated by the propaganda machine on both sides, and how the

presence of animals could bring much needed and even lifesaving companionship and cheer amid the carnage of war. As the centenary of the Great War is commemorated all over the world, take a timely journey via the lens of Mary Evans wartime images, and marvel at the often overlooked but significant contribution and experience of animals at war. By turns astonishing, heart-warming and occasionally downright bizarre, *Tails from the Great War*

champions the little-known story of the bison, the chameleon, the canary et al in wartime. *Baby's Very First Black and White Animals Little First Colouring* Many Early Modern Europeans who during the sixteenth and seventeenth centuries travelled to the New World left written or pictorial records of their encounters with a surprising fauna. The story told in this book is woven out of the threads of those texts and pictures. *A New World of*

Animals shows how the initial wonder at the new beasts gave way to a more utilitarian approach, assessing their economic and medical potential. It elucidates how shifts in European perceptions brought the animals from the realm of the fantastic into the mainstream of early modern natural history, while at the same time changing the way in which Europeans saw their own world. Indeed, the chronicles and treatises of those who in the wake of the discovery arrived in the new lands

tell as much about the particular interests and mental worlds of the writers as about the 'new animals'. This book traces the amazement of the first explorers and colonizers, the chronicles of soldiers and Indians, the 'natural histories of the New World', the place of animals in the network of economic interests driving the early expansion of Europe, the views of the missionaries and those of natural philosophers and physicians. Taking the reader from the Brazilian

forests to the erudite cabinets of the Old World, from Patagonia to the centres of empire, the story of the discovery of the unexpected menagerie of the New World is also an exploration of Early Modern European imagination and learning. **Animal Kingdom of the World** Speedy Publishing LLC
DK First Animal Encyclopedia is loaded with spectacular photographs showing animal habits and habitats. From aardvark

to zebra, this ebook includes fascinating facts about animals, giving children a wonderful head start on learning about the animal world. This ebook is an ideal first reference guide to the animals of the world. *The Third Jewel of Earth* Walter de Gruyter GmbH & Co KG
This book presents the case for legal protection for animals based on humanity's shared interests and destinies with the animal kingdom. To underscore the urgent need for legal reform, the

book documents how animals are in crisis, with separate discussions on animals in entertainment, research, fashion, the food industry, and animals in our homes, as well as issues that impact wildlife and aquatic animals. In each of the foregoing areas, there is a discussion of major developments for animals across the globe, the objective being to demonstrate how the U.S. is out of step with other major countries in its legal treatment of animals. The importance of media as a

driver of change is also considered. This background culminates to the heart of the book, which discusses and analyzes the link between human rights and animal rights, with nine areas explored (e.g., loss of biodiversity; environmental destruction; zoonotic diseases; world hunger; violence). Challenges to legal reforms are also explored, including issues associated with weak laws, the failure to enforce existing laws, and governmental agencies

that tend to overlook the actions of industries. Finally, the book explores the development of animal law and the trajectory of current laws, with analysis of developing 'rights of nature' laws and 'legal personhood' status for animals.

Shared Lives of Humans and Animals Crown
The Kitāb Na't al-Ḥayawān is the earliest of a group of illustrated manuscripts dealing with the characteristics of animals and their medicinal uses. The present study

considers both the confluence of textual traditions within this work and the stylistic and iconographic relationships of its illustrations, which make it a key witness to early thirteenth-century Arab painting. After a re-evaluation of previous approaches, emphasis is placed on relating image to text, on stylistic affiliations, and on the modalities of production, supported by technical analyses undertaken for the first time. In elucidating the particular context of this unique

manuscript, the study contributes to our understanding of a critical period in the development of Middle Eastern painting and art.

This volume provides a concise synthesis of human-animal relations over time, charting shifting attitudes towards animals from domestication to the present day. It asks how non-human species have shaped human history, and how humans have reconfigured the animal

world. Humans have had a long and close relationship with animals. They have hunted them, consumed them as food and fashion, exploited them as energy sources, utilised them in warfare, exhibited them in zoos and menageries, and studied them for science. In the process, they have radically changed the way in which many animals live, subjecting them to captivity, altering their diets, constraining their movements and, through selective breeding, reshaping their bodies.

The book explores the use of animals for sustenance, labour, companionship and display, and traces the rise of the animal rights movement. It also assesses how humans have impacted the overall biodiversity of the planet, driving some species of animals to extinction and permitting others to colonise new continents. With case studies on animal astronauts, celebrity kakapos, globetrotting pandas and cocaine hippos, *Animals in World History* offers a lively and accessible

introduction to human-animal relations for students and instructors of animal studies, environmental history, and social and cultural history.

Sentient animals, machines, and robots abound in German literature and culture, but there has been

surprisingly limited scholarship on non-human life forms in German studies. This volume extends interdisciplinary research in emotion studies to examine non-humans and the affective relationships between humans and non-humans in modern German cultural history. In recent years, fascination with emotions, developments in robotics, and the burgeoning of animal studies in and beyond the academy have given rise to questions about the nature of humanity. Using

sources from the life sciences, literature, visual art, poetry, philosophy, and photography, this collection interrogates not animal or machine emotions per se, but rather uses animals and machines as lenses through which to investigate human emotions and the affective entanglements between humans and non-humans. The COVID-19 pandemic made us more keenly aware of the importance of both animals and new technologies in our daily

lives, and this volume ultimately sheds light on the centrality of non-humans in the human emotional world and the possibilities that relationships with non-humans offer for enriching that world.

War Horse A&C Black Fully illustrated in color, a fascinating exploration of the one hundred animals that have had the most profound influence on humanity throughout the ages. We are not alone. We are not alone on the planet. We are not alone in the countryside. We are

not alone in cities. We are not alone in our homes. We are humans and we love the idea of our uniqueness. But the fact is that we humans are as much members of the animal kingdom as the cats and dogs we surround ourselves with, the cows and the fish we eat, and the bees who pollinate so many of our food-plants. In *The History of the World in 100 Animals*, award-winning author Simon Barnes selects the one hundred animals who have had the greatest impact on

humanity and on whom humanity has had the greatest effect. He shows how we have domesticated animals for food and for transport, and how animals powered agriculture, making civilisation possible. A species of flea came close to destroying human civilisation in Europe, while the slaughter of a species of bovines was used to create one civilisation and destroy another. He explains how pigeons made possible the biggest single breakthrough in the

history of human thought. In short, he charts the close relationship between humans and animals, finding examples from around the planet that bring the story of life on earth vividly to life, with great insight and understanding. The heresy of human uniqueness has led us across the millennia along the path of destruction. This book, beautifully illustrated throughout, helps us to understand our place in the world better, so that we might do a better job of looking

after it. That might save the polar bears, the modern emblem of impending loss and destruction. It might even save ourselves.

Animal genetic resource diversity underpins the supply livestock products and services across a wide range of production environments. It promotes resilience and serves as a basis for adapting livestock management to changing conditions. It is vital to livelihoods of

many of the world's poor people. It can contribute to the delivery of ecosystem services such as landscape management and the maintenance of wildlife habitats. However, it is often undervalued, underused and under threat. This report updates the global assessment provided in the first report on The State of the World's Animal Genetic Resources for Food and Agriculture, published in 2007. It focuses particularly on changes that have

occurred during the period since the first report was published. It serves as a basis for a review, and potential update, of the Global Plan of Action for Animal Genetic Resources, which since 2007 has provided an agreed international framework for the management of livestock biodiversity. Drawing on 129 country reports, it presents an analysis of the state of livestock diversity, the influence of livestock-sector trends on the management of animal genetic resources,

the state of capacity to manage animal genetic resources, including legal and policy frameworks, and the state of the art in tools and methods for characterization, valuation, use, development and conservation.

This book is a glorious celebration of life in the wild in all its variety and splendour, and belongs on every child's bookshelf.

My First Animals Jigsaws and Book Simon and Schuster

A journey through 20,000 years of history and myth in search of the answer to a single question: Do animals have souls? Anyone who has ever mourned the loss of a cherished pet has wondered about the animal soul. Do animals survive the death of the body, or are they doomed to disappear completely when they leave this world behind? Both scientists and religious authorities have long

scoffed at the idea of animals in heaven. Yet the question endures. In this wise, immensely readable book, Ptolemy Tompkins embarks on a quest for the answer—taking us on a top-speed tour of the history of the animal soul. Equally at home with mainstream and alternative spiritual philosophies, Tompkins takes us from the savannas of Africa to the earth's first cities to the early days of the great faith traditions of both East and West. Along the

way, he shows that, despite what many of us have been taught, the world's various spiritual traditions all have profoundly meaningful things to say about the animal soul, if we simply know where to look. Rescuing these ancient insights and blending them with vivid stories about animals today—from a dwarf rabbit named Angus to a manatee named Moose to a black bear named Little Bit—The Divine Life of Animals paints a gloriously inclusive

picture of the cosmos as a place made up of both matter and spirit, in which animals are every bit as important, spiritually speaking, as the humans with whom they share the world. Though it is startlingly original, The Divine Life of Animals also feels strangely and instantly familiar, for it reveals truths that many of us have held in our hearts already, waiting only for someone to give fresh voice to one of the oldest and most trustworthy intuitions we possess. The Divine Life of

Animals offers a
