Chameleons (who belong to the Chamaeleonidae family) are a highly unique clade of reptile which originate from Africa, Europe and Asia. In the present day, chameleons can be often found in warm habitats that range from rain forests to deserts and can be found throughout Africa, Madagascar, southern Europe (near the equator), southern Asia and they have even been introduced to Hawaii, California and Florida. There are over 200 recognized species of chameleon which means they come in a wide variety of sizes and colour morphs. Chameleons are adapted for visual hunting and climbing. They have multiple specialized features which help them hunt and avoid predators which include their ability to camouflage themselves by changing their color, their zygodactylous feet, their prehensile tail and their independently mobile eyes. All of the aforementioned specialized features will be discussed in a separate section of this care manual. Before purchasing any pet it is important to understand that as a pet owner you are responsible for the care and wellbeing of your pet. It is important to try and learn as much as you can about the animal you are considering to keep as a pet to make sure that your lifestyle, household and financial status are suited to provide your pet with the best possible care. This guide has been designed to provide you with both precise and concise information about a chameleon's basic needs to help you provide your pet

with the best quality care practices.

Chameleons Change Color! TFH Publications

A young child living on the island of Madagascar spots a pair of panther chameleons in a tree near her home. She keeps watch on the chameleons and decides to record what she sees in a diary. Readers will follow along as the narrator observes the male's mating dance, the female digging a burrow for her eggs, and the emergence of the baby chameleons from the burrow. As the independent young chameleons hunt, feed, and grow into adults, every moment is detailed in the diary. Colorful photos, diagrams, and clear, age-appropriate text will engage young readers as they explore the life cycle, natural habitat, physical characteristics, diet, and behavior of these colorful reptiles. The diary format models scientific observation and critical thinking—and encourages children to keep notebooks recording their own investigations into the natural world.
