Are you looking to pass the coveted Cisco CCNA Routing and Switching exam? There are so many study guides to choose from, but most of them only serve to confuse students with unnecessary technical jargon and useless information rather than teach them what they need to know to pass the exam and actually apply what they have learned to the real world of IT. This book will prepare

you for the latest Cisco CCNA Routing exams, including: - 200-125 CCNA - Interconnecting Cisco Networking Devices: Accelerated (CCNAX) - 100-105 ICND1 - Interconnecting Cisco Networking Devices: Part 1 (ICND1) - 200-105 ICND2 - Interconnecting Cisco Networking Devices: Part 2 (ICND2) Over 50% of the CCNA exam marks are awarded for completing the notoriously difficult practical lab scenarios, so why are there next to no labs to be found in most CCNA study guides? We've packed over 45 follow-along mini-labs and 32 full labs into this study guide, as well as solutions and configurations you can try at home so that you really learn how to configure and troubleshoot all the important exam topics, including: - Routing protocols such as EIGRP, OSPF and BGP - IPv6 internetworking - Securing the router and switch with passwords - VLANs and VLAN security - Access lists and Network Address Translation - Backing up important configuration files - Planning and designing a network addressing scheme - Spanning Tree Protocol - Answering any subnetting question within seconds - guaranteed! - Quickly troubleshooting and fixing network faults in the exam and in the real world - Setting up a router and switch from scratch with no previous experience - And much more The book has been broken down into ICND1 topics in the

first half and ICND2 topics in the second half so that you can take either the one-exam or two-exam route. In their day jobs the authors work on live enterprise networks for global companies, so let them share their decades of internetworking experience with you. They have packed this study guide with exam tips and real-world advice that you can use on the job to avoid common mistakes made by both junior and experienced network engineers. These mistakes can cost you your job. As well as the labs and mini-labs, the theory has been broken up into easy to manage modules so that you can study at your own pace and really master the technologies. There is more than \$400 worth of practice exams, advanced challenge labs, and study videos at the URL below for you to enjoy free of charge and to guarantee your success come exam day. <https://www.howtonetwork.com/ccnasimplified>

pass the new style exams. FREE SUPPORT The book is supported for free so just come over and register your copy to get free access to over \$400 worth of videos, exams, cram guides - in60days.com/free/ccnain60days/ ABOUT THE BOOK Do any of the following problems sound familiar to you? "I just don't know where to start studying. I feel overwhelmed by the information." "I've bought all the CBT-style videos and books, and have even been on a course, but I don't feel ready to take the exam and I don't know if I ever will." "I've been studying for a long time now, but I haven't booked the exam yet because I just don't feel ready." For every ten students who start out towards the CCNA qualification, nine quit. They don't quit because of laziness but because they became overwhelmed with information and didn't even know where to start. They sat down to study from one of the 'big name' manuals and half an hour later found themselves staring blankly at the same page. Can you imagine how frustrating that feels? You see, most authors throw you in at the deep end and expect you to get on with it. They forget that you have a full-time job, a long journey back home, family commitments and any number of challenges going on in your life. The last thing you have time for is to write out a detailed study plan with plenty of review sessions. If only somebody could tell you what to study each day, every day. If only you could open your study guide and see which bit of theory to read, which lab to do and which exam to take. You could then get on with the task of studying and getting that exam nailed. This is where Cisco CCNA in 60 Days comes in. Written in response to feedback from thousands of students using my online CCNA in 60 days program, my classroom courses and my other online Cisco training websites this book is the final piece in the studying puzzle. HOW IT WORKS Every day you read your theory module, you review yesterday's lesson, do a lab and then answer some review questions. The next day you do the same until you reach the review sessions where you cement all your knowledge with more labs and review as well as some practice exams. If that wasn't enough, you have a cram guide to read daily and an online Subnetting review site to really hone your subnetting skills. At the 30 day mark you can take your CCENT exam and move into your ICND2 study sessions or just take your CCNA exam at the end of 60 days. If you fall behind no problem, just pick up where you left off. WHAT'S COVERED? Every subject Cisco want you to know for your exams is covered with labs, theory, exams, reviews and crams. From RIP to OSPF, from VLSM to CIDR, IPv4 to IPv6, STP to CDP. Every exam topic is covered in detail many times over. Just when you think you are ready you are hit with challenge labs and more exams to ensure you are more than ready for the tricky Cisco exams. There are over 60 hand-on labs in total to help you build your configuration skills and confidence. ABOUT THE AUTHORS Paul Browning used to work at Cisco TAC but left in 2002 to start his own Cisco training company. He has authored several Cisco manuals as well as created one of the biggest online Cisco training websites used by many thousands of students. Farai Tafa is a dual CCIE who consults for large blue chip companies in the USA. Daniel Gheorghie is a CCIE in Routing and Switching.
