Tropical forests are an undervalued asset in meeting the greatest global challenges of our time—averting climate change and promoting development. Despite their importance, tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest-rich countries. The good news is that the science, economics, and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation. *Why Forests? Why Now?* synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation. It makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent, affordable, and achievable.

Turbulence in the Solar Wind Springer Science & Business Media

This collection of essays aims to contribute to scholarship already published in Translation Studies and Postcolonial Studies, endeavouring to question the traditional divide between these two academic strands and to bring them closer together in creative ways, across several geographical regions, linguistic contexts and historical circumstances. Moving away from a binary and dichotomous approach, the authors address these questions that link

linguistic heterogeneity, postcolonial resistance and border identities. How does translation as a process operate across different linguistic and cultural spaces? How do translated selves negotiate meaning simultaneously across multiple linguistic borders? For the sake of cohesion, the geopolitical zones of translational contact have been limited to two colonial/European languages, namely French and English. The regional languages involved cover postcolonial, cultural spaces where Mauritian, Haitian, Reunionese and Louisianian Creole, Gikuyu, Wolof, Swahili and Arabic are spoken.

[Rhythms of the Brain](#) Food & Agriculture Org.

How has the regulation of business shifted from national to global institutions? What are the mechanisms of globalization? Who are the key actors? What of democratic sovereignty? In which cases has globalization been successfully resisted? These questions are confronted across an amazing sweep of the critical areas of business regulation—from contract, intellectual property and corporations law, to trade, telecommunications, labor standards, drugs, food, transport and environment. This book examines the role played by global institutions such as the World Trade Organization, World Health Organization, the OECD, IMF, Moodys and the World Bank, as well as various NGOs and significant individuals. Incorporating both history and analysis, *Global Business Regulation* will become the standard reference for readers in business, law, politics, and international relations.

Singapore Airlines (SIA) is widely acknowledged as one of the world's leading airlines, if not the best airline, globally. This book provides insights into a simple but intriguing question: How has SIA managed to outperform other flag-carriers for decades in an industry where it is notoriously difficult to succeed consistently? This updated second edition of *Flying High in a Competitive Industry* begins with an analysis of the airline industry and its key trends, moving on to a broad outline of SIA's strategic drivers of success. Empirical research was conducted at SIA to gain a deeper understanding of its strategy, core competencies and internal organisation, innovation processes and human resource practices, in order to instill strategy lessons that can inform the strategies of any organisation competing in intensely competitive industries. This book ends with some strategic lessons that apply to any organisation that aims to achieve sustainable success in hypercompetitive markets.

Reading Backwards Springer

In this fascinating collection of essays, an international group of scholars explores the sonic consequences of transcultural contact in the early modern period. They examine how cultural configurations of sound impacted communication, comprehension, and the categorisation of people. Addressing questions of identity, difference, sound, and subjectivity in global early modernity, these authors share the conviction that the body itself is the most intimate of contact zones, and that the culturally contingent systems by which sounds made sense could be foreign to early modern listeners and to present day scholars. Drawing on a global range of archival evidence—from New France and New Spain, to the slave ships of the Middle Passage, to China, Europe, and the Mediterranean court environment—this collection challenges the privileged position of European acoustical practices within the discipline of global-historical musicology. The discussion of Black and non-European experiences demonstrates how the production of 'the canon' in the cosmopolitan centres of colonial empires was underpinned by processes of human exploitation and extraction of resources. As such, this text is a timely response to calls within the discipline to decolonise music history and to contextualise the canonical works of the European past. This volume is accessible to a wide and interdisciplinary audience, not only within musicology, but also to those interested in early modern global history, sound studies, race, and slavery.

Royal Dictionary English and French and French and English Compiled from the Dictionaries of Johnson, Todd ... by Professors Fleming and Tibbins McGraw-Hill Singapore - Professional

This important overview explores the connections between Singapore's past with historical developments worldwide until present day. The contributors analyse Singapore as a city-state seeking to provide an interdisciplinary perspective to the study of the global dimensions contributing to Singapore's growth. The book's global perspective demonstrates that many of the discussions of Singapore as a city-state have relevance and implications beyond Singapore to include Southeast Asia and the world. This vital volume should not be missed by economists, as well as those interested in imperial history.

Journal des chemins de fer, des mines et des travaux publics UNESCO Publishing

This book outlines with theoretical and literary historical rigor a highly innovative approach to the writing of Russian literary history and to the reading of canonical Russian texts. "Anticipatory plagiarism" is a concept developed by the French Oulipo group, but it has never to my knowledge been explored with reference to Russian studies. The editors and contributors to the proposed volume – a blend of senior and beginning scholars, Russians and non-Russians – offer a set of essays on Gogol, Dostoevsky, and Tolstoy which provocatively test the utility of AP as a critical tool, relating these canonical authors to more recent instances, some of them decidedly non-canonical. The senior scholars who are the editors and most of the contributors are truly distinguished. The volume is likely to receive serious attention and to be widely read. I recommend it with unqualified enthusiasm. William Mills Todd III, Harry Tuchman Levin Professor of Literature, Harvard University As the founder of the notion of "plagiarism by anticipation", which was stolen from me in the sixties by fellow colleagues, I am delighted to learn that my modest contribution to literary theory will be used to better understand the interplay of interferences in Russian literature. Indeed, one would have to be naive to think that the great Russian authors would have invented everything. In fact, they were able to draw their ideas from their predecessors, but also from their successors, testifying to the open-mindedness that characterizes the Slavic soul. This book restores the truth. Pierre Bayard, Professor of Literature, University of Paris 8 This edited volume employs the paradoxical notion of 'anticipatory plagiarism'—developed in the 1960s by the 'Oulipo' group of French writers and thinkers—as a mode for reading Russian literature. Reversing established critical approaches to the canon and literary influence, its contributors ask us to consider how reading against linear chronologies can elicit fascinating new patterns and perspectives. *Reading Backwards: An Advance Retrospective on Russian Literature* re-assesses three major nineteenth-century authors—Gogol, Dostoevsky and Tolstoy—either in terms of previous writers and artists who plagiarized them (such as Raphael, Homer, or Hall Caine), or of their own depredations against later writers (from J.M. Coetzee to Liudmila Petrushevskaia). Far from suggesting that past authors literally stole from their descendants, these engaging essays, contributed by both early-career and senior scholars of Russian and comparative literature, encourage us to identify the contingent and familiar within classic texts. By moving beyond rigid notions of cultural heritage and literary canons, they demonstrate that inspiration is cyclical, influence can flow in multiple directions, and no idea is ever truly original. This book will be of great value to literary scholars and students working in Russian Studies. The introductory discussion of the origins and context of 'plagiarism by anticipation', alongside varied applications of the concept, will also be of interest to those working in the wider fields of comparative literature, reception studies, and translation studies.

Translating the Postcolonial in Multilingual Contexts Seven Stories Press

The time of Carnival represents a "wild" time at the end of winter and pointing to the beginning of a new season. It is characterized by the irruption of border figures, animal masks, characters which recall the world of the dead and which bring within themselves the germ of a vital force, of the energy that produces the reawakening of nature and announces the growth and fertility of the new crops. This wild domain shows itself under the shapes of a contiguity between human and animal: the costumes, the masks, refer to a world in which the characteristics of the human and those of the animal are fused and intertwined. Among these figures, in particular, emerge those of the Wild Man, the human being who takes on animal-like attributes and aspects, and of the Bear, the animal that, more than all the others, gets as close as possible to the human and seems to reflect a deformed image of it. Such symbolic images come from far off times and places to tell a story that belongs to our common origins. The bear assumes attributes

and functions alike in very different cultural contexts, such as the Sámi of Finland or North-American hunter-gatherers, and represents a boundary between the world of nature and the human world, between the domain of animals and the difficult construction of humanity: a process continued for centuries, perhaps millennia, and which cannot still be said complete.

Global Business Regulation Int. Rice Res. Inst.

This book conceptualises and illustrates temporary appropriation as an urban phenomenon, exploring its contributions to citizenship, urban social sustainability and urban health. It explains how some forms of appropriation can be subversive, existing in a grey area between legal and illegal activities in the city. The book explores the complex and the multi-scalar nature of temporary appropriation, and touches on its relationship to issues such as: sustainability and building re-use; culture; inclusivity, including socio-spatial inclusion; streetscape design; homelessness; and regulations controlling the use of public spaces. The book focuses on temporary appropriation as a necessity of adapting human needs in a city, highlighting the flexibility that is needed within urban planning and the further research that should be undertaken in this area. The book utilises case studies of Auckland, Algiers and Mexico City, and other cities with diverse cultural and historical backgrounds, to explore how planning, design and development can occur whilst maintaining community diversity and resilience. Since urban populations are certain to grow further, this is a key topic for understanding urban dynamics, and this book will be of interest to academics and practitioners alike.

Comparative judicial decisions on the conflict of laws. - World Bank Publications

Studies of mechanisms in the brain that allow complicated things to happen in a coordinated fashion have produced some of the most spectacular discoveries in neuroscience. This book provides eloquent support for the idea that spontaneous neuron activity, far from being mere noise, is actually the source of our cognitive abilities. It takes a fresh look at the coevolution of structure and function in the mammalian brain, illustrating how self-emerged oscillatory timing is the brain's fundamental organizer of neuronal information. The small-world-like connectivity of the cerebral cortex allows for global computation on multiple spatial and temporal scales. The perpetual interactions among the multiple network oscillators keep cortical systems in a highly sensitive "metastable" state and provide energy-efficient synchronizing mechanisms via weak links. In a sequence of "cycles," György Buzsáki guides the reader from the physics of oscillations through neuronal assembly organization to complex cognitive processing and memory storage. His clear, fluid writing-accessible to any reader with some scientific knowledge-is supplemented by extensive footnotes and references that make it just as gratifying and instructive a read for the specialist. The coherent view of a single author who has been at the forefront of research in this exciting field, this volume is essential reading for anyone interested in our rapidly evolving understanding of the brain.

The Rice Economy of Asia UNESCO

Greenhouse gas emissions by the livestock sector could be cut by as much as 30 percent through the wider use of existing best practices and technologies. FAO conducted a detailed analysis of GHG emissions at multiple stages of various livestock supply chains, including the production and transport of animal feed, on-farm energy use, emissions from animal digestion and manure decay, as well as the post-slaughter transport, refrigeration and packaging of animal products. This report represents the most comprehensive estimate made to-date of livestock's contribution to global warming as well as the sectors potential to help tackle the problem. This publication is aimed at professionals in food and agriculture as well as policy makers.

1990 Centre français des études éthiopiennes

This book tells the story and presents the objects found on the Tang Shipwreck, discovered off Belitung Island in Indonesia in 1998, and now housed at the Asian Civilisations Museum in Singapore. It is one of the most significant archaeological discoveries of recent times. Found at the site was a remarkable cargo of some 60,000 Chinese ceramics dating from the Tang dynasty (618-907), along with finely wrought gold and silver objects, bronze mirrors, and more ordinary objects belonging to the crew. Just as remarkable were the remnants of the ship itself, which consisted of wooden planks sewn together with rope. This construction technique clearly indicated that the vessel had been built in the Persian Gulf or western reaches of the Indian Ocean, and had sailed all the way from the Middle East to China, and was on its way home when it ran aground in the Java Sea. The Tang Shipwreck is a time capsule into ninth-century China, but also reflects many other cultures. The ceramics were made for consumers halfway around the world, which demonstrates the market demand and taste could play a role in mass production even in an age of agonizingly slow and perilous communication. The ten essays in this profusely illustrated volume discuss the ceramics and other commodities onboard, the ship's construction and possible origin, China's maritime trade in the Tang period, Chinese ceramic production, ports of call in Asia and Southeast Asia, and life on board the ship.

Tackling Climate Change Through Livestock Brookings Institution Press

New data show that countries that regulate the entry of new firms more heavily have greater corruption and larger unofficial economies, but not better quality goods. The evidence supports the view that regulating entry benefits politicians and bureaucrats.

Royal Dictionary English and French and French and English ... (Grand Dictionnaire Français-Anglais Et Anglais-Français) Walter de Gruyter GmbH & Co KG

The essays in this outlook collectively foster a broad approach to and definition of public investment, that is today more relevant than ever. Offering up a case for the elimination of bias against investment in European fiscal rules, this outlook is a welcome contribution to the European debate, aimed both at policy makers and general readers.

Gazzetta ufficiale del regno d'Italia Oxford University Press

The Financial Crisis Inquiry Report, published by the U.S. Government and the Financial Crisis Inquiry Commission in early 2011, is the official government report on the United States financial collapse and the review of major financial institutions that bankrupted and failed, or would have without help from the government. The commission and the report were implemented after Congress passed an act in 2009 to review and prevent fraudulent activity. The report details, among other things, the periods before, during, and after the crisis, what led up to it, and analyses of subprime mortgage lending, credit expansion and banking policies, the collapse of companies like Fannie Mae and Freddie Mac, and the federal bailouts of Lehman and AIG. It also discusses the aftermath of the fallout and our current state. This report should be of interest to anyone concerned about the

financial situation in the U.S. and around the world. THE FINANCIAL CRISIS INQUIRY COMMISSION is an independent, bi-partisan, government-appointed panel of 10 people that was created to "examine the causes, domestic and global, of the current financial and economic crisis in the United States." It was established as part of the Fraud Enforcement and Recovery Act of 2009. The commission consisted of private citizens with expertise in economics and finance, banking, housing, market regulation, and consumer protection. They examined and reported on "the collapse of major financial institutions that failed or would have failed if not for exceptional assistance from the government." News Dissector DANNY SCHECHTER is a journalist, blogger and filmmaker. He has been reporting on economic crises since the 1980's when he was with ABC News. His film *In Debt We Trust* warned of the economic meltdown in 2006. He has since written three books on the subject including *Plunder: Investigating Our Economic Calamity* (Cosimo Books, 2008), and *The Crime Of Our Time: Why Wall Street Is Not Too Big to Jail* (Disinfo Books, 2011), a companion to his latest film *Plunder The Crime Of Our Time*. He can be reached online at www.newsdissector.com.

Singapore in Global History Open Book Publishers

For a long time now it has been common understanding that Africa played only a marginal role in the First World War. Its reduced theatre of operations appeared irrelevant to the strategic balance of the major powers. This volume is a contribution to the growing body of historical literature that explores the global and social history of the First World War. It questions the supposedly marginal role of Africa during the Great War with a special focus on Northeast Africa. In fact, between 1911 and 1924 a series of influential political and social upheavals took place in the vast expanse between Tripoli and Addis Ababa. The First World War was to profoundly change the local balance of power. This volume consists of fifteen chapters divided into three sections. The essays examine the social, political and operational course of the war and assess its consequences in a region straddling Africa and the Middle East. The relationship between local events and global processes is explored, together with the regional protagonists and their agency. Contrary to the myth still prevailing, the First World War did have both immediate and long-term effects on the region. This book highlights some of the significant aspects associated with it.

Flying High in a Competitive Industry Cosimo, Inc.

The purpose of this book is to present a comprehensive picture of the role of rice in the food and agricultural sectors of Asian nations.

The Regulation of Entry Open Book Publishers

This book provides an overview of solar wind turbulence from both the theoretical and observational perspective. It argues that the interplanetary

medium offers the best opportunity to directly study turbulent fluctuations in collisionless plasmas. In fact, during expansion, the solar wind evolves towards a state characterized by large-amplitude fluctuations in all observed parameters, which resembles, at least at large scales, the well-known hydrodynamic turbulence. This text starts with historical references to past observations and experiments on turbulent flows. It then introduces the Navier-Stokes equations for a magnetized plasma whose low-frequency turbulence evolution is described within the framework of the MHD approximation. It also considers the scaling of plasma and magnetic field fluctuations and the study of nonlinear energy cascades within the same framework. It reports observations of turbulence in the ecliptic and at high latitude, treating Alfvénic and compressive fluctuations separately in order to explain the transport of mass, momentum and energy during the expansion. Further, existing models are compared with direct observations in the heliosphere. The problem of self-similar and anomalous fluctuations in the solar wind is then addressed using tools provided by dynamical system theory and discussed on the basis of available models and observations. The book highlights observations of Yaglom's law in solar wind turbulence, which is one of the most important findings in fully developed turbulence and directly related to the long-lasting and still unsolved problem of solar wind plasma heating. Lastly, it includes a short chapter dedicated to the kinetic range of fluctuations, which has recently been receiving more attention from the space plasma community, since this is inherently related to turbulent energy dissipation and consequent plasma heating. It particularly focuses on the nature and role of the fluctuations populating this frequency range, and discusses several model predictions and recent observational findings in this context.

The Tang Shipwreck Accademia University Press

This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations, international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become beneficial to the action of the international community.
