 The editors of this pivotal text, Edward Murguia, Melissa Tackett-Gibson, and Ann Lessem, elevate the debate about drug use and the Internet from a polemic discourse to a social scientific investigation. The essays confront issues related to the study of drug communication online, including the

causal factors of abuse as discussed in online forums, the relationship between music and drug use in virtual communities, and the ways in which individuals assess the accuracy of online drug information. This book highlights the variety of ways to examine drug use as a social problem and presents several theoretical perspectives valuable to online research. *Real Drugs in a Virtual World* is an enlightening and thought-provoking read that will appeal to sociology students and those interested in virtual communities. Turn any student into a bookworm with a few easy and practical strategies Donalyn Miller says she has yet to meet a child she can't turn into a reader. No matter how far behind Miller's students might be when they reach her 6th grade classroom, they end up reading an average of 40 to 50 books a year. Transfer RNA in Protein Synthesis is a comprehensive volume focusing on important aspects of codon usage, selection, and discrimination in the genetic code. The many different functions of tRNA and the specialized roles of the corresponding codewords in protein synthesis from initiation through termination are thoroughly discussed. Variations that occur in the initiation process, in reading the genetic code, and in the selection of codons are discussed in detail. The book also examines the role of modified nucleosides in tRNA interactions, tRNA discrimination in aminoacylation, codon discrimination in translation, and selective use of termination codons. Other topics covered include the adaptation of the tRNA population to codon usage in cells and cellular organelles, the occurrence of UGA as a codon for selenocysteine in the universal genetic code, new insights into translational context effects and in codon bias, and the molecular biology of tRNA in retroviruses. Beloved friend, The year is 2084, and that famous Margaret Thatcher quote has become a reality: There really is no such thing as society. No one speaks to anyone else. No one looks at anyone else. People don't collaborate, they only compete. I hate to admit it, but this has had tragic consequences. Unable to satisfy their social urges, the population has fallen into a pit of depression and anxiety. Suicide has become the norm. It all sounds rather morbid, does it not? But please don't despair, there is hope, and it comes in the form of our hero: Renee Ann Blanca. Wishing to fill the society-shaped hole in her life, our Renee does the unthinkable: She goes in search of human company It's a radical act and an enormous challenge. But that, I suppose, is why her tale's worth recounting. It's as gripping as it is touching, and I think you're going to love it... Your trusty narrator, PP

Frost & Sullivan's 2014 Growth, Innovation, and Leadership Book of the Year "EXPONENTIAL ORGANIZATIONS should be required reading for anyone interested in the ways exponential technologies are reinventing best practices in business." —Ray Kurzweil, Director of Engineering at Google In business, performance is key. In

performance, how you organize can be the key to growth. In the past five years, the business world has seen the birth of a new breed of company—the Exponential Organization—that has revolutionized how a company can accelerate its growth by using technology. An ExO can eliminate the incremental, linear way traditional companies get bigger, leveraging assets like community, big data, algorithms, and new technology into achieving performance benchmarks ten times better than its peers. Three luminaries of the business world—Salim Ismail, Yuri van Geest, and Mike Malone—have researched this phenomenon and documented ten characteristics of Exponential Organizations. Here, in EXPONENTIAL ORGANIZATIONS, they walk the reader through how any company, from a startup to a multi-national, can become an ExO, streamline its performance, and grow to the next level. "EXPONENTIAL ORGANIZATIONS is the most pivotal book in its class. Salim examines the future of organizations and offers readers his insights on the concept of Exponential Organizations, because he himself embodies the strategy, structure, culture, processes, and systems of this new breed of company." —John Hagel, The Center for the Edge Chosen by Benjamin Netanyahu, Prime Minister of Israel, to be one of Bloomberg's Best Books of 2015

Lynn Winters's and Joan Herman's The Turnaround Toolkit is written for school leaders who are focused on transforming instruction, and who may be working under significant time constraints to reverse declining student achievement or public perceptions of school failure. Based on the evidence that simply implementing "continuous improvement" is not enough to close the achievement gap, The Turnaround Toolkit provides a nine-step formative evaluation program designed to achieve an immediate and consistent focus on improving instruction in order to bolster student achievement. In a straightforward and accessible fashion, Herman and Winters explain three overarching "Turnaround Tasks" that frame these steps and the necessary-and sometimes drastic-actions that must be taken by school leaders as they use data to strategically choose, implement, monitor, and revise school interventions. A dedicated, online "toolkit" offers numerous worksheets and templates that support each stage of the process and help school leaders scaffold the work of educators to put an aggressive turnaround plan into action while a leadership guide at the end of the book provides guidance to turnaround teams and facilitators.

The Moore method is a type of instruction used in advanced mathematics courses that moves away from a teacher-oriented experience to a learner-centered one. This book gives an overview of the Moore Method as practiced by the four authors. The authors outline six principles they all have as goals : elevating students from recipients to creators of knowledge; letting students discover the power of their

minds; believing every student can and will do mathematics; allowing students to discover, present and debate mathematics; carefully matching problems

and materials to the students; and having the material cover a significant body of knowledge. Topics include establishing a

classroom culture, grading methods, materials development and more. Appendices include sample tests, notes and diaries of individual courses.
