Activities Report of the Quartermaster Food and Container Institute for the Armed Forces Lorimer

In 2011, the first edition of *Campus Confidential* sparked a lively debate about what is really going on inside our colleges and universities. The media and readers alike welcomed this readable, honest book. University authorities didn't. They took the authors to task for spilling the beans. In this second edition, Ken S. Coates and Bill Morrison pick up where they left off, adding new and up-to-date information for students and their parents to consider. Among the questions they address: Why more students should consider the skilled trades Whether a BA is ever worth the paper it's printed on How roving administrators are undermining universities Why we over-produce graduate students What's right (and wrong) with what's happening on campuses in Quebec Now that nearly everyone goes to college or university but only a small percentage of graduates actually find employment in their chosen field, understanding what's really going on in Canadian postsecondary institutions is more important than ever. Readers can count on Ken S. Coates and Bill Morrison for unexpected insights and lots of fresh new ideas and information.

Offers important new perspectives on the African diaspora in North America. Drawing on the work of social scientists from geographic, historical,

sociological, and political science perspectives, this volume offers new perspectives on the African diaspora in the United States and Canada. It has been approximately four centuries since the first Africans set foot in North America, and although it is impossible for any text to capture the complete Black experience on the continent, the persistent legacy of Black inequality and the winds of dramatic change are inseparable parts of the current African diaspora experience. In addition to comparing and contrasting the experiences and geographic patterns of the African diaspora in the United States and Canada, the book also explores important distinctions between the experiences of African Americans and those of more recent African and Afro-Caribbean immigrants.

Complex Arbitrations: Multi-party, Multi-contract and Multi-issue A Comparative Study Second Edition Bernard Hanotiau Arbitrations involving more than two parties and complex multi-contractual issues are becoming more and more prevalent every year in every major jurisdiction worldwide. This

fully updated, extensively revised edition of a far-seeing 2006 book that has been greatly valued and widely used remains the only comprehensive analysis of all the issues arising from multi-party-multi-contract arbitrations, including those involving States and groups of companies. The numerous factors and problems analysed in depth include the following: theories on the basis of which various courts and tribunals determine who are parties to the arbitration clause and whether a non-signatory may be part of the proceedings; to what extent one can bring to a single arbitration proceeding the various parties who have participated in a single economic transaction through several contracts; reasoning to follow when it comes to deciding whether another company of the group can be joined to the arbitration; whether a party to a complex contractual structure can intervene voluntarily in the proceedings; under what conditions arbitrations may be consolidated; to what extent *res judicata* applies when a second arbitration is initiated between the same parties on different legal grounds; how and to what extent one can overcome the inconveniences that arise from having several parallel proceedings; and enforcement of multi-party-multi-contract awards. Features of particular value to the practitioner include in-depth analysis of ad hoc and institutional awards rendered under the auspices of numerous arbitral institutions; analysis of relevant national case law based on hundreds of court decisions from all over the world; and appendices specifying multi-party-multi-contract arbitration clauses, provisions of international conventions and relevant national legislative and institutional rules. The first edition has been used all over the world, frequently referred to by courts and tribunals when one of its topics is addressed. The second edition, with its increased volume of arbitral awards and cases from many more jurisdictions, its new scenarios, its updates on new legislation and rules, and its newly researched jurisprudence will help lawyers and corporate counsel solve the increasingly complex procedural issues confronting them in dealing with multi-party-multi-contract disputes. Law professors and students of dispute resolution have here a powerfully authoritative consideration of one of the most salient aspects of current international practice.

Despite the enormous resources and thought that has been put into improving our educational systems, there has been little success in reducing the gap between Aboriginal and non-Aboriginal educational success. This book reviews the actual situation in terms of Métis, Inuit, and First Nations peoples in Canada using the most recent data available. It explores the issues historically, assesses the costs to both Aboriginal peoples and the country, reviews alternative approaches to solving the problems, and includes innovative analysis of the causes of these problems. The term 'attribution' refers to the means by which it is ascertained whether the State is involved in a dispute governed by international law. The notion of attribution is primarily used to determine if the State is responsible for the wrongful conduct of persons or entities with links to the State. In the context of international investment law, the exponentially growing arbitration jurisprudence arising from international investment agreements (IIAs), especially bilateral investment treaties (BITs), reflects the extent and risk of attribution determined in investment relationships that often involve State enterprises. This book, the first in-depth study of the uses of attribution in international investment law, provides a deeply informed analysis of the treatment of attribution in applicable legal instruments and investment arbitration jurisprudence worldwide. The analysis responds to such questions as the following: - When is a conduct attributable to the State for the purposes of its responsibility under international investment law? - What legal instruments govern the question of attribution under international investment law? - In what circumstances is the State the proper party to a contract entered into by a State-owned enterprise with an investor protected by an investment treaty? - How can State policymakers minimise their international law responsibility within the existing framework of attribution in international investment law? - How can investors maximise their protection within the existing framework of attribution in international investment law? Also covered are the procedural treatment of attribution by investment tribunals, explication of such broad-brush wordings as 'elements of governmental authority' and 'under the direction or control', and the impact of the rise of State-owned enterprises as investors. Ongoing and future trends in the jurisprudence are also taken into account. A one-stop reference on the question of attribution in international investment law, the analysis extracts identifiable commonalities among instruments and rulings, turning them into useful practice tools. This book will prove invaluable for practitioners advising States or investors in investment disputes. More generally, this book will be welcomed by arbitrators, in-house counsel for companies doing transnational business and international arbitration centres, as well as by academics in international arbitration.

The area of work and aging is complex and multi-faceted. Its foundation is formed by a wide array of disciplines that both contribute to the complexity of its understanding, and offer fertile promise for research, development, and application in the years ahead. With an ever-growing population of older

workers, many of whom are suggesting they will likely continue to work past traditional retirement age, it becomes all the more important that we increase our efforts to develop a more thorough understanding of older workers, the nature of their interactions with work and the organizations for which they work, and the process of transitioning to retirement. Clearly, there are huge societal and global challenges that will both inform and influence research and application at the individual and organizational levels. The Oxford Handbook of Work and Aging examines the aging workforce from an individual worker, organization, and societal perspective, and offers both an integration of current cross-disciplinary knowledge, and a roadmap for where research and application should be focused in the future to address issues of an aging workforce. The volume is divided into six core sections: demography, theoretical and methodological issues, the older worker, organizational strategies for an older workforce, individual and organizational perspectives on work and retirement, and societal perspectives with an aging workforce. Bringing together seasoned authors from diverse academic and professional backgrounds, new approaches to recruiting, workplace flexibility, and the right mix of benefits and incentives are presented as a way of engaging an older workforce.

High-stakes educational testing is a global phenomenon which is increasing in both scale and importance. Assessments are high-stakes when there are serious consequences for one or more stakeholders. Historically, tests have largely been used for selection or for providing a 'licence to practise', making them high-stakes for the test takers. Testing is now also used for the purposes of improving standards of teaching and learning and of holding schools accountable for their students' results. These tests then become high-stakes for teachers and schools, especially when they have to meet externally imposed targets. More recent has been the emergence of international comparative testing, which has become high-stakes for governments and policy makers as their education systems are judged in relation to the performances of other countries. In this book we draw on research which examines each of these uses of high-stakes testing. The articles evaluate the impact of such assessments and explore the issues of value and fairness which they raise. To underline the international appeal of high-stakes testing the studies are drawn from Australia, Africa, the Caribbean, Europe, former Soviet republics and North America. Collectively they illustrate the power of high-stakes assessment in shaping, for better or for worse, policy making and schooling. This book was originally published as a special issue of *Assessment in Education: Principles, Policy & Practice*.

Since the melting of the great ice sheets 12,000 years ago, there have been dramatic changes in climate, landforms, and plant, animal, and human communities in North America. Scientists perceive that midway between the ice age and the present day there was a warm, dry climatic episode in areas such as south-central Saskatchewan. The Gowen sites, formerly located where Saskatoon's municipal dump now lies, held an important part of the story. Through the study of these sites, as well as by comparisons with 113 other archaeological sites scattered throughout the Plains area, the author seeks to illuminate a poorly understood period in the prehistory of the Northern Plains. Improved understanding of past episodes of climatic warming may even prove useful to researchers considering the implications of climatic warming in our own time.

Medical Education: Theory and Practice E-Book Oxford University Press

Medical Education: Theory and Practice is a new text linking the theory and the practice for graduate students and educators who want to go beyond the basics. Next, it explores the theoretical foundations of medical education in depth. The remainder of the book reviews a whole range of educational contexts, processes and outcomes. This work has been edited by a distinguished, international team of medical educationalists and written by equally accomplished authors from across the globe representing a spectrum of disciplines. This will be an invaluable text for all Masters Students in health professions education as well as PhD students and education researchers wanting a background to the discipline. No one is content with the state of health and social programs in Canada today. The Right thinks that there is too much government involvement, and the Left thinks there is not enough. In *Changing Politics of Canadian Social Policy* James Rice and Michael Prince track the history of the welfare state from its establishment in the 1940s, through its development in the mid 1970s, to the period of deficit crisis and restraint that followed in the late 1970s and 1980s. Taking a historical perspective, the authors grapple with the politics of social policy in the 1990s. Globalization and the concomitant corporate mobility affect government's ability to regulate the distribution of wealth, while the increasing diversity of the population puts increasingly

complex demands on an already overstressed system. Yet in the face of these constraints, the system still endures and is far from irrelevant. Some social programs have been dismantled, but the government has organized and maintained others. Greater democratization of welfare programs and social policy agencies could make the system thrive again. *Changing Politics* provides the much-needed groundwork for students and policy makers while also proposing real solutions for the future.
