Trente ans de lutte contre l'onchocercose en Afrique de l'Ouest. Traitements larvicides et protection de l'environnement Australian Academic Press

Elijah's rag-tag mob of fighters, under the leadership of the mysterious Colonel Khan, are pinned down in Cuzco City by Propater forces, & a terrible battle ensues. As Elijah fights for his life, the truth about his newfound friends is finally revealed - but at least two of them won't be making it out of this deadly situation alive.

Le Génie Civil Springer Science & Business Media

This collection of articles (the Vercelli conference proceedings) places the theme of scepticism within its philosophical tradition. It explores the English philosophical thinkers, the French context, as well as major Italian figures and Spanish culture. It pays special attention to the relationships between history of philosophical ideas and the problems rising from the history of sciences (medicine, physics, linguistics, historical scholarship) in the 17th and the18th centuries.

"Hamburger's singular discovery of a group of devotional drawings made by an anonymous nun . . . is here presented with magisterial learning, theoretical sophistication, and deep human sympathy."—V. A. Kolve, University of California, Los Angeles

Journal officiel de la République française Titan Publishing Company

Kundalini's power lies dormant in humans until it is awakened. The awakened Kundalini expresses the primal divine impulse and ultimately joins the individual with the divine. The development of the book parallels the development of the Kundalini within. Part One exposes the awakening and unfolding of the Kundalini; Part Two describes the piercing of the energy centers and the stages of ascent through the body; and Part Three examines Kundalini's relation to sexual expression. The book provides a deep understanding of Tantra and of the underlying purpose of Tantracism. The author carefully considers the Caryakrama practices of sexual expression as a means of awakening and controlling Kundalini. Silburn draws together passages from the Trika, Krama, and Kaula systems ranging through Abhinavagupta and Lalla and provides both translation and commentary for them. Chapters on the Chakras, the Nadis, and on mantras further elucidate the topic and lead to a forceful conclusion: Kundalini is the source of ultimate human knowledge and power.

Annales. Débats Da Capo Press

La lutte contre l'onchocercose, ou cécité des rivières, une maladie parasitaire endémique, fut entreprise en Afrique de l'Ouest dans une perspective de développement durable. Tous les moyens technologiques disponibles ont de ce fait été mobilisés pour le contrôle du vecteur, une similie, puis du

parasite responsables de cette maladie, par le Programme de Lutte contre l'Onchocercose en Afrique de l'Ouest (OCP). La lutte antivectorielle consistant en épandages d'insecticides chimiques sur les sites de développement de la simulee dans les rivières, il est apparu indispensable d'assurer la sauvegarde de l'environnement aquatique qui fournit aux communautés riveraines eau et ressources biologiques. Les technologies les plus modernes ont été mises en œuvre dès leur mise au point, pour combattre la maladie, contribuant ainsi à la protection de ce milieu. Le programme de surveillance écologique des rivières traitées par des larvicides anti-simulies a été mis en place dès le lancement d'OCP. et assuré par des spécialistes de l'hydrobiologie des pays africains participants du Programme, sous la supervision d'un groupe international d'experts indépendants, le Groupe Écologique. OCP est incontestablement un succès aussi bien pour ce qui est du contrôle de la maladie que de la protection de l'environnement. Il est l'exemple unique au monde d'un programme de santé publique de longue durée qui depuis son origine a mis en œuvre tout ce qui était possible pour harmoniser les enjeux de l'amélioration de la santé et ceux de la protection de l'environnement. Il s'est achevé avec la satisfaction de laisser aux générations montantes un environnement non dégradé et des vallées libérées de l'onchocercose, qui permettront d'accroître la productivité agricole des pays africains.

Kundalini Simon and Schuster

Emotional pain is part of most people's reality. For some of us though, that pain can begin to impact on our ability to function in our everyday life. Despite years of valiant attempts to resolve or deny such pain, we may continue to suffer. Before her untimely death early in 2021, Dr Melissa Harte had experienced her own journey through emotional pain that led her eventually to become a counseling psychologist and an internationally accredited Emotion Focused Therapy (EFT) trainer. She spent years teaching hundreds of therapists how to use EFT as well as running her own thriving private practice The legacy of her considerable skill and knowledge remains in this book which sets out a framework and model that works gently, effectively and deeply to assist in reversing the psychological, emotional, spiritual and physical damage of unresolved emotional pain. Applicable to a range of practitioners including counsellors and psychologists, this book will help you to help your clients whose emotional pain may be attachment-related, be a single episode, a series of major trauma experiences, or the culmination of many so-called 'small t trauma' events. This is a 'how-to' book, presenting techniques and concepts to assist practitioners, including investigating the use of the impacts of trauma case studies — an area until very recently often overlooked or minimised when formalising case histories. Chapters also address: • The dilemma with the DSM-5 diagnostic criteria for posttraumatic stress disorder (PTSD). • The value of understanding the importance of emotions and how, as adaptive experiences, they provide essential information that can assist us in our daily lives. • The concept of emotional pain and how to work through it with an extended version of the focusing task, including the influences that helped to shape the task and its significant components. • The challenges around identifying dissociation and how to manage it. • The use of chair work as another element of working through emotional pain. At Melissa's request, all royalties from sales of her book will go to the Australian Institute for Emotion Focused Therapy.

Managing Cultural World Heritage Springer

On October 14-19, 1990, the 6th International Conference on the Conservation of Earthen Architecture was held in Las Cruces, New Mexico. Sponsored by the GCI, the Museum of New Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture problems, clay chemistry, and microstructures. In discussions that focused on the future, the application of modern technologies and materials to site conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing.

Thinkers on Education IRD Éditions

When culture makes itself at home in motion, where does an anthropologist stand? In a follow-up to *The Predicament of Culture*, one of the defining books for anthropology in the last decade, James Clifford takes the proper measure: a moving picture of a world that doesn't stand still, that reveals itself en route, in the airport lounge and the parking lot as much as in the marketplace and the museum. In this collage of essays, meditations, poems, and travel reports, Clifford takes travel and its difficult companion, translation, as openings into a complex modernity. He contemplates a world ever more connected yet not homogeneous, a global history proceeding from the fraught legacies of exploration, colonization, capitalist expansion, immigration, labor mobility, and tourism. Ranging from Highland New Guinea to northern California, from Vancouver to London, he probes current approaches to the interpretation and display of non-Western arts and cultures. Wherever people and things cross paths and where institutional forces work to discipline unruly encounters, Clifford's concern is with struggles to displace stereotypes, to recognize divergent histories, to sustain "postcolonial" and "tribal" identities in contexts of domination and globalization. Travel, diaspora, border crossing, self-location, the making of homes away from home: these are transcultural predicaments for the late twentieth century. The map that might account for them, the history of an entangled modernity, emerges here as an unfinished series of paths and negotiations, leading in many directions while returning again and again to the struggles and arts of cultural encounter, the impossible, inescapable tasks of translation.

This we can be sure of: when a restaurant in the western world is famous for its cooking, it is the tricolor flag that hangs above the stove, opined one French magazine, and this is by no means an isolated example of such crowing. Indeed, both linguistically and conceptually, the restaurant itself is a French creation. Why are the French recognized by themselves and others the world over as the most enlightened of eaters, as the great gourmets?

Why did the passion for food—gastronomy—originate in France? In *French Gastronomy*, geographer and food lover Jean-Robert Pitte uncovers a novel answer. The key, it turns out, is France herself. In her climate, diversity of soils, abundant resources, and varied topography lie the roots of France's food fame. Pitte masterfully reveals the ways in which cultural phenomena surrounding food and eating in France relate to space and place. He points out that France has some six hundred regions, or microclimates, that allow different agricultures, to flourish, and fully navigable river systems leading from peripheral farmlands directly to markets in the great gastronomic centers of Paris and Lyon. With an eye to this landscape, Pitte wonders: Would the great French burgundies enjoy such prestige if the coast they came from were not situated close to the ancient capital for the dukes and a major travel route for medieval Europe? Yet for all the shaping influence of earth and climate, Pitte demonstrates that haute cuisine, like so much that is great about France, can be traced back to the court of Louis XIV. It was the Sun King's regal gourmandise—he enacted a nightly theater of eating, dining alone but in full view of the court—that made food and fine dining a central affair of state. The Catholic Church figures prominently as well: gluttony was regarded as a "benign sin" in France, and eating well was associated with praising God, fraternal conviviality, and a respect for the body. These cultural ingredients, in combination with the bounties of the land, contributed to the full flowering of French foodways. This is a time of paradox for French gourmandism. Never has there been so much literature published on the subject of culinary creativity, never has there been so much talk about good food, and never has so little cooking been done at home. Each day new fast-food places open. Will French cuisine lose its charm and its soul? Will discourse become a substitute for reality? *French Gastronomy* is a delightful celebration of what makes France unique, and a call to everyone who loves French food to rediscover its full flavor.

The First World War State University of New York Press

In 1937 Ernest Hemingway traveled to Spain to cover the civil war there for the North American Newspaper Alliance. Three years later he completed the greatest novel to emerge from "the good fight," *For Whom the Bell Tolls*. The story of Robert Jordan, a young American in the International Brigades attached to an antifascist guerilla unit in the mountains of Spain, it tells of loyalty and courage, love and defeat, and the tragic death of an ideal. In his portrayal of Jordan's love for the beautiful Maria and his superb account of El Sordo's last stand, in his brilliant travesty of *La Pasionaria* and his unwillingness to believe in blind faith, Hemingway surpasses his achievement in *The Sun Also Rises* and *A Farewell to Arms* to create a work at once rare and beautiful, strong and brutal, compassionate, moving, and wise. "If the function of a writer is to reveal reality," Maxwell Perkins wrote to Hemingway after reading the manuscript, "no one ever so completely performed it." Greater in power, broader in scope, and more intensely emotional than any of the author's previous works, it stands as one of the best war novels of all time.

Cyberspace and the National Security of the United Kingdom Columbia University Press

Exchange is a pervasive concept in everyday life, affecting phenomena as diverse as interpersonal relationships and market transactions. In addition, economists have used the concept in a highly specific and clearly delineated way. Against this background, *Expanding the Economic Concept of Exchange* sets out to expand the concept of exchange by crossing the boundaries laid down by economists and by examining the function played by deceptions, self-deceptions and illusions. The main motivation for expanding the concept of exchange was the realization that in the prototypical economic model deception is not taken into account. Hence, economists traditionally regard deception as some sort of irrationality, as a flaw in an otherwise perfectly rational process. Authors represented in this volume take a different approach examining deception as a constituent quality of exchange. This is shown by the contributions drawing on recent developments in economic theory, by those with an anthropological orientation, as well as by a contribution referring specifically to Adam Smith. An interrogation into deception is long overdue in economics. This volume prepares the ground for and makes the first contributions to explicitly acknowledging deceptions, self-deceptions and illusions as fundamental dimensions allowing us as economists to further research and develop the concept of change. A particular and perhaps unexpected focus of this volume lies on anthropology, because economics can clearly benefit from integrating selected results on deception from outside its expanding domain. It is primarily targeted at economists interested in institutional aspects of exchanges and social theory. In addition, the topic will find interested readers from anthropology, cultural studies, science studies, philosophy.

L'Oeil Columbia University Press

Unmanned Aircraft Systems (UAS) have seen unprecedented levels of growth during the last decade in both military and civilian domains. It is anticipated that civilian applications will be dominant in the future, although there are still barriers to be overcome and technical challenges to be met. Integrating UAS into, for example, civilian space, navigation, autonomy, see-detect-and-avoid systems, smart designs, system integration, vision-based navigation and training, to name but a few areas, will be of prime importance in the near future. This special volume is the outcome of research presented at the International Symposium on Unmanned Aerial Vehicles, held in Orlando, Florida, USA, from June 23-25, 2008, and presents state-of-the-art findings on topics such as: UAS operations and integration into the national airspace system; UAS navigation and control; micro-, mini-, small UAVs; UAS simulation testbeds and frameworks; UAS research platforms and applications; UAS applications. This book aims at serving as a guide tool on UAS for engineers and practitioners, academics, government agencies and industry. Previously published in the *Journal of Intelligent and Robotic Systems*, 54 (1-3, 2009).

Godard On Godard Routledge

The Anthropocene has fundamentally changed the way we think about our relation to nonhuman life and to the planet. This book is the first to critically survey how the Anthropocene is enriching the study of literature and inspiring contemporary poetry and fiction. Engaging with topics such as genre, life, extinction, memory, infrastructure, energy, and the future, the book makes a compelling case for literature's unique contribution to contemporary environmental thought. It pays attention to literature's imaginative and narrative resources, and also to its appeal to the emotions and its relation to the material world. As the Anthropocene enjoins us to read the signals the planet is sending and to ponder the traces we leave on the Earth, it is also, this book argues, a literary problem. *Literature and the Anthropocene* maps key debates and introduces the often difficult vocabulary for capturing the entanglement of human and nonhuman lives in an insightful way. Alternating between accessible discussions of prominent theories

and concise readings of major works of Anthropocene literature, the book serves as an indispensable guide to this exciting new subfield for academics and students of literature and the environmental humanities.

Proceedings of the 1996 World Congress on Coastal and Marine Tourism Getty Publications

Written with verve and intensity (and a good bit of wordplay), this is the long-awaited study of Flaubert and the modern literary field that constitutes the definitive work on the sociology of art by one of the world's leading social theorists. Drawing upon the history of literature and art from the mid-nineteenth century to the present, Bourdieu develops an original theory of art conceived as an autonomous value. He argues powerfully against those who refuse to acknowledge the interconnection between art and the structures of social relations within which it is produced and received. As Bourdieu shows, art's new autonomy is one such structure, which complicates but does not eliminate the interconnection. The literary universe as we know it today took shape in the nineteenth century as a space set apart from the approved academies of the state. No one could any longer dictate what ought to be written or decree the canons of good taste. Recognition and consecration were produced in and through the struggle in which writers, critics, and publishers confronted one another.

6th International Conference on the Conservation of Earthen Architecture Routledge

Neo conservatism: Why We Need It is a defense of the most controversial political philosophy of our era. Douglas Murray takes a fresh look at the movement that replaced Great-Society liberalism, helped Ronald Reagan bring down the Wall, and provided the intellectual rationale for the Bush administration's War on Terror. While others are blaming it for foreign policy failures and, more extremely, attacking it as a "Jewish cabal," Murray argues that the West needs Neo conservatism more than ever. In addition to explaining what Neo conservatism is and where it came from, he argues that this American-born response to the failed policies of the 1960s is the best approach to foreign affairs not only for the United States but also for

Britain and the West as well.

The Return of Scepticism Palgrave Macmillan

This book is based on a study of 84 technological innovations that won Queen's Awards in 1966 and 1967. Nearly 40 of these are presented as well-documented but readable case histories. The topics range from new antibiotics to fast patrol boats, from an improved way of making bread to aircraft equipment, from new building materials and techniques to scientific instruments, from automatic gearboxes to guided missiles. Many points of interest are covered in the discussion. Is innovation more often 'pushed' by scientific or technological discoveries or more often 'pulled' by the needs of the market or of management? Is it true that outstanding individuals are necessary for success? Is it true that the time-lag between discovery and exploitations is shortening? Can one specify optimum sizes for research teams? What is the role of basic research? These are some of the issues raised in the course of a wide-ranging discussion of factors affecting technological innovation.

Nuns as Artists Springer Science & Business Media

This report provides a general overview of the problem of cybersecurity. The aim of the report is to inform debate and to make the case for a more coherent, comprehensive and anticipatory policy response, both nationally and internationally. In every area, society is becoming increasingly dependent upon information and communications technology (ICT). With dependency come exposure and vulnerability to misuse, criminality and even attack. Criminals and extremists are able to take advantage of the same "global technological commons" upon which society is becoming so dependent. Cybersecurity has become a fast-moving and complex security challenge, one which requires a coordinated, agile and mutually reinforcing response from all those who benefit from the global ICT infrastructure. This report forms the first part of a major project on cybersecurity undertaken by Chatham House in conjunction with Detica Ltd. The project aims to engage government, private-sector, academic and other specialists in high-level analysis of cybersecurity challenges and responses.--Publisher description
