Shell Shock in France, 1914-1918 Hogrefe Publishing GmbH

This beautifully illustrated volume explores the cultural history, especially in fashion, of the color pink from the 18th century to today.

Agrest and Gandelsonas Works Cambridge University Press

Beauty may be in the eye of the beholder, but it's also in the language we use and everywhere in the world around us. In this elegant, witty, and ultimately profound meditation on what is beautiful, Crispin Sartwell begins with six words from six different cultures - ancient Greek's 'to kalon', the Japanese idea of 'wabi-sabi', Hebrew's 'yapha', the Navajo concept 'hozho', Sanskrit 'sundara', and our own English-language 'beauty'. Each word becomes a door onto another way of thinking about, and looking at, what is beautiful in the world, and in our lives. In Sartwell's hands these six names of beauty - and there could be thousands more - are revealed as simple and profound ideas about our world and our selves.

Integer Programming and Related Areas Springer Nature

The Getty Museum's collection of drawings was begun in 1981 with the purchase of a Rembrandt nude and has since become an important repository of European works from the fifteenth through the nineteenth century. As in the first volume devoted to the collection (published in 1988 in English

and Italian editions), the text is here organized first by national school, then alphabetically by artist, with individual works arranged chronologically. For each drawing, the authors provide a discussion of the work's style, dating, iconography, and relationship to other works, as well as provenance and a complete bibliography.

The Poetics of Afanasy Fet Actes Sud

This book takes the reader on a grand tour of the empirical research concerning the personality trait of appreciation of beauty. It particularly focuses on engagement with natural beauty, engagement with artistic beauty, and engagement with moral beauty. The book addresses philosophers' thoughts about beauty, especially the special emphasis on the intimate relationship between love and beauty; appreciation of beauty from an evolutionary standpoint; and the emerging science of neuroaesthetics. The book concludes with a consideration of beauty and pedagogy/andragogy, as well as methodologies to increase appreciation of beauty.

Grand dictionnaire universel du XIXe siècle UN

"Documents some 40 of the architects' urban projects, interiors, and theoretical projects with plans, renderings, and color photos and sketches.

Includes interviews with the architects, biographies, and essays on architectural issues" -- Google Books.

AIDS in the World, Vol. 1, published in 1992, was the first full analysis of mankind's global confrontation with this disease. The AIDS scene, however, has been changing so rapidly that the need for a second volume was felt much earlier than expected. In AIDS in the World II, the authors extend the international comparisons from 38 countries to the entire world, and show that the AIDS pandemic has become increasingly fragmented within the world population. They present data that takes the discussion beyond the current understanding of the vulnerability of nations and communities to the worldwide spread of HIV, engaging in a detailed exploration of the social strategies that have enabled individuals to avoid infection. Mann and Tarantola chart a course into the future based on an incisive investigation of the global pandemic and response, the crucial lessons learned from the first decade, and their expert understanding of the scientific and social dimensions of the HIV challenge. The authors explain how the variety of reactions to the pandemic has contributed to a more advanced awareness of our vulnerability to HIV/AIDS, and offer a blueprint for an expanded global prevention effort. Intended to serve the information needs of all professionals involved in AIDS research and care, this volume's accessibility and clarity of writing make it highly suitable for the general reader as well.

'1001 Buildings You Must See Before You Die' is a visual testament to the world's greatest achievements in architecture. Comprehensive yet concise, each article includes essential information about the featured structure: who designed it, who commissioned it, key dates in its construction and more. The accompanying descriptions detail the historical and geographical considerations that influenced the design while stunning photographs illustrate the technical ingenuity and aesthetic brilliance of architects past and present...The book is organised chronologically beginning with the marvels of the ancient world and continuing with the masterpieces of each successive era to the present day. On display is a treasure trove of the world's finest architecture from Byzantine and Gothic wonders, through the incredible wealth of the Renaissance and Baroque, and on to the marvels of the twentieth century. The book culminates with the far-reaching achievements of the past decade, such as Jeanne Gang's undulating Aqua Tower in Chicago and Renzo Piano's towering Shard London Bridge...Featured here are the world's finest and most important public and residential buildings from palaces, museums and ground-breaking new residences to unique or unusual structures, such as the ancient Pueblo cliff dwellings and rustic southern Italian trulli.

Mémoire Sur Le Système Primitif Des Voyelles Dans Les Langues Indo-Européennes Princeton Architectural Press

Behind the pine grove the setting sun had left a zone of fire against which the trunks of the pine trees stood out like bronze columns. The path was rugged and uneven, giving evidence of the ravages wrought by the winter rains; at intervals loose stones, looking like teeth detached from the gum, rendered it still more impracticable. The melancholy shades of twilight were beginning to envelop the landscape; little by little the sunset glow faded away and the moon, round and silvery, mounted in the heavens, where the evening star was already shining. The dismal croaking of the frogs fell sharply on the ear; a fresh breeze stirred the dry plants and the dusty brambles that grew by the roadside; and the trunks of the pine trees grew momentarily blacker, standing out like inky bars against the pale green of the horizon. [pg 002] A man was descending the path slowly, bent, apparently, on enjoying the poetry and the peace of the scene and the hour. He carried a stout walking-stick, and as far as one could judge in the fading light, he was young and not ill-looking. He paused frequently, casting glances to the right and to the left as if in search of some familiar landmark. Finally he stood still and looked around him. At his back was a hill crowned with chestnut trees; on his left was the pine grove; on his right a small church with a mean belfry; before him the outlying houses of the town. He turned, walked back some ten steps, stopped, fronting the portico of the church, examined its walls, and, satisfied at last that he had found the right place, raised his hands to his mouth and forming with them a sort of speaking trumpet, cried, in a clear youthful voice: "Echo, let us talk together!"

San Camilo, 1936 Forgotten Books

Widely regarded as one of the best works by the winner of the 1989 Nobel Prize for Literature, San Camilo, 1936 appears here for the first time in English translation. One of Spain's most popular writers, Camilo José Cela is recognized for his experiments with language and with difficult subject matter. In San Camilo, 1936, first published in 1969, these concerns converge in a fascinating narrative that is as challenging as it is rewarding, as troubling as it is compelling. A story of history as it happens, by turns confusing and startlingly clear, echoing with news and rumors, defined by grand gestures and intimate pauses, the novel leads the reader into the ordinary life of extraordinary times. Beginning on the eve of the Spanish Civil War, San Camilo, 1936 follows a twenty-year-old student's attempts to sort out his private affairs (sex, money, career) in the midst of the turmoil

overtaking his country. In vivid and richly textured prose that distinguishes Cela's work, the emotional reality of civil war takes on a vibrant immediacy that is humorous, tender, and ultimately transforming as a young man tries to come to terms with the historical moment he inhabits--and hopes to survive. Readers new to Cela will find in this novel ample reason for the author's growing reputation among audiences worldwide.

Iconicity in Language Cambridge University Press

Learn how to select the right positive psychology (PP) assessment tool for the right situation Written by internationally renowned authors Looks at well-being, traits, states, and behavior Presents the relevant psychometric properties Considers assessment challenges Recommends selection in different settings Explores new directions in PP A comprehensive guide to selecting positive psychology assessment tools This volume gives a state-of-the-art overview of assessment in the field of positive psychology, including a comprehensive survey of current theories, approaches, issues, and assessment instruments. In four sections, leading experts look at different conceptualizations of well-being and discuss specific traits, states, and behaviors. New directions in positive psychology are also explored, including measuring primal world beliefs, imagination, self-transcendent experiences, and nostalgia. Each chapter provides an introductory background to the positive psychology topic reviews the most relevant assessment instruments, and discusses the specific assessment-related challenges. Recommendations for selecting assessment tools are included for specific settings, such as school, relationships, health and clinical settings, leisure, and interventions. This book is a must for positive psychology researchers, instructors, students, and practitioners wanting to select the right positive psychology instrument for the right situation.

A Journey to Paris Routledge

With his passion for smooth surfaces, fine lines, and spatial plans, Adolf Loos was a prophet of 20th-century architecture. This essential introduction explores his rejection of ornamental forms and his radical pursuit of stark, bold, and beautiful design.

Understanding the Beauty Appreciation Trait Pier 9

This 1940 book by Charles S. Myers, Consulting Psychologist to the British Armies in the First World War, explains his work on shell shock.

Algebraic Methods in Graph Theory National Geographic Books

Integer Program~ing is one of the most fascinating and difficult areas in the field of Mathematical Optimization. Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications. Since these publications are scattered over many journals, proceedings volumes, monographs, and working papers, a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field. I initiated this compilation of literature in 1970 at the Institut für ~konometrie und Operations Research, University of Bonn. Since then many collaborators have contributed to and worked on it. Among them Dipl.-Math. Claus Kastning has done the bulk of the work. With great perseverance and diligence he has gathered all the material and checked it with the original sources. The main aim was to incorporate rare and not easily accessible sources like Russian journals, preprints or unpublished papers. Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version. For this reason he must be considered its responsible editor. As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete. We have however tried to be as complete as possible. The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries.

15th-18th Century French Drawings in the Metropolitan Museum of Art Legare Street Press

Life is an ongoing struggle for patients who have been chronically traumatized. They typically have a wide array of symptoms, often classified under different combinations of comorbidity, which can make assessment and treatment complicated and confusing for the therapist. Many patients have substantial problems with daily living and relationships, including serious intrapsychic conflicts and maladaptive coping strategies. Their suffering essentially relates to a terrifying and painful past that haunts them. Even when survivors attempt to hide their distress beneath a facade of normality—a common strategy—therapists often feel besieged by their many symptoms and serious pain. Small wonder that many survivors of chronic traumatization have seen several therapists with little if any gains, and that quite a few have been labeled as untreatable or resistant. In this book, three leading researchers and clinicians share what they have learned from treating and studying chronically traumatized individuals across more than 65 years of collective experience. Based on the theory of structural dissociation of the personality in combination with a Janetian psychology of action, the authors have developed a model of phase-oriented treatment that focuses on the identification and treatment of structural dissociation and related maladaptive mental and behavioral actions. The foundation of this approach is to support patients in learning more effective mental and behavioral actions that will enable them to become more adaptive in life and to resolve their structural dissociation. This principle implies an overall therapeutic goal of raising the integrative capacity, in order to cope with the demands of daily life and deal with the haunting remnants of the past, with the “unfinished business” of traumatic memories. Of interest to clinicians, students of clinical psychology and psychiatry, as well as to researchers, all those interested in adult survivors of chronic child abuse and neglect will find helpful insights and tools that may make the treatment more effective and efficient, and more tolerable for the suffering patient.

Treaty Series Trentham Books Limited

Creative Collaboration in Teaching focuses on the question of how best to facilitate creative collaboration among students in the classroom setting—with a focus on music composition and from the perspective of social-cultural psychology. This book is comprehensive, cutting-edge and scholarly in its approach. Marcelo Giglio's attention to music and creativity is detailed enough to satisfy any researcher, educator or teacher educator; but at the same time, his research approach, classroom observations and overriding recommendations can be easily applied to a wide range of subject areas. Giglio combines a rigorous review of the relevant literatures on creativity and social interactions with the reporting and analysis of his own original data across the world, and then goes on to support this important work with detailed descriptions of classroom episodes—student-to-student and teacher-to-student interactions. By combining these three elements, this book offers socio-creative and pedagogical models for education in practice as well as teacher education and research.

Pink Böhlau Verlag Köln Weimar

Several current linguistic approaches converge in rejecting the wide-spread idea that language is an autonomous system, i.e. that it is structured independently from the outside world and the natural equipment of language users. Around the world, semiotically biased linguistics (functionalism,

naturalism, etc.) takes this position, which differentiates it very clearly from generative linguistics. One of the basic assumptions of such approaches is that language structure includes some non-arbitrary aspects, from the phonological through the textual level, and a great amount of research has occurred in the last decade regarding the "iconic aspects" of language(s). This volume focuses on generally neglected dimensions of language and

semiotic activity, featuring contributions by philosophers, linguists, semioticians, and psychologists. After tracing the tradition of iconicity in the history of linguistic thought, the central section is devoted to specific analyses emphasizing the role of non-arbitrary phenomena in language foundation and linguistic structure. Specifically discussed are numeration systems, the gestural systems of communication among deaf people, the genesis of writing in children, and inter-ethnic communication.
