 Trauma surgery has increasingly become a specialized field inspired by different principles and philosophy. A good trauma surgeon is a surgeon who knows how to perform abdominal vascular, thoracic, urologic, gynecologic, and orthopaedic procedures and is able to repair multiple traumatic injuries in the best sequence possible. In this first volume, practical, up-to-date guidance is provided on the optimal critical care and ICU management of trauma patients. In addition, individual chapters focus on specific injuries in orthopaedic trauma (and especially spinal trauma) and neurotrauma, with the aim of providing a fresh view of the surgical approach and practical suggestions for improving the skills of treating surgeons. Educational issues and the organization of a trauma center are also covered. The volume will be a handy pocket guide for trainee surgeons and any surgeon, physician, or nurse who treats trauma patients. It will be particularly relevant for emergency department physicians, critical care and ICU doctors, orthopaedic surgeons, neurosurgeons, and professionals responsible for trauma care and decision making, programs of trauma education, or organization of a trauma center. Also available: *Trauma Surgery Vol. 2: Thoracic and Abdominal Trauma*

As nurses know firsthand, the impact of psychological trauma is not limited to those who experience it. Others—including nurses and caregivers—are indirectly affected. In healthcare, patients' psychological trauma may manifest in odd, uncomfortable, or confusing behaviors. Nurses and healthcare workers must recognize that patients may be feeling unsafe or struggling with low self-esteem, anxiety, grief, loneliness, or depression born from trauma. As nurses listen to, empathize with, and sometimes grieve with the people they care for, they need to comprehend the "why" behind these feelings and actions. The *Influence of Psychological Trauma in Nursing* helps nurses gain awareness and knowledge about trauma and recovery so they can heal and bring holistic healing to others. Authors Karen J. Foli and John R. Thompson provide a primer on psychological trauma, helping readers identify and understand the common forms of trauma in society. Filled with examples, tools, assessments, and learning objectives, this book helps nurses move forward as trauma-informed caregivers.

*Local Planning for Terror and Disaster* gives voice to experts in key fields involved with local preparedness, assessing the quality of preparedness in each field, and offering directions for improvement. Introductory chapters provide overviews of terror medicine, security and communications, which are indispensable to successful preparedness, while subsequent chapters concentrate on a particular field and how responders from that field communicate and interact with others during and after an event. Thus, a chapter by a physician discusses not only the doctor's role but how that role is, or should be, coordinated with emergency medical technicians and police. Similarly, chapters by law enforcement figures also review police responsibilities and interactions with nurses, EMTs, volunteers and other relevant responders. Developed from topics at recent Symposia on Terror Medicine and Security, *Local Planning* also encompasses aspects of emergency and disaster medicine, as well as techniques for diagnosis, rescue, coordination and security that are distinctive to a terrorist attack. Each chapter also includes a case study that demonstrates preparedness, or lack thereof, for a real or hypothetical event, including lessons learned, next steps, and areas for improvement in this global era which increasingly calls for preparedness at a local level.

The United States Military Joint Trauma System Assessment: A Report Commissioned by the US Central Command Surgeon Sponsored by Air Force Central Command A Strategic Document to Provide a Platform for Tactical Development (2018) INTRODUCTION This current set of medical guidelines has gone through some significant improvements since the original release in 2014 and were developed through a collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, Committee of En Route Combat

Casualty Care and the Committee of Tactical Combat Casualty Care. Our shared goal is to ensure excellent en route care that is standard across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. The CCFP Program Office facilitates appropriate training and medical education to the CCFP providers. The CCFP program of instruction ensures the appropriate skills and knowledge required for CCFPs to apply these medical guidelines during aeromedical evacuation. Unit medical trainers and medical directors should evaluate CCFPs ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide Critical Care Flight Paramedics (CCFP) and prehospital professionals in the response and management of emergencies and the care and treatment of patients in both garrison and theater of war environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers.
