A spunky cowgirl finds
herself in a mess of
trouble and is forced to

strike a deal with a
horned toad in this
hilarious spin on a
classic fairy tale. Reba
Jo loves riding all over
the wild prairie and
roping any critter
unlucky enough to
cross her path. But
when her luck turns
sour, she has to work
with a horned toad to
save her own hide.

Reba Jo tries her darnedest to weasel out of her part of the bargain, but the clever horned toad won't let her off the hook. In the end, she learns that a promise is a promise and words once spoken are not easily taken back. Jackie Mims Hopkins's sizzling southwestern retelling of the fairy tale "The Frog Prince" is complemented by Michael Austin's vibrant, distinctive illustrations, which colorfully transport young readers to the untamed, dusty prairie. WINNER of the Storytelling World Award!

Textbooks are symbols of centuries-old education. They're

often outdated as soon as they hit students' desks. Acting "by the textbook" implies compliance and a lack of creativity. It's time to ditch those textbooks--and those textbook assumptions about learning. In *Ditch That Textbook*, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. *Ditch That Textbook* is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.

Geographic Books Neuropsychological and psychological evaluations in school settings are often rich in detail about a child's cognitive, academic and emotional functions, and come with specific recommendations to support the child's performance in school. However, there is often a gap between the assessment results and the implementation of the recommendations, since learning specialists and teachers frequently do not have the means to both interpret and implement the recommendations. This manual presents clear and specific guidelines for school counselors and teachers to decode and put into practice evaluation findings. The book begins by

describing various functional domains that are assessed in a neuropsychological evaluation, and then notes how to recognize behavior and learning styles impacted by difficulty in one of more of the domains. Furthermore, it outlines activities that could be used in the classroom or other environments to support a child's weaknesses, develop new skills, or appear to particular strengths. Finally, ready-to-use worksheets and activities are offered. This is an essential tool for school psychologists, special education teachers, and learning specialists and counselors. Joanna Scott's

unparalleled gift for storytelling has inspired hyperbole from critics and her devoted fanbase, which includes some of the most preeminent writers of our time. But not since Various Antidotes, a finalist for the PEN/Faulkner Award, has she turned her talents toward short stories. At the seaside wedding of two lovers kept apart by the caprices of fate, a doting uncle looks on while his errant brother, father of the bride, struggles to free himself from a locked bathroom across town. A young woman arrives in Jazz Age New York with stars in her eyes and a few coins in her pocket and after a string of failed jobs, she thinks she's found salvation in a romance with her boss at a local

greasy spoon but learns that her idea of herself and others' ideas of her are quite different. A bright business man seems content with all the trappings his good fortune affords, until a flat tire and a chance encounter with a couple of mechanics in the country upsets his entire view. Here Joanna Scott offers a group of tales that celebrate her acknowledged sense of character, plot and her gift for capturing the breathtaking tension even in life's quietest moments.

Cue Prentice Hall The majority of professors have never had a formal course in education, and the most common method for learning how to teach is on-the-job training. This represents a challenge for disciplines with ever more complex subject matter, and a lost opportunity when new active learning approaches to education are yielding dramatic improvements in student learning and

retention. This book aims to cover all aspects of teaching engineering and other technical subjects. It presents both practical matters and educational theories in a format useful for both new and experienced teachers. It is organized to start with specific, practical teaching applications and then leads to psychological and educational theories. The "practical orientation" section explains how to develop objectives and then use them to enhance student learning, and the "theoretical orientation" section discusses the theoretical basis for learning/teaching and its impact on students. Written mainly for PhD students and

professors in all areas of engineering, the book may be used as a text for graduate-level classes and professional workshops or by professionals who wish to read it on their own. Although the focus is engineering education, most of this book will be useful to teachers in other disciplines. Teaching is a complex human activity, so it is impossible to develop a formula that guarantees it will be excellent. However, the methods in this book will help all professors become good teachers while spending less time preparing for the classroom. This is a new edition of the well-received volume published by McGraw-Hill in 1993. It includes an entirely revised

section on the Accreditation Board for Engineering and Technology (ABET) and new sections on the characteristics of great teachers, different active learning methods, the application of technology in the classroom (from clickers to intelligent tutorial systems), and how people learn.
