Princeton Review

Pathology of Wildlife and Zoo Animals is a comprehensive resource that covers the pathology of wildlife and zoo species, including a wide scope of animals, disease types and geographic regions. It is the definitive book for students, biologists, scientists, physicians, veterinary clinicians and pathologists working with non-domestic species in a variety of settings. General chapters include information on performing necropsies, proper techniques to meet the specialized needs of forensic cases, laboratory diagnostics, and an introduction into basic principles of comparative clinical pathology. The taxon-based chapters provide information about disease in related groups of animals and include descriptions of gross and histologic lesions, pathogenesis and diagnostics. For each group of animals, notable, unique gross and microscopic anatomical features are provided to further assist the reader in deciding whether differences from the domestic animal paradigm are “normal.” Additional online content, which includes text, images, and whole

scanned glass slides of selected conditions, expands the published material resulting in a comprehensive approach to the topic. 2019 PROSE Awards - Winner: Category: Textbook/Biological and Life Sciences: Association of American Publishers Presents a single resource for performing necropsies on a variety of taxa, including terrestrial and aquatic vertebrates and invertebrates Describes notable, unique gross and microscopic anatomical variations among species/taxa to assist in understanding normal features, in particular those that can be mistaken as being abnormal Provides consistent organization of chapters with descriptions of unique anatomic features, common non-infectious and infectious diseases following brief overviews of the taxonomic group Contains full-color, high quality illustrations of diseases Links to a large online library of scanned slides related to topics in the book that illustrate important histologic findings

Introduction to Environmental Science

Simon and Schuster Lab investigations are an important part of the AP Environmental Science course. Given the 25 labs expected by the College Board and the number of students taking the class, this project sought to evaluate the increase in student understanding of environmental lab concepts from alternative debriefing methods used instead of lab reports. Four classes used different methods - use of preview materials before the lab, small group whiteboard presentations about a specific part of

the lab experience, class discussion after the lab, and no treatment - to process the same lab experience rather than doing lab reports. After the treatment, students took a quiz over the lab content. Scores on the quiz were compared to determine from which treatment students better understood the associated concepts. The treatment methods rotated between classes so that each class used each of the approaches three times. Students in the class using the whiteboards had the highest class-average seven of the twelve times and were ranked second for another three trials. A possible reason for the effectiveness of the whiteboard is the small group discussion may increase the mental stimulation necessary for learning and memory. *Friedland and Relyea Environmental Science for AP** Simon and Schuster *Friedland/Relyea Environmental Science for AP** was specifically developed to meet the requirements of the AP Environmental Science course and the needs of its students and teachers. This highly anticipated new textbook explores the science behind environmental science

and involves students with the fundamental concepts and findings that inform environmental decision making at all levels—from personal choices to national and international policy. This site will be the source for periodic updates on this exciting project as it draws closer to publication.
