The only way to learn is to practice! In *Machine Learning Bookcamp*, you'll create and deploy Python-based machine learning models for a variety of increasingly challenging projects. Taking you from the basics of machine learning to complex applications such as image and text analysis, each new project builds on what you've learned in previous chapters. By the end of the bookcamp, you'll have built a portfolio of business-relevant machine learning projects that hiring managers will be excited to see. about the technology Machine learning is an analysis technique for predicting trends and

relationships based on historical data. As ML has matured as a discipline, an established set of algorithms has emerged for tackling a wide range of analysis tasks in business and research. By practicing the most important algorithms and techniques, you can quickly gain a footing in this important area. Luckily, that's exactly what you'll be doing in *Machine Learning Bookcamp*. about the book In *Machine Learning Bookcamp* you'll learn the essentials of machine learning by completing a carefully designed set of real-world projects. Beginning as a novice, you'll start with the basic concepts of ML before tackling your first challenge: creating a car price predictor using linear regression algorithms. You'll then advance through increasingly difficult projects, developing your skills to build a churn prediction application, a flight delay calculator, an image classifier, and more. When you're done working through these fun and informative projects, you'll have a comprehensive machine learning skill set you can apply to practical on-the-job problems. what's inside Code fundamental ML algorithms from scratch Collect and clean data for training models Use popular Python tools, including NumPy, Pandas, Scikit-Learn, and TensorFlow Apply ML to complex datasets with images and text Deploy ML models to a production-ready environment about the reader For readers with existing programming skills. No previous machine learning experience required. about the author Alexey Grigorev has more than ten years of experience as a software engineer, and has spent the last six years focused on machine learning. Currently, he works as a lead data scientist at the OLX Group, where he deals with content moderation and image models. He is the author of two other books on using Java for data science and TensorFlow for deep learning. [Guidance for Preparing Standard Operating Procedures \(SOPs\)](#). CRC Press

A perennial bestseller, this third edition includes individual entries for over 300 compounds. The extensive list of references has been updated and includes entries for 15 pesticides commonly used in greenhouses. Emphasis is placed on disposal methods that turn hazardous waste material into non-toxic products. These methods fall into several categories, including acid/base neutralization, oxidation or reduction, and precipitation of toxic ions as insoluble solids. The text also provides data on hazardous reactions of chemicals, assisting laboratory managers in developing a plan of action for emergencies such as the spill of any of the chemicals listed.

Communication is a critical yet often overlooked part of data science. Communicating with Data aims to help students and researchers write about their insights in a way that is both compelling and faithful to the data. General advice on science writing is also provided, including how to distill findings into a story and organize and revise the story, and how to write clearly, concisely, and precisely. This is an excellent resource for students who want to learn how to write about scientific findings, and for instructors who are teaching a science course in communication or a course with a writing component. Communicating with Data consists of five parts. Part I helps the novice learn to write by reading the work of others. Part II delves into the specifics of how to describe data at a level appropriate for publication, create informative and effective visualizations, and communicate an analysis pipeline through well-written, reproducible code. Part III demonstrates how to reduce a data analysis to a compelling story and organize and write the first draft of a technical paper. Part IV addresses revision; this includes advice on writing about statistical findings in a clear and accurate way, general writing advice, and strategies for proof reading and revising. Part V offers advice about communication strategies beyond the page, which include giving talks, building a professional network, and participating in online communities. This book also provides 22 portfolio prompts that extend the guidance and examples in the earlier parts of the book and help writers build their portfolio of data communication.

The Condition Assessment Scheme (CAS) for oil tankers was adopted in 2001 and is applicable to all single-hull tankers of 15 years or older. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.--Publisher's description.

This book contains all the guidelines needed to help you write an advertisement resume that will get you interviews and a job. It promotes writing results work statements rather than task and responsibility statements. Key features include how to write 1. your heading in relation to space available, 2. targeted objectives, 3. work statements that use key words and still describe how good you are, 4. skill sections that show your level of ability, and 5. activities that show your chemistry. Make Your Resume Talk is written in sections to help you build or re-write your resume and help you tailor your resume to specific jobs. Many "before and after" resumes with individual critiques on different occupations are included to show how to write statements that get attention of potential employers. Helpful tips are provided throughout the book to highlight critical information for writing a resume that will talk for you. Chapters are provided to cover all aspects of the resume plus special chapters on electronic resumes, help for high school/college students, and the physical attributes of resumes. Effective cover letter guidelines with examples are provided as a bonus. Personal testimonials are scattered through the book to show you how the guidelines helped other users. The success of his approach is shown by this quote from a Senior Corporate Recruiter from Red Hat which stated, "As a corporate recruiter, I view hundreds of resumes daily filed with buzz words, tasks and objectives that don't meet the candidate's background. These resumes are quickly eliminated. The resumes that follow the guidelines outlined in Dick Hart's book that show the depth of the candidate's ability and how well the buzz words apply to their accomplishments are the ones we seriously consider. Diligent applicants need to follow his advice and list solid achievements from past/current performance."
